27 Glossary 96

1 Getting started

Baybex Restaurant is a complete business system for restaurants, cafés, fast-food shops, bakeries, cloud kitchens and multi-branch chains. Everything runs in a web browser — there is nothing to install. This chapter shows you how to create your account, log in, and find your way around.

1.1 What is included

Your subscription is **one package with every feature**. There are no add-ons to buy and no limits on branches, staff, products or orders.

- **POS & billing** — dine-in, takeaway, delivery, drive-thru
- **Kitchen display** with stations and timers
- **Tables & floor plan** with table QR codes
- **QR menu, online ordering & kiosk**
- **Delivery** — zones, riders, cash collection
- **Reservations** and waitlist
- **Cash shifts** and drawer control
- **Menu** — variants, add-ons, happy hour, branch prices
- **Inventory** with automatic stock deduction
- **Recipes & food cost**
- **Purchases & suppliers**
- **Customers, loyalty points & coupons**
- **Staff** — logins, attendance, payroll
- **Accounting** — P&L, cashbook, VAT
- **27 reports** and a live dashboard
- **Multi-branch** management

1.2 What you need

ITEM	RECOMMENDATION
Device	Any PC, laptop, tablet or smartphone. For the POS counter a laptop/PC or a 10-inch or bigger tablet works best. For the kitchen display, any screen or TV with a browser.
Browser	Google Chrome (recommended), Microsoft Edge, Firefox or Safari — kept up to date.
Internet	Any broadband or mobile data connection. If the internet drops at the counter, the POS can still take payments (see *Offline billing*).
Receipt printer	Any 80 mm or 58 mm thermal receipt printer installed on the computer. Receipts are printed through the browser's print window.
Barcode scanner (optional)	Any USB scanner that types like a keyboard.
Second screen (optional)	For the customer-facing display at the counter.

1.3 Create your restaurant account

If your account was created for you by Baybex, skip this step — you will receive your **Restaurant ID**, username and password.

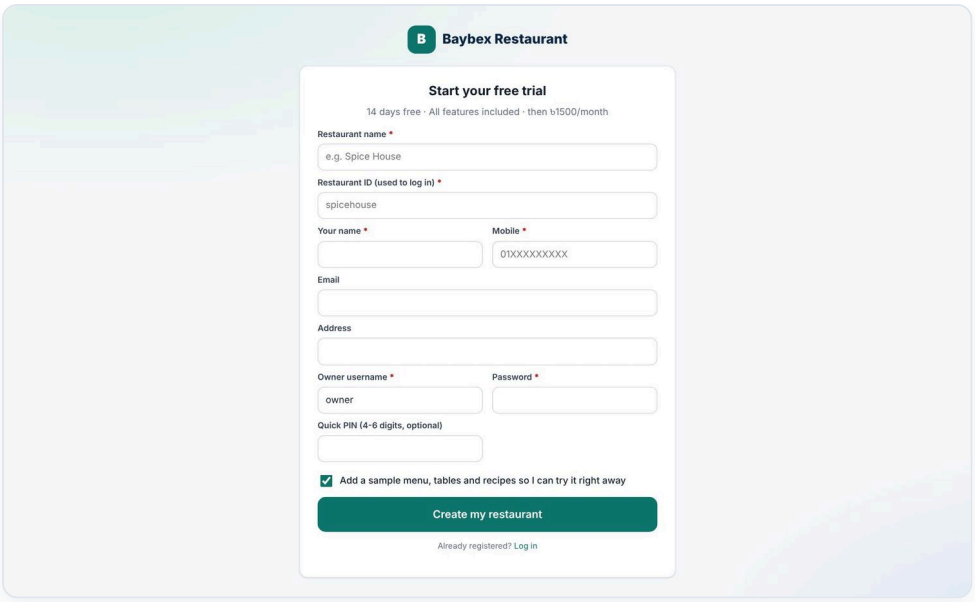

Figure 1 — The sign-up page

1. Open the Baybex website and click **Start free trial**.
2. Enter your **Restaurant name**. A **Restaurant ID** is suggested automatically — you can change it. A green tick shows it is available. Your staff will type this ID every time they log in, so keep it short and simple (for example `dhakaspice`).
3. Enter your name, mobile number, email and address.
4. Choose the **owner username** (default `owner`) and a **password** of at least 6 characters.
5. Optionally choose a 4–6 digit **Quick PIN** for fast login and for approving staff actions.
6. Keep **"Add a sample menu, tables and recipes"** ticked if you want to try the system with example data. You can edit or delete the samples later.
7. Click **Create my restaurant**. You are logged in straight away and your free trial starts.

1.4 Logging in

Every person logs in at **your-baybex-address/login**. There are two ways to log in:

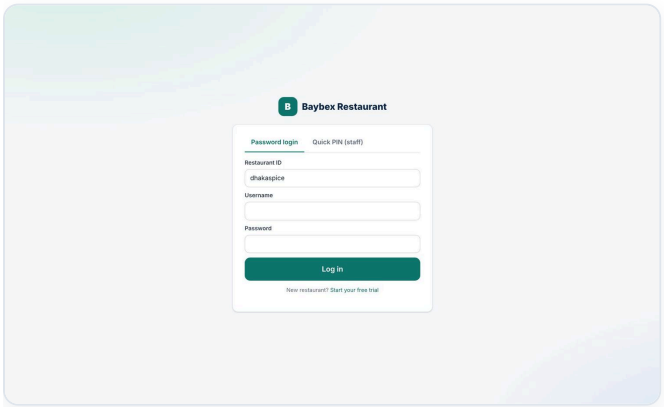

Figure 2 — Password login

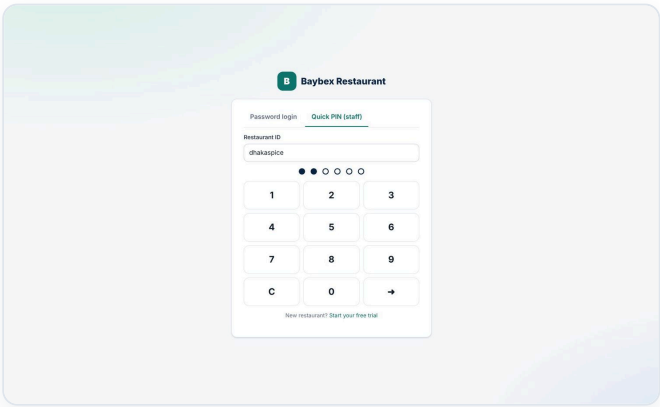

Figure 3 — Quick PIN login for staff

Password login

1. Type your **Restaurant ID** (it is remembered on that device after the first login).

2. Type your **username** and **password**.
3. Click **Log in**.

Quick PIN login

Busy staff can log in with only their PIN. Select **Quick PIN (staff)**, enter the Restaurant ID, tap the 4–6 digit PIN on the keypad (or type it on the keyboard) and press ➜. Each PIN belongs to exactly one person, so the system always knows who is working.

> ⚠️ After 10 wrong attempts from the same device, login is blocked for 10 minutes to protect your account. Wait, then try again — or ask the owner to reset the password.

> ℹ️ A login stays active for 30 days on that device. Use **Lock / switch user** (see below) on shared counter computers so each person works under their own name.

1.5 First-time setup checklist

Right after sign-up you will see the Welcome page. Work through these steps once:

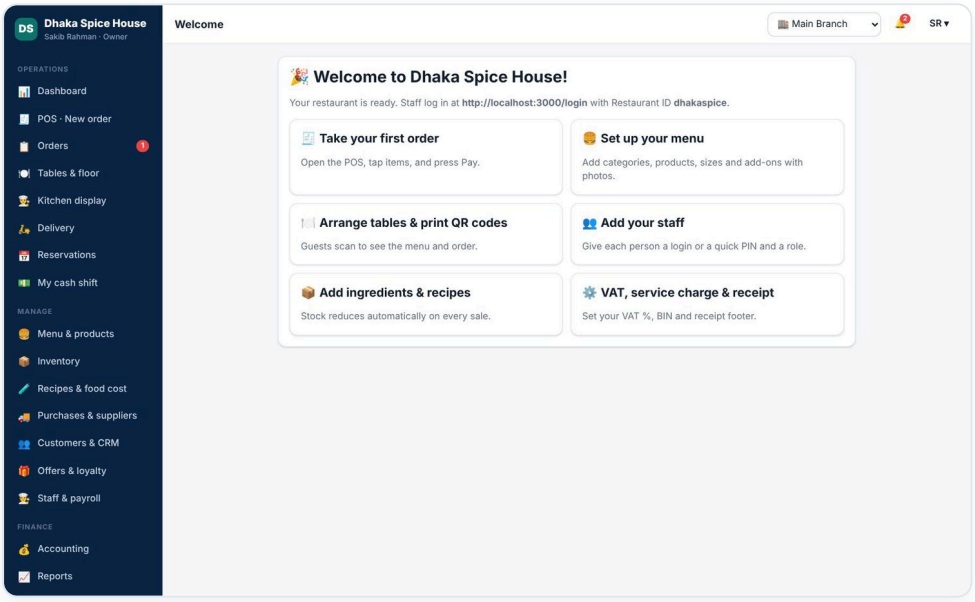

Figure 4 — Welcome page with the setup checklist

#	TASK	WHERE
1	Restaurant details, logo, VAT %, service charge, receipt text	Settings → Restaurant / VAT, charges & payments / Receipt
2	Menu categories and products with prices	Menu & products
3	Floors and tables; print table QR codes	Tables & floor → Tables setup / QR codes
4	Staff logins, roles and PINs	Settings → Staff logins / Roles & permissions

5	Ingredients, opening stock and recipes (for automatic stock and food cost)	Inventory, Recipes & food cost
6	Delivery zones and riders (if you deliver)	Delivery → Zones / Riders
7	Suppliers and expense categories	Purchases & suppliers, Accounting
8	Take a test order and print a receipt	POS · New order

1.6 The screen layout

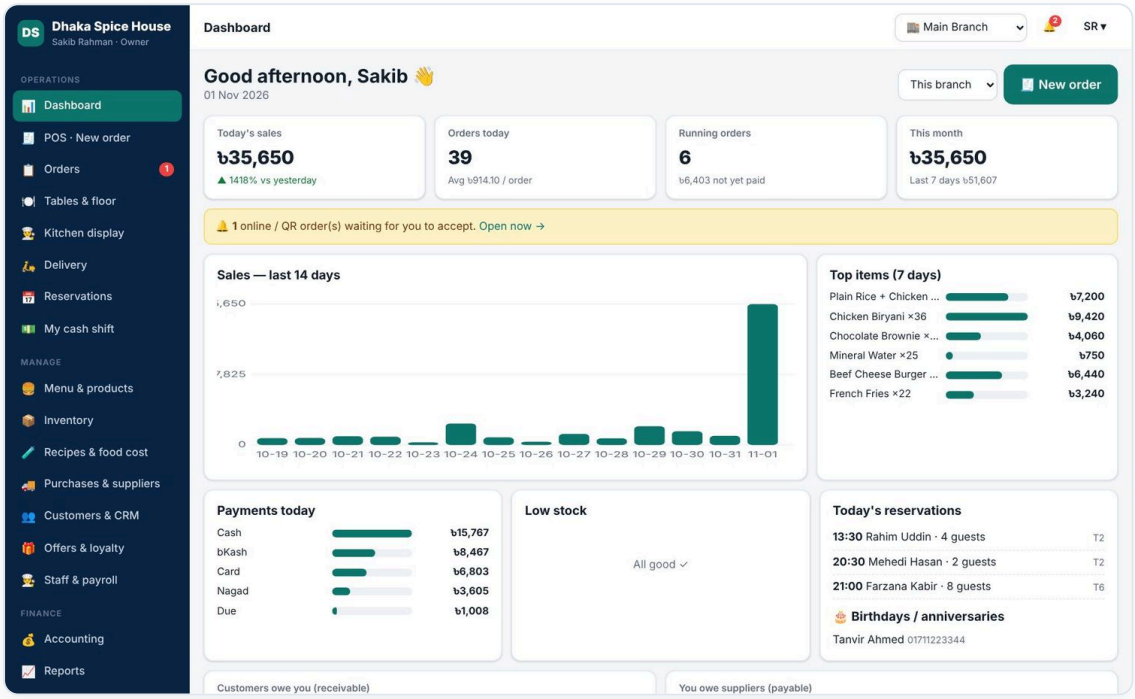

Figure 5 — Main screen: sidebar menu (left), top bar, and the page area

PART	WHAT IT DOES
Sidebar (left)	All modules, grouped as **Operations**, **Manage**, **Finance** and **Setup**. Each person only sees the modules their role allows. On phones and small tablets tap ☰ to open it.
Red counter on Orders	Number of online / QR orders waiting for you to accept.
Branch selector	Switch the branch you are working in. Staff who are locked to one branch cannot change it.
Bell 🔔	Notifications with an unread counter (new online orders, ready orders, low stock, feedback, billing).
Your initials ▾	Your account menu.
Coloured banners	Shown above the page for trial/subscription reminders and announcements from Baybex.

Figure 6 — Branch selector

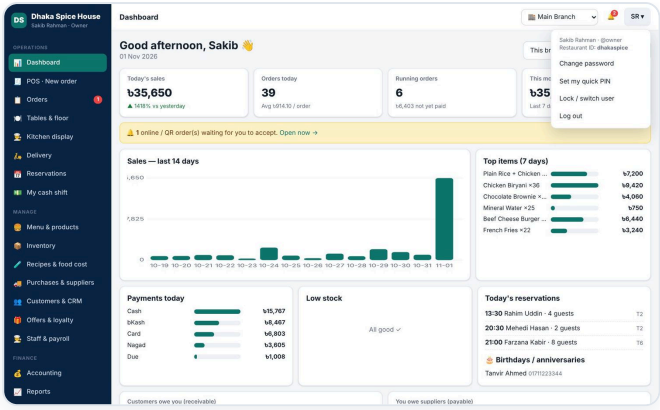

Figure 7 — Account menu

1.7 Your account menu

- **Change password** — enter your current password and a new one (6+ characters). Other devices logged in with your account are logged out.
- **Set my quick PIN** — choose a 4–6 digit PIN. It must be different from every other staff member's PIN.
- **Lock / switch user** — logs you out and opens the login page with the Restaurant ID already filled, so the next person can log in with their PIN.
- **Log out** — ends your session on this device.

The menu also shows your username and your **Restaurant ID**.

1.8 Notifications

The system checks for new events every few seconds. New events appear as a pop-up message at the bottom right, important ones with a short beep, and are listed on the **Notifications** page (click the bell). Click a notification to jump to the related page. Use **Mark all as read** to clear the counter.

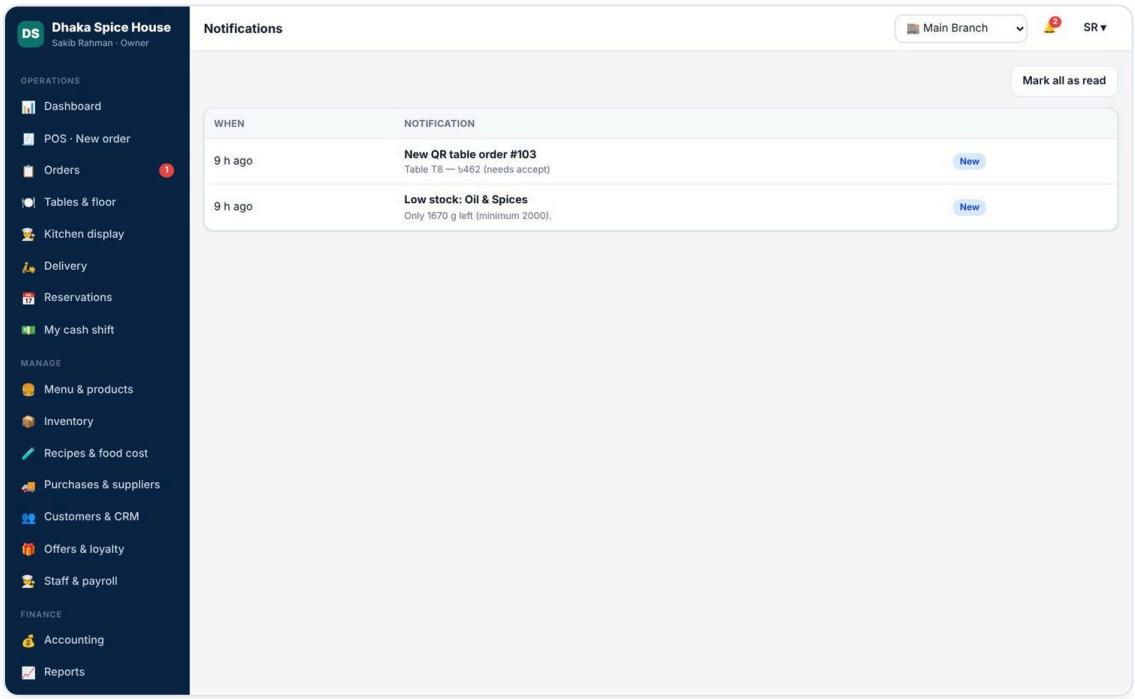

Figure 8 — Notifications page

NOTIFICATION	WHEN IT APPEARS
New QR / online / kiosk order	A guest places an order from the QR menu, online menu or kiosk.
Order #… is ready	The kitchen has marked every item of an order as ready — for waiters to serve or for pickup/delivery.
Low stock	An ingredient drops to or below its minimum stock level.
Stock received	Another branch transferred stock to your branch.
New feedback / complaint	A guest sends feedback from the online menu.
Payment approved / rejected	Your subscription payment was checked by Baybex.

2 Dashboard

The dashboard is the owner's and manager's home screen: today's business at a glance, updated every time you open it.

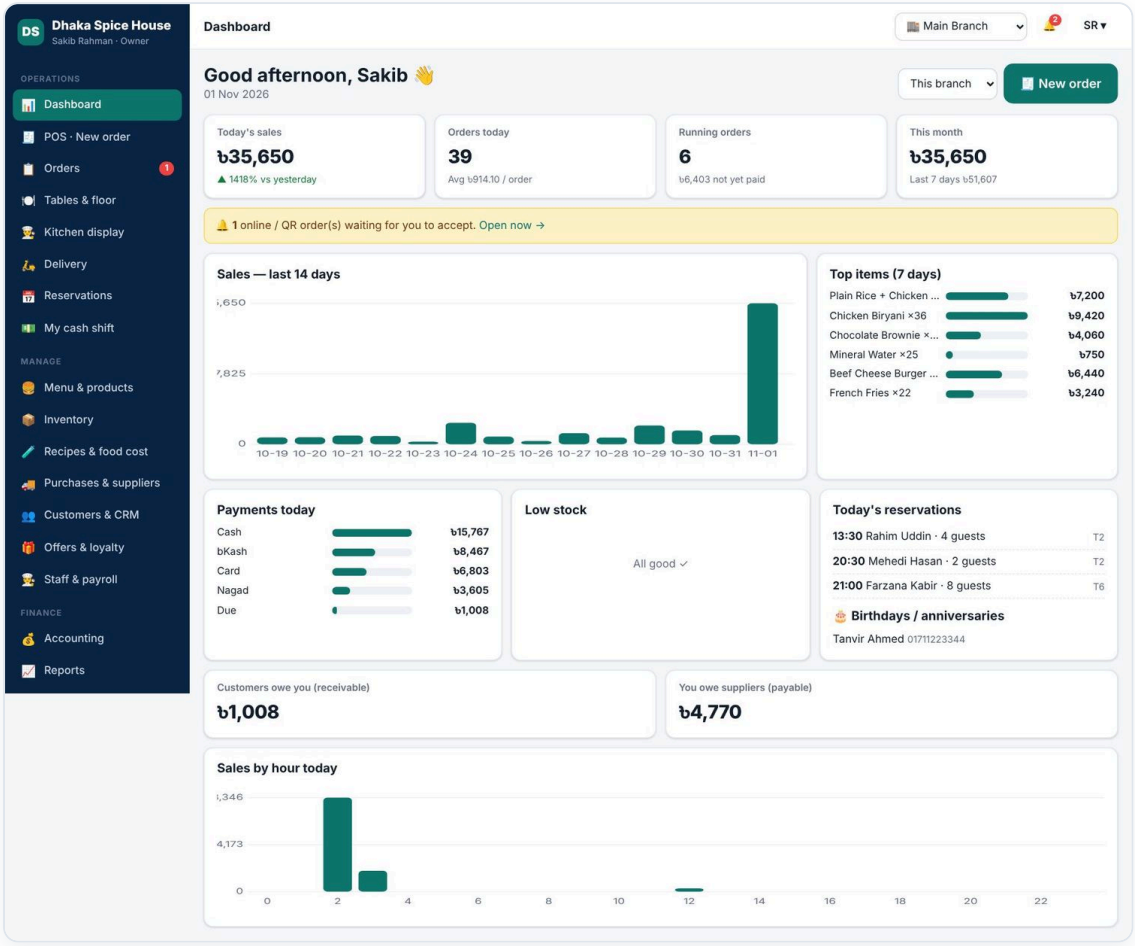

Figure 9 — The full dashboard

2.1 What the dashboard shows

CARD	MEANING
Today's sales	Total of completed (fully paid) orders today, and the change compared with yesterday.
Orders today	Number of completed orders and the average bill value.
Running orders	Orders that are open right now and the amount not yet paid.
This month	Sales since the 1st of the month, and the last 7 days.
Yellow alert	Online / QR orders waiting for you to accept — click *Open now*.
Sales — last 14 days	Daily sales chart. Hover over a bar to see the exact amount.
Top items (7 days)	Best-selling items by quantity and value.

Payments today	How much came in by Cash, bKash, Nagad, Card, etc.
Low stock	Ingredients at or below minimum, with a shortcut to create a purchase.
Today's reservations	Upcoming bookings with time, guests and table, plus customers with a birthday or anniversary today.
Receivable / payable	What customers owe you (due sales) and what you owe suppliers.
Sales by hour today	Shows your busy hours.

> 💡 With more than one branch, choose **All branches** at the top right of the dashboard to see the whole business together.

Staff without access to reports (for example cashiers, waiters and kitchen staff) are taken straight to their own work screen — POS, Kitchen display or Clock in — instead of the dashboard.

3 Staff logins, roles & permissions

Every person who uses the system should have their own login. Roles decide what each person can see and do, and every important action is recorded under that person's name.

3.1 Default roles

Six roles are created for you. You can change their permissions or create new roles at any time.

PERMISSION	OWNER	MANAGER	CASHIER	WAITER	KITCHEN	ACCOUNTANT
POS & billing	✓	✓	✓	✓	—	—
View orders	✓	✓	✓	✓	—	✓
Give discounts	✓	✓	✓	—	—	—
Void / cancel orders	✓	✓	—	—	—	—
Refunds	✓	✓	—	—	—	—
Cash shifts & drawer	✓	✓	✓	—	—	—
Tables & floor	✓	✓	✓	✓	—	—
Kitchen display	✓	✓	—	—	✓	—
Menu & products	✓	✓	—	—	—	—
Inventory & stock	✓	✓	—	—	—	—
Recipes & food cost	✓	✓	—	—	—	—
Purchases	✓	✓	—	—	—	✓
Suppliers	✓	✓	—	—	—	✓
Customers & feedback	✓	✓	✓	—	—	—
Offers & coupons	✓	✓	—	—	—	—
Delivery & riders	✓	✓	✓	—	—	—
Reservations	✓	✓	✓	✓	—	—
Staff, payroll & leaves	✓	✓	—	—	—	—
Clock in / out	✓	✓	✓	✓	✓	✓
Accounting	✓	—	—	—	—	✓
Reports	✓	✓	—	—	—	✓
Branches	✓	—	—	—	—	—
Settings, users & roles	✓	—	—	—	—	—

> ℹ️ The **Owner** role always has every permission and cannot be edited or deleted. Only an owner can create or edit another owner account, and the restaurant must always keep at least one active owner.

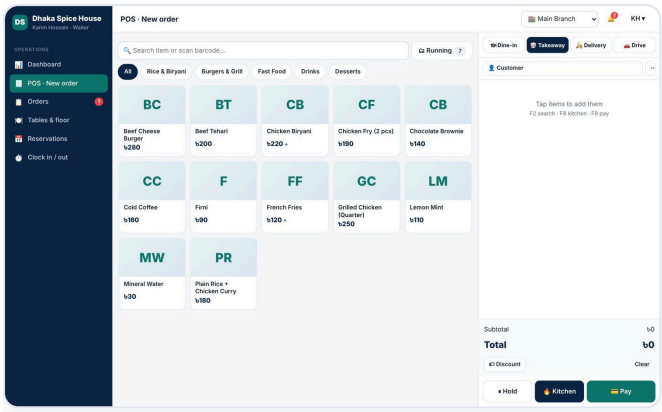

Figure 10 — What a waiter sees — only POS, Orders, Tables, Reservations and Clock in

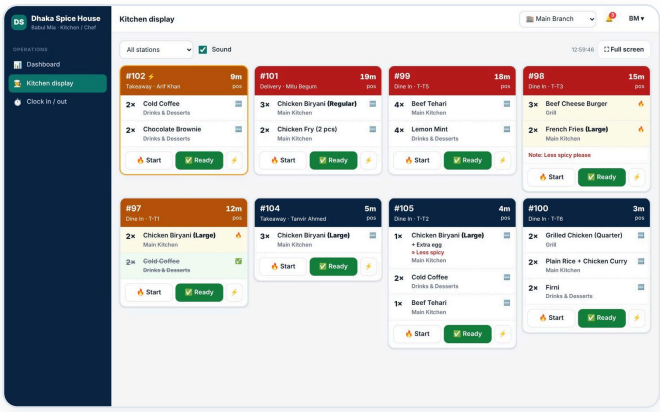

Figure 11 — What kitchen staff see — the Kitchen display

3.2 Add a staff login

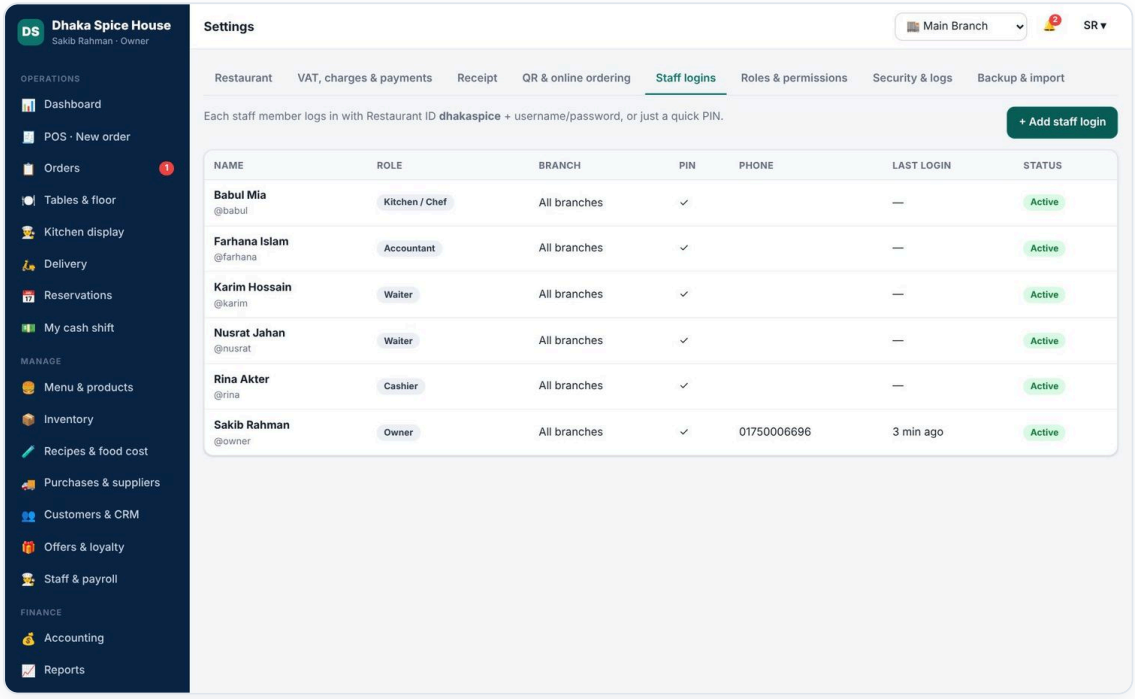

Figure 12 — Settings → Staff logins

1. Go to **Settings → Staff logins** and click **+ Add staff login**.
2. Enter **Full name** and a **Username** (letters, numbers, dot or underscore).
3. Choose the **Role**.
4. Choose a **Branch**, or leave *All branches*. A person locked to a branch can only work in and see that branch.
5. Set a **Password** (6+ characters) and/or a **Quick PIN** (4–6 digits). At least one is required.
6. Optionally add phone, designation, **monthly salary** (used in payroll), joining date and address.
7. Click **Save**. Give the person the Restaurant ID and their login details.

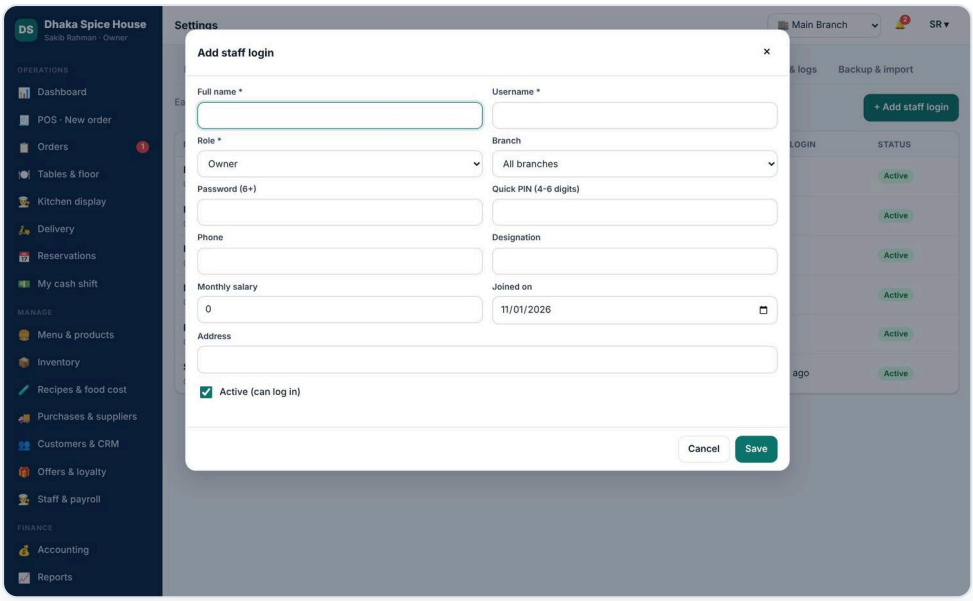

Figure 13 — Add staff login form

Edit, reset or disable a login

Click the person in the list. To reset their password or PIN, type a new one. Tick **Remove PIN** to delete their PIN. Untick **Active** to stop someone logging in (for example when they leave) — their history is kept and they are logged out of every device immediately.

3.3 Roles & permissions

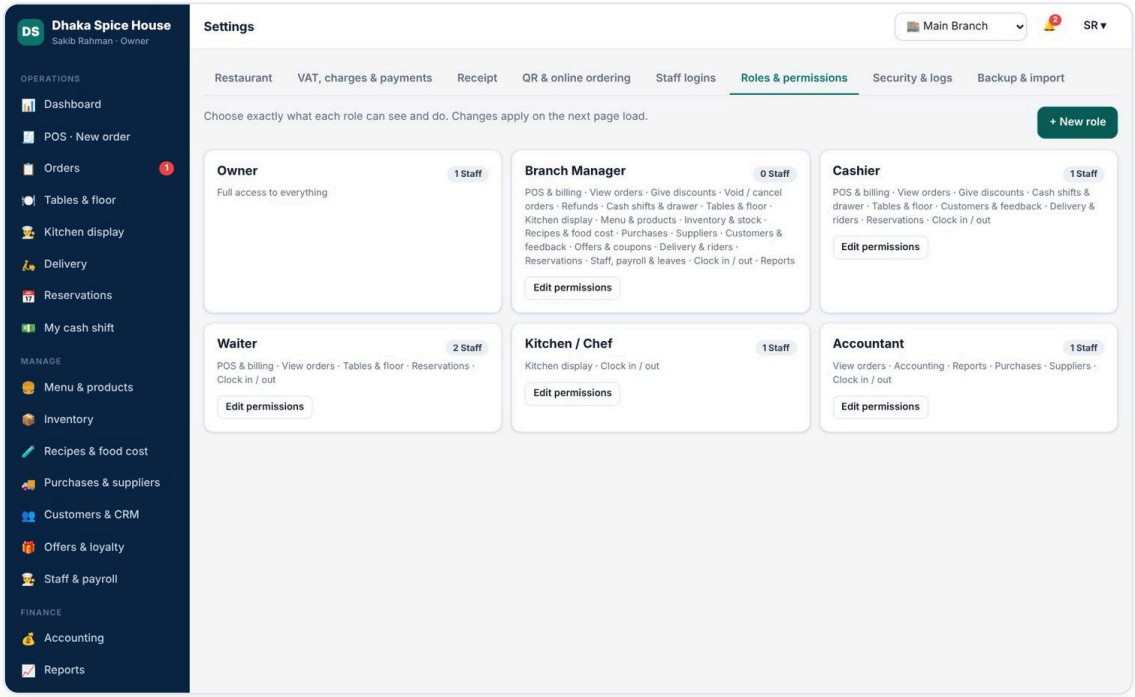

Figure 14 — Settings → Roles & permissions

Click **Edit permissions** on a role, or **+ New role** to create one (for example "Head Waiter" or "Store Keeper"). Tick the permissions the role should have and click **Save**. Staff see the change the next time a page loads. A role that still has staff cannot be deleted — move them to another role first.

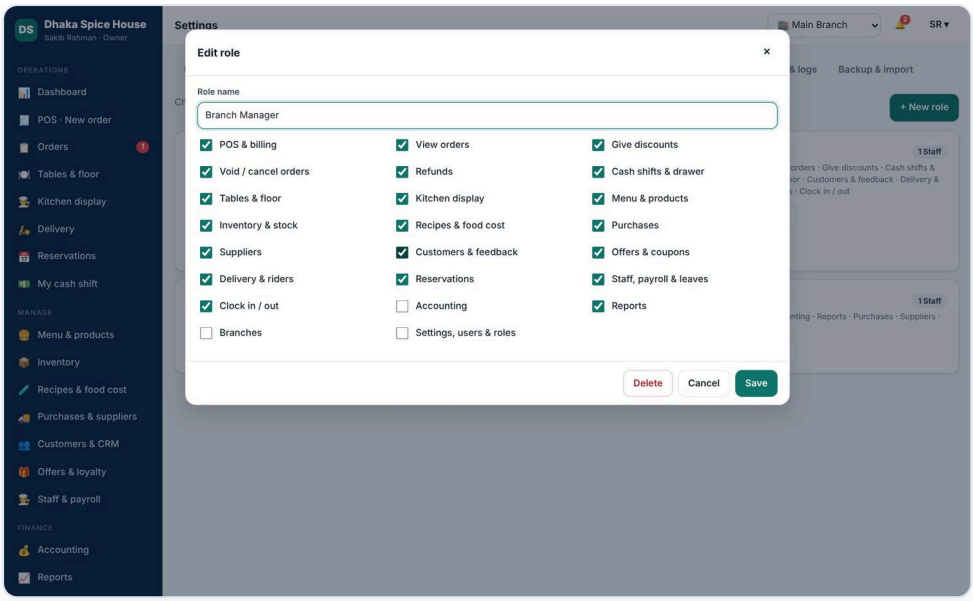

Figure 15 — Editing a role's permissions

3.4 Manager approval PIN

Sensitive actions are protected. When someone without permission tries to do one of them, a PIN pad appears. A manager (anyone whose role has that permission, or an owner) enters their own PIN on the same screen and the action goes through — no need to log out.

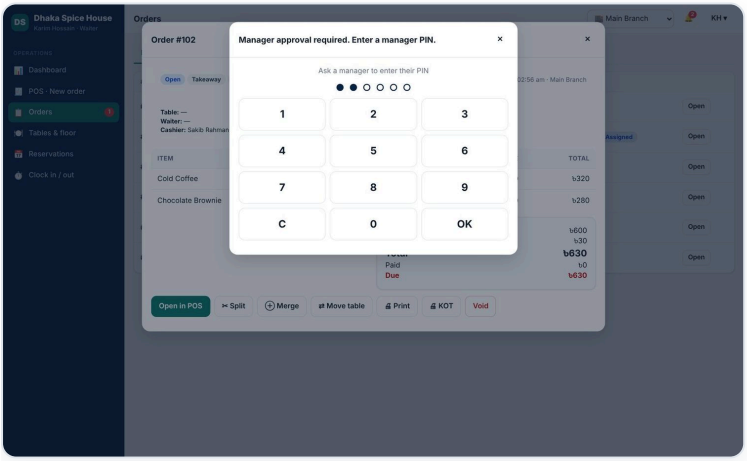

Figure 16 — Approval PIN pad

ACTION	NEEDS
Give an item or bill discount	Give discounts
Remove an item already sent to the kitchen	Void / cancel
Cancel / void an order	Void / cancel
Refund a paid order	Refunds

The approving manager's name is saved in the activity log with the action.

4 POS & billing

The POS (point of sale) is where orders are taken and paid. It is designed for speed: tap items, choose the order type, and press Pay. Open it from **POS · New order** in the sidebar.

> 💡 Cashiers should open a **cash shift** before taking payments (see the *Cash shift* chapter). If no shift is open, an orange **Open shift** button appears at the top of the POS.

4.1 The POS screen

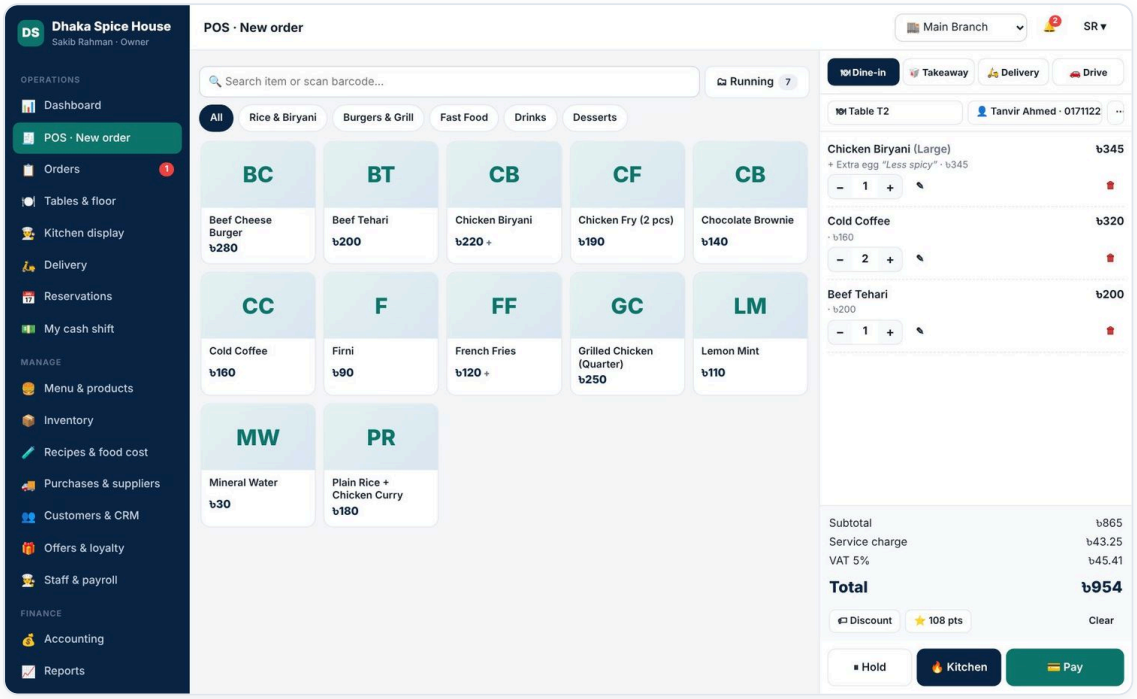

Figure 17 — POS with a dine-in order in the cart

AREA	USE
Search box	Type part of an item name or SKU, or scan a barcode and press **Enter** to add it directly.
🗂 Running	List of open, held and waiting orders with a counter. Click one to continue it.
Category chips	Filter the item grid by category. **All** shows everything.
Item tiles	Tap to add. A **+** after the price means the item has sizes or add-ons. HAPPY HOUR shows the happy-hour price is active. **N/A** means the item is switched off or outside its menu time (you can still add it after confirming).
Order type buttons	Dine-in, Takeaway, Delivery, Drive (drive-thru).
Table / Customer / Address / ⋯ More	Order details — see below.
Cart	Items with quantity buttons, edit ✎ and remove 🗑. Items already sent to the kitchen are marked • **sent**.

Totals	Subtotal, discount, service charge, VAT, delivery charge and the grand total. Buttons for 🏷 Discount, ⭐ loyalty points and Clear.
Hold / Kitchen / Pay	Save without sending, send to kitchen, or take payment.

4.2 Order types

TYPE	WHEN TO USE · WHAT IS REQUIRED
🍽 **Dine-in**	Guests eat at a table. You must choose a **table**. Service charge applies (if set). The table turns red (occupied) until the bill is paid.
🥡 **Takeaway**	Counter orders taken away. No table needed.
🛵 **Delivery**	Needs a **delivery address**; choose a **zone** to add the delivery charge automatically. Appears on the Delivery board.
🚗 **Drive**	Drive-thru / car pickup. Optionally record the **vehicle number**.

4.3 Take a dine-in order step by step

1. Tap **🍽 Dine-in**. The table picker opens — tap a green (free) table. If the table already has an open bill, you can add to that bill or start a separate one.
2. Tap items to add them. For items with sizes or add-ons, choose the options (see next section).
3. Optionally tap **👤 Customer** to attach a customer (for loyalty points, history and due).
4. Tap **🔥 Kitchen** to send the order to the kitchen. The cart clears so you can serve the next guest; the order stays on the table.
5. To add more items later, open the table again (from the POS table picker, the Tables page or 🗂 Running), add items and tap **🔥 Kitchen** again — only the new items go to the kitchen.
6. When the guest asks for the bill, open the order, tap **⋯ More** → **🖨 Print bill** to print an unpaid bill, then tap **💳 Pay**.

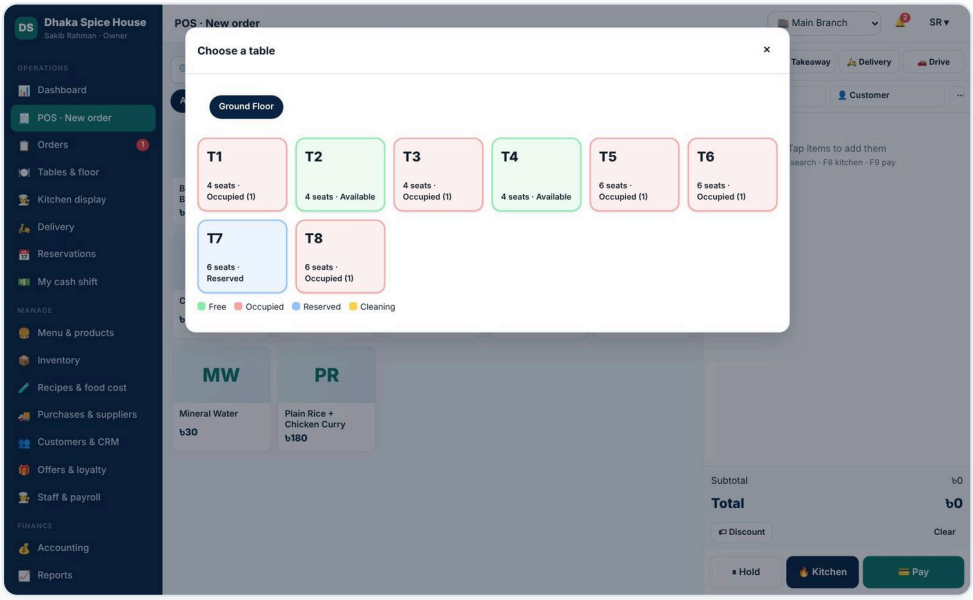

Figure 18 — Choosing a table — colours show free, occupied, reserved and cleaning tables

4.4 Sizes, add-ons, instructions and weight

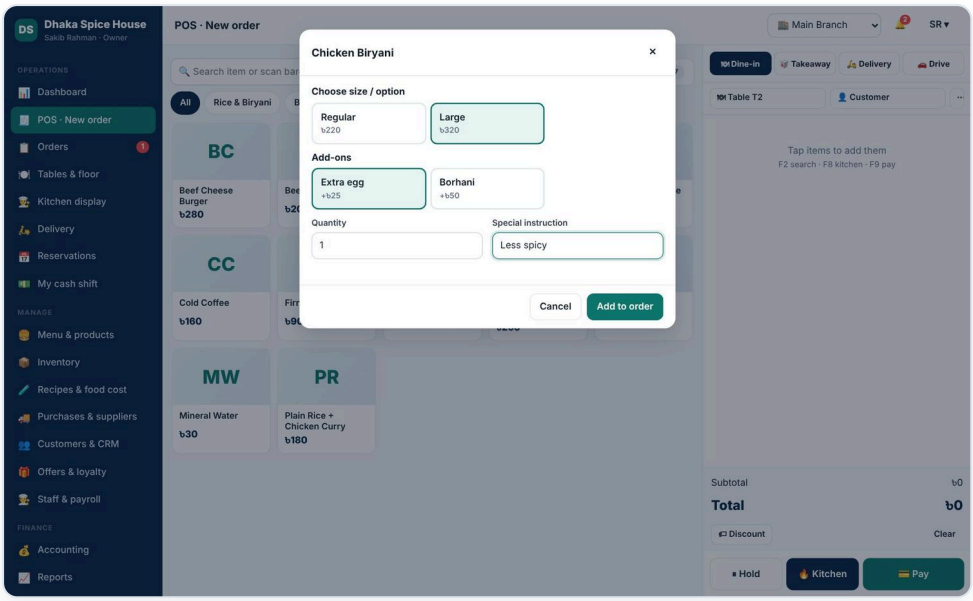

Figure 19 — Options window for an item with sizes and add-ons

- **Size / option** — choose one (for example Regular or Large). The price changes to that option's price.
- **Add-ons** — tap as many as needed; each adds its extra price.
- **Quantity** and **Special instruction** (for example "less spicy"). Instructions are printed on the kitchen ticket and shown in red on the kitchen display.
- **Sold by weight** items ask for the weight in kg (for example 0.75); the price shown is per kg.

Tapping the same simple item again increases its quantity. Use **−** / **+** in the cart to change quantity and ✎ to change options or the instruction. 🗑 removes a line.

Custom (open) item

For something not on the menu — for example an extra plate charge — open **⋯ More**, type the item name and price under **Custom / open item** and click **Add**.

4.5 Customers

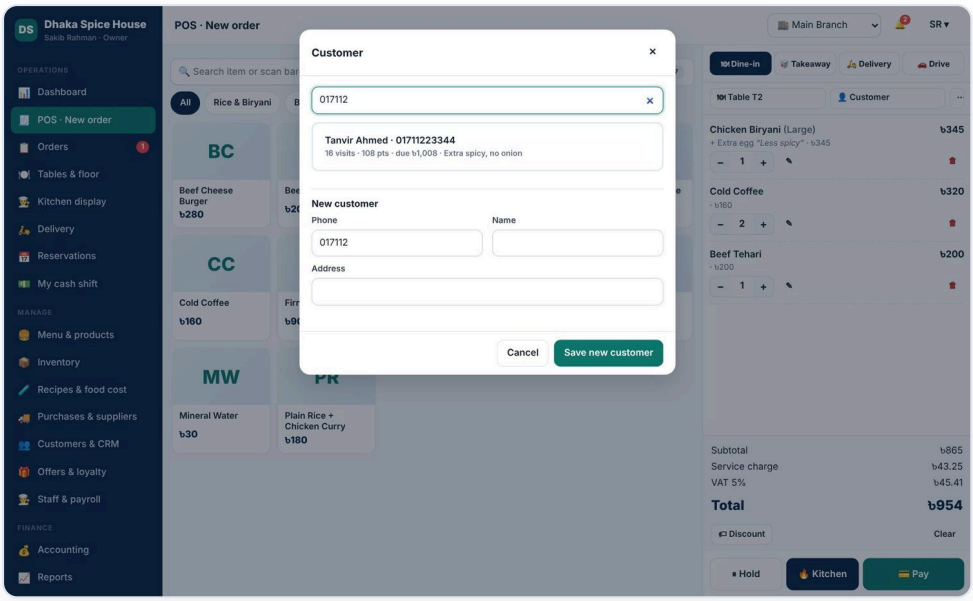

Figure 20 — Find or add a customer

Tap **👤 Customer**, then type a phone number or name. Matching customers are listed with their visits, loyalty points, due amount and preferences — tap one to select it. If there is no match, fill **Phone**, **Name** and **Address** under *New customer* and click **Save new customer**. Customers marked *restricted* cannot be selected.

Attaching a customer lets you: earn and redeem loyalty points, sell on due (credit), apply their special discount automatically, and see their full order history later.

4.6 Delivery details

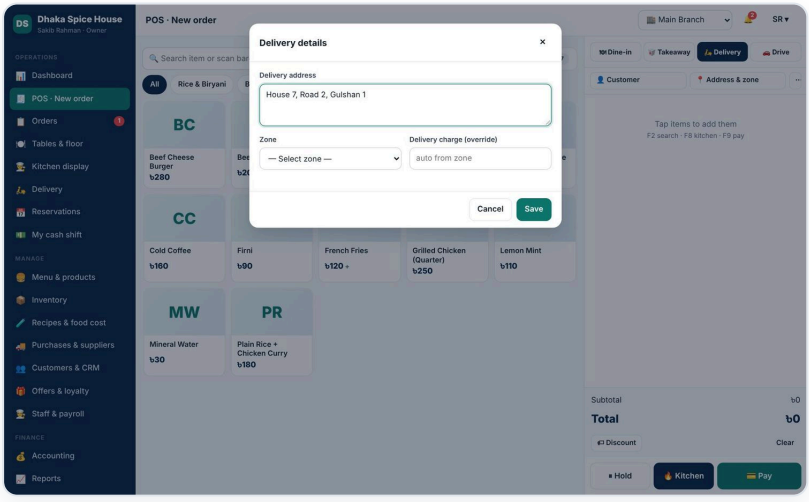

Figure 21 — Delivery address and zone

For a delivery order tap **📍 Address & zone**. Enter the full address (it is filled automatically from the customer's saved address), choose the zone, and optionally type a different delivery charge to override the zone's charge.

4.7 Discounts, coupons and loyalty points

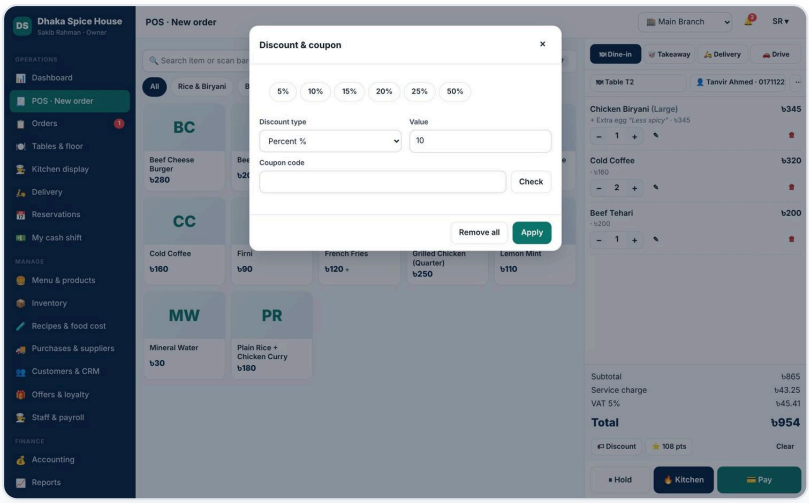

Figure 22 — Discount & coupon window

TYPE	HOW
Quick % discount	Tap **🏷 Discount**, then a chip (5%, 10% … 50%) and **Apply**.
Bill discount	Choose **Percent** or **Fixed amount** and type the value.
Coupon	Type the code and click **Check** to see the saving, then **Apply**. The system checks dates, minimum order, usage limit and first-order rules.
Item discount	Tap ✎ on an item that was already sent to the kitchen, or use the item's edit window, and enter a discount amount for that line.
Loyalty points	When the customer has points, a **⭐ points** button appears. Enter how many points to redeem.
Customer special discount	Applied automatically if the customer has a special discount % and you did not give another bill discount.

ℹ️ Staff without the *Give discounts* permission are asked for a manager PIN. **Remove all** clears every discount and coupon from the order.

4.8 VAT and service charge

VAT and service charge are calculated automatically from **Settings → VAT, charges & payments**:

- **Service charge %** is calculated on the bill after discounts. It can be limited to dine-in orders only.
- **VAT %** is calculated on the bill after discounts plus service charge. Items marked *VAT exempt* are excluded.
- If your menu prices already include VAT, tick **Menu prices already include VAT** — the VAT part is then shown on the bill but not added on top.
- If **Round bill total** is on, the total is rounded to the nearest whole taka.

4.9 Order options (⋯ More)

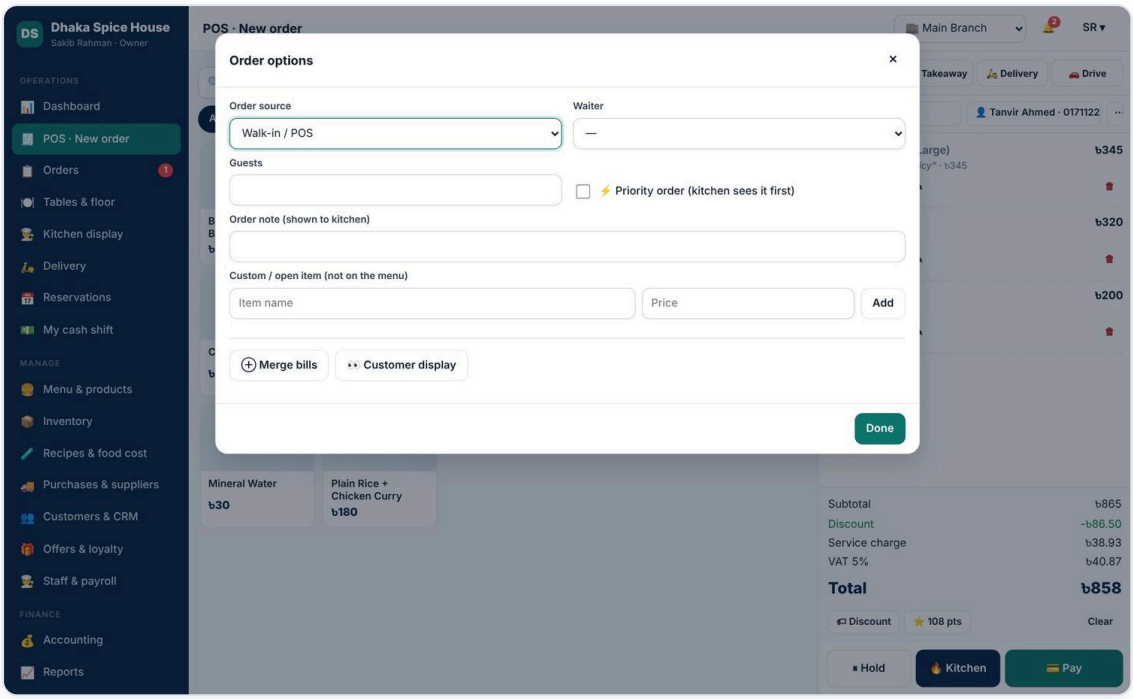

Figure 23 — Order options

OPTION	USE
Order source	Where the order came from — Walk-in, Phone, Foodpanda, Pathao Food, Facebook, or your own sources (edit the list in Settings). Used in reports.
Waiter	Who is serving. Used for waiter performance reports. Orders taken by a waiter login are assigned to them automatically.
Guests	Number of guests at the table.
⚡ Priority order	The kitchen sees this order first, with an orange border.
Order note	A note for the whole order, shown to the kitchen.
Custom / open item	Add an item that is not on the menu.
Buttons	🖨 Print KOT, 🖨 Print bill, ✂ Split bill, ⇄ Move table, ⊕ Merge bills, ✕ Cancel / void order, 👀 Customer display. Some appear only after the order is saved.

4.10 Hold, send to kitchen, and running orders

- **⏸ Hold** saves the order without sending it to the kitchen (for example while a guest decides). It appears in Running with status **Held**.
- **🔥 Kitchen** saves the order and sends all new items to the kitchen display.
- **🗂 Running** lists every open, held and waiting order. Click one to load it back into the cart. While editing a saved order, the top of the cart shows *Editing order #…*; click *✕ New order* to start a fresh one.

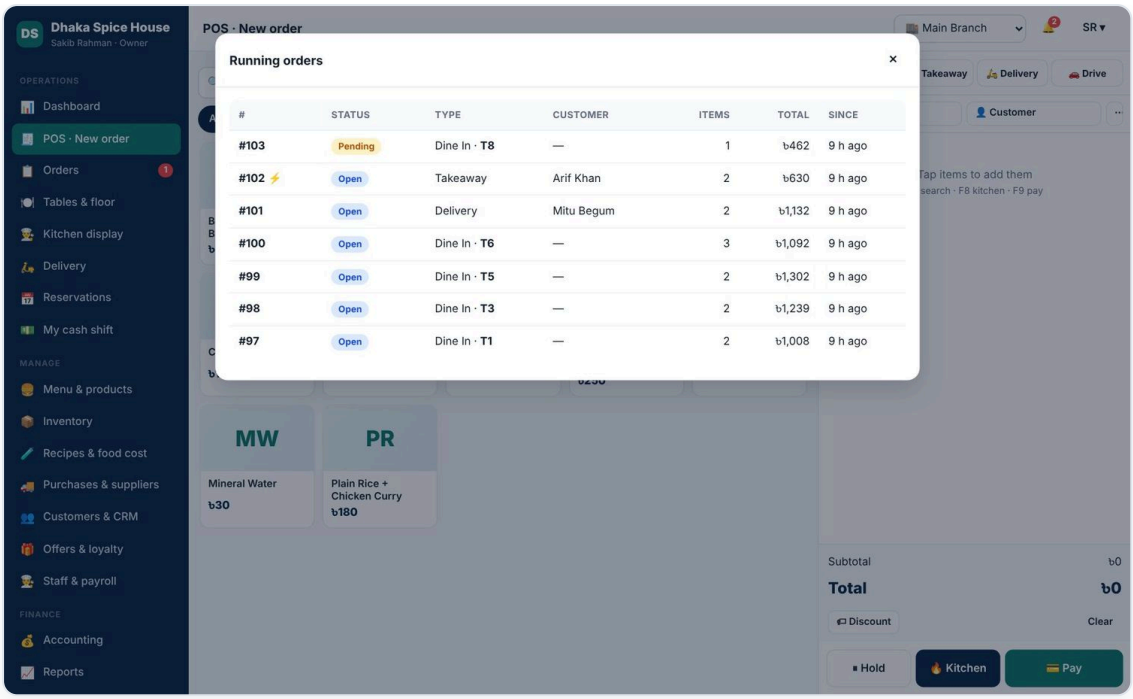

Figure 24 — Running orders

4.11 Taking payment

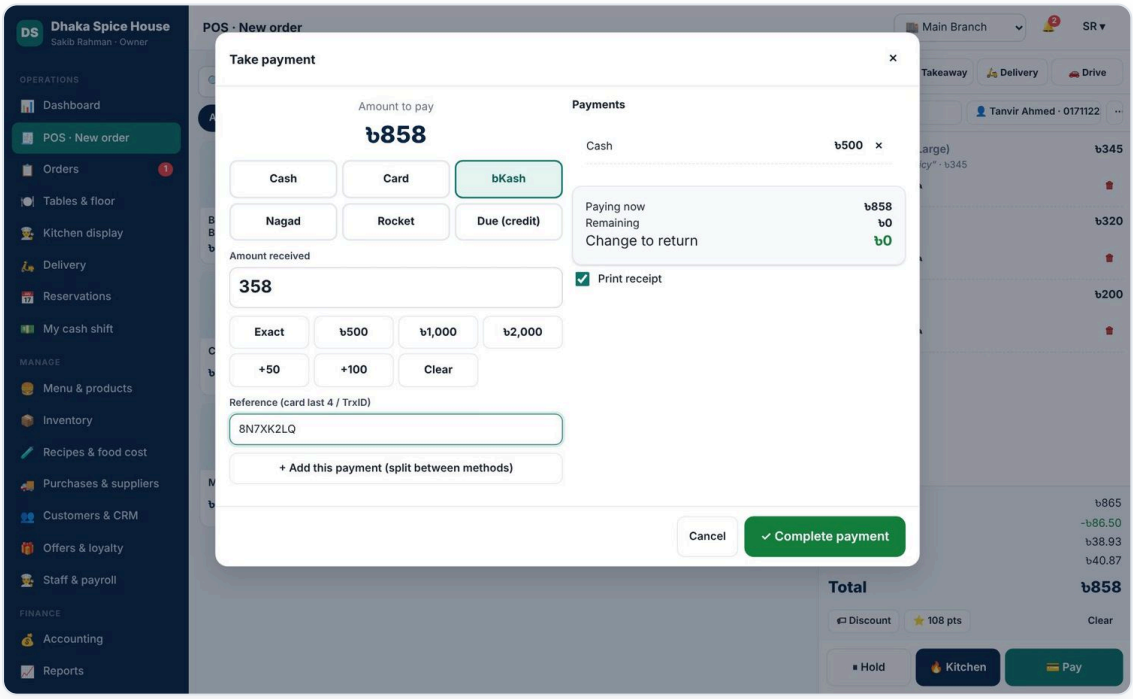

Figure 25 — Payment window — this bill is split between cash and bKash

1. Tap **Pay** (or press **F9**). The amount to pay is shown in large text.
2. Choose the payment method: Cash, Card, bKash, Nagad, Rocket, Due (credit), or your own methods.
3. Type the amount received or use the quick keys (*Exact*, rounded notes, +50, +100). For card or mobile payments, type the last 4 digits or the **TrxID** in *Reference*.
4. For a **split payment**, click **+ Add this payment**, choose the next method and enter the rest.

5. Check **Change to return** — it is calculated from the cash part only.
6. Leave **Print receipt** ticked to print automatically (your choice is remembered), then click **✓ Complete payment**.

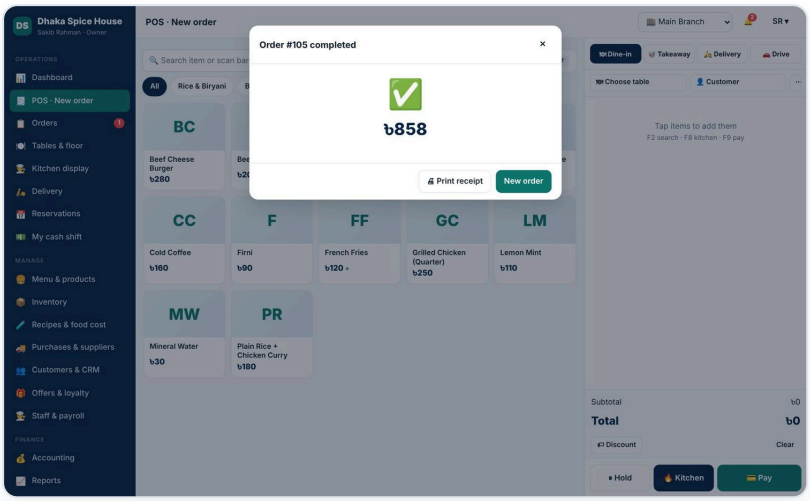

Figure 26 — Payment completed — the change to return is shown

Partial payment

If less than the full amount is received, the system asks you to confirm and saves it as a partial payment. The order stays open with the remaining amount due, so you can take the rest later.

Due (credit) sales

Choose **Due (credit)** to let a known customer pay later. A customer must be selected. If the customer has a credit limit, the sale is blocked when their total due would exceed it. Collect the money later from **Customers → Customer dues**.

What happens when an order is fully paid

- The order becomes **Completed** and the table is released (or marked *cleaning* if that setting is on).
- Ingredients are deducted from stock using each item's recipe, and the food cost of the order is saved.
- The customer's visits, total spend and loyalty points are updated; redeemed points are subtracted.
- Coupon usage is counted.

4.12 Receipts and kitchen tickets (KOT)

Dhaka Spice House
Road 11, Banani, Dhaka
01750006696
Authentic Dhaka flavours since 2020
BIN: 004512378-0101

RECEIPT

Order #105 — 01 Nov, 12:54 pm
Dine In · Table T2 — Sakib Rahman
Customer: Tanvir Ahmed 01711223344

Chicken Biryani (Large)	৳345
+ Extra egg	
1 × ৳345	
Cold Coffee	৳320
2 × ৳160	
Beef Tehari	৳200
1 × ৳200	
Subtotal	৳865
Discount	-৳86.50
Service charge	৳38.92
VAT 5%	৳40.87
TOTAL	**৳858**
Paid · Cash	৳500
Paid · bKash	৳358

Thank you! Please come again.
Powered by Baybex Restaurant

Figure 27 — Printed receipt

The receipt shows your logo, name, branch address, phone, header line, VAT registration (BIN), order number, date, order type, table, cashier, customer, every item with options, discounts, service charge, VAT, delivery charge, total, payments, change and your footer message.

- **Print receipt** — automatic after payment, or from the order details any time (reprint).
- **Print bill** — an unpaid bill to give the guest before paying (marked "BILL (not paid)").
- **Print KOT** — a kitchen order ticket with large quantities, options, instructions, table and waiter.
- Paper width 80 mm or 58 mm is set in **Settings → Receipt**.

> 💡 In the browser print window, choose your thermal printer and set margins to *None* the first time. Chrome remembers it.

4.13 Split bill, merge bills, move table

Split bill

Open the order → **⋯ More** → **✂ Split bill**. Tick the items (and the quantity) to move to a new separate bill, then click **Split into new bill**. Each bill can now be paid separately. Split before taking any payment.

Merge bills

⊕ Merge bills moves all items from other open bills into the bill you keep — for example when two tables join. Bills that already have a payment cannot be merged.

Move table

⇄ Move table shows the floor; tap the new table. The old table is released automatically.

4.14 Cancel (void) and refund

ACTION	USE IT WHEN	HOW
Remove an item	An item is wrong before or after it was sent to the kitchen.	🗑 in the cart. Items already in the kitchen need a manager PIN and appear as cancelled on the kitchen screen.
Void order	The whole order is cancelled before it is paid (guest left, wrong order).	Order → **Void**. A reason is required. Any part payment is recorded as refunded.
Refund	Money is returned after the order was paid.	Order details → **↩ Refund**. Enter amount (full or part), method and reason.

When refunding, tick **Put ingredients back into stock** only if the food was not made or was returned unused. Every void and refund is shown in the Cancellations and Refunds reports with who did it and who approved it.

4.15 Offline billing

If the internet drops while you take a **new** order and press Pay, the sale is saved on that device, a receipt can still be printed (marked *offline*), and a message confirms it. As soon as the internet returns — or within 20 seconds of opening the POS again — the saved sales are sent to the server automatically and a message shows how many were synced.

> ⚠️ Do not clear the browser data on the POS computer while offline sales are waiting. Offline mode covers new paid orders; tables, kitchen and other screens need the internet.

4.16 Keyboard shortcuts

KEY	ACTION
F2	Jump to the search / barcode box
F8	Send to kitchen
F9	Open payment
Enter	In the search box: add the item whose barcode or SKU matches. In the payment window: complete payment.
Esc	Close any window

4.17 Customer-facing display

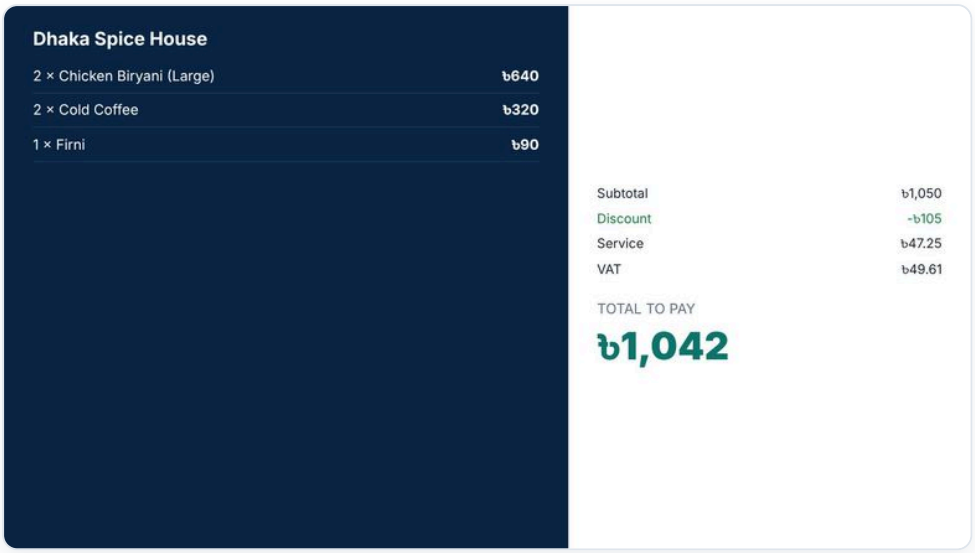

Figure 28 — Customer-facing display on a second screen

Connect a second monitor to the POS computer, open **⋯ More** → **👀 Customer display** (or the display link in **Settings → QR & online ordering**) in the **same browser**, and drag that window to the second screen (press **F11** for full screen). The guest sees each item, discounts, VAT and the total to pay as you build the order. When the cart is empty it shows a welcome message with your logo.

5 Orders

The Orders page lists every order of the current branch. It refreshes automatically every 15 seconds.

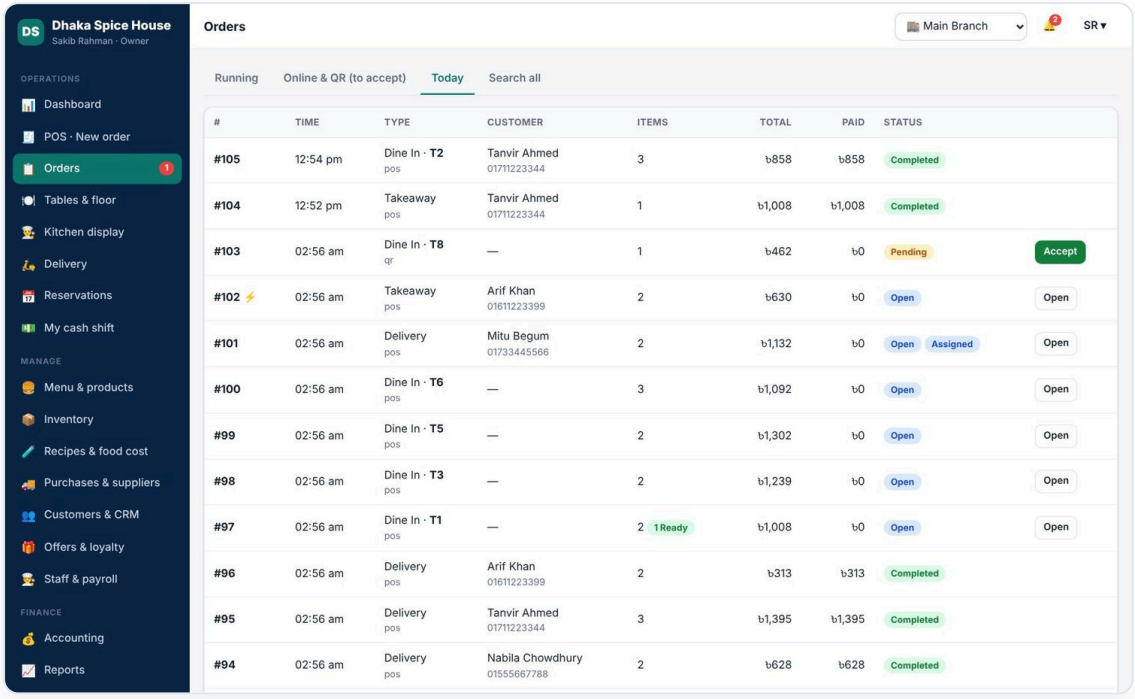

Figure 29 — Orders — Today tab

5.1 Tabs

TAB	SHOWS
Running	Open and held orders. **Open** loads the order into the POS.
Online & QR (to accept)	Orders from the QR menu, online menu or kiosk waiting for acceptance, with an **Accept** button.
Today	All of today's orders in every status.
Search all	Any date range; search by order number, customer name or phone. Owners can choose *All branches*.

Each row shows the order number (⚡ = priority), time, type and table, source, customer, number of items (with a green badge when items are ready to serve), total, paid and status.

Order statuses

STATUS	MEANING
Pending	Online / QR order waiting to be accepted.
Open	Order in progress, not fully paid.

Held	Saved but not sent to the kitchen.
Completed	Fully paid.
Cancelled / Rejected	Voided by staff / online order rejected.
Merged	Its items were moved into another bill.

5.2 Order details

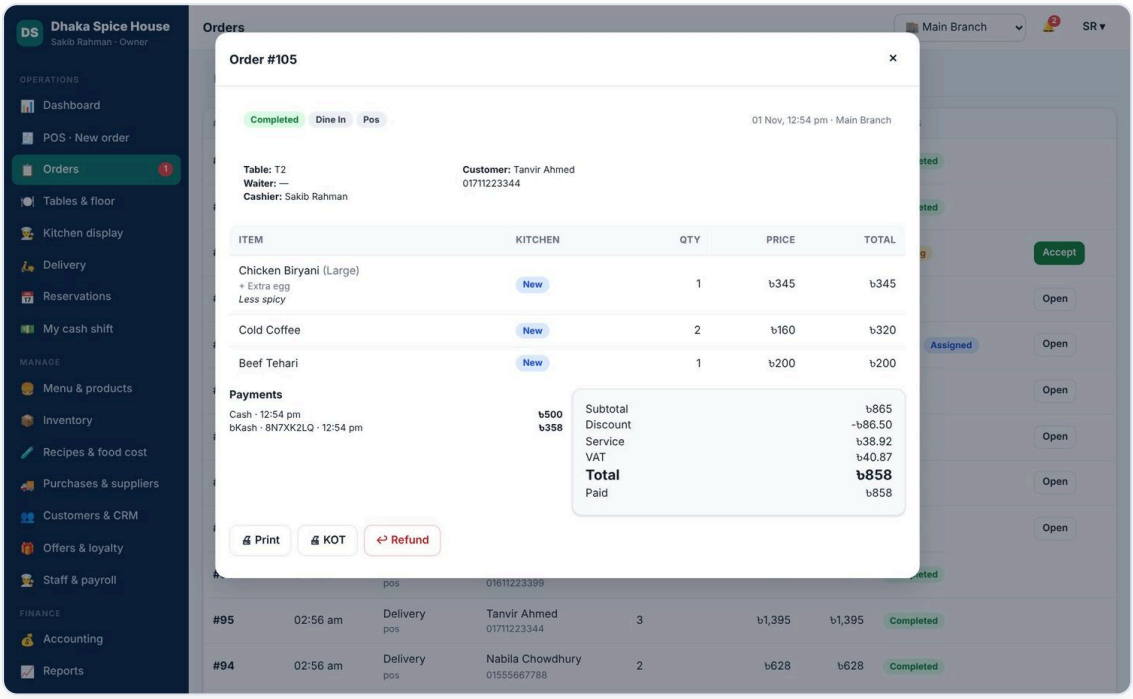

Figure 30 — Order details window

Click any order to see everything about it: type, source, table, waiter, cashier, customer and address, notes, payment note (TrxID from online orders), rider, each item with its kitchen status, payments, refunds and totals. Depending on the status and your permissions, these buttons appear:

- ✓ **Accept** / ✕ **Reject** — online orders
- **Open in POS** — continue editing / take payment
- ✂ **Split**, ⊕ **Merge**, ⇄ **Move table**
- 🍽 **Mark served** — when items are ready
- 🖨 **Print** — bill or receipt (reprint)
- 🖨 **KOT** — reprint the kitchen ticket
- **Void** — cancel an unpaid order
- ↩ **Refund** — completed orders
- 🔗 **Tracking link** — copy the guest's tracking page link

5.3 Accepting online and QR orders

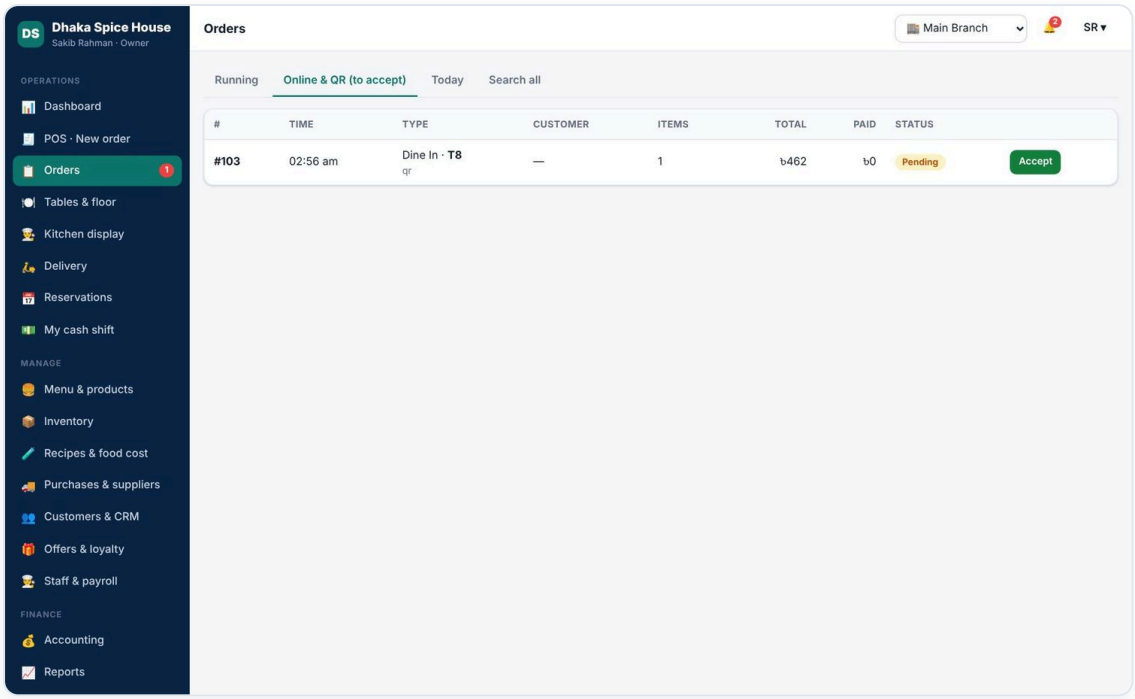

Figure 31 — Orders waiting for acceptance

When a guest orders from the QR or online menu, you hear a beep, see a pop-up, and the red counter on **Orders** goes up. Open **Orders → Online & QR**:

- **Accept** sends the order to the kitchen. If the guest ordered from a table that already has an unpaid bill, the new items are **added to that table's bill** automatically. If SMS is set up, the guest receives a confirmation with a tracking link.
- **✕ Reject** (inside order details) cancels it with an optional reason, shown on the guest's tracking page.

> 💡 To skip this step, turn on **Auto-accept online orders** in Settings → QR & online ordering. Kiosk orders are always accepted automatically.

6 Tables & floor

See every table at a glance, start orders from a table, assign waiters, and print the QR codes guests scan to order.

6.1 Floor plan

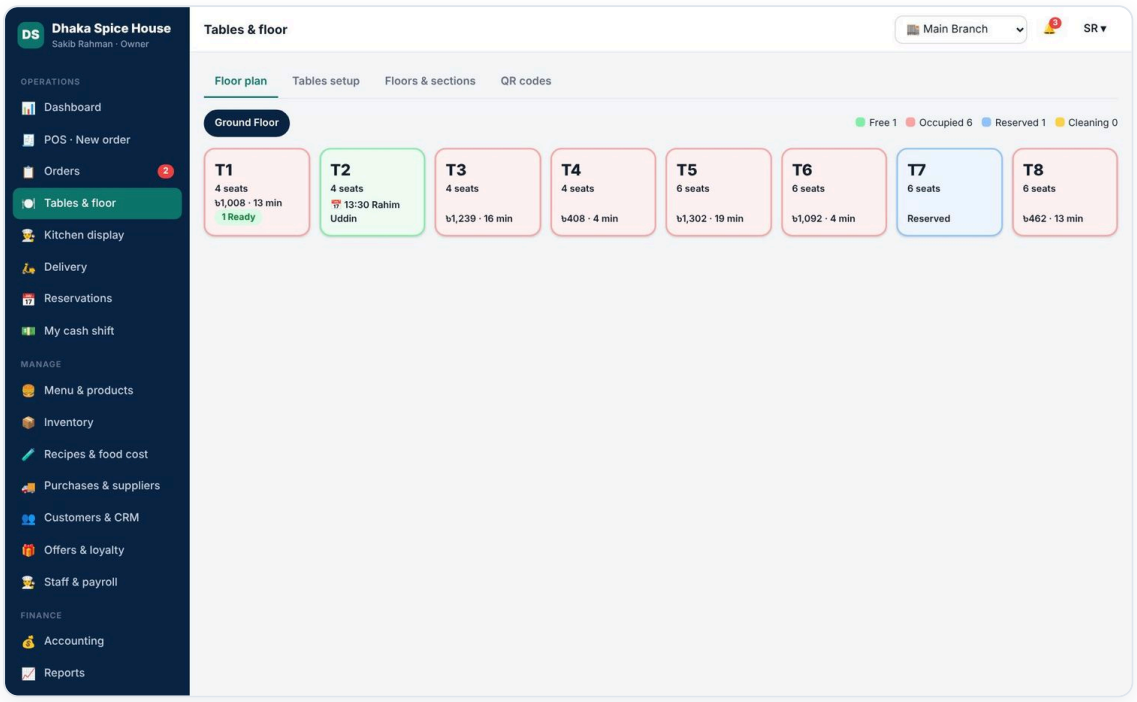

Figure 32 — Live floor plan

COLOUR	MEANING
Green **Free**	Available for new guests.
Red **Occupied**	Has an open bill. Shows the bill amount, minutes since the order started and a Ready badge when food is ready to serve.
Blue **Reserved**	Held for a booking. Today's next reservation (time and name) is shown on the tile.
Yellow **Cleaning**	Guests left; the table is being cleaned.

The counters at the top right show how many tables are in each state. Switch floors / sections with the chips at the top left. The page refreshes every 15 seconds.

6.2 Table actions

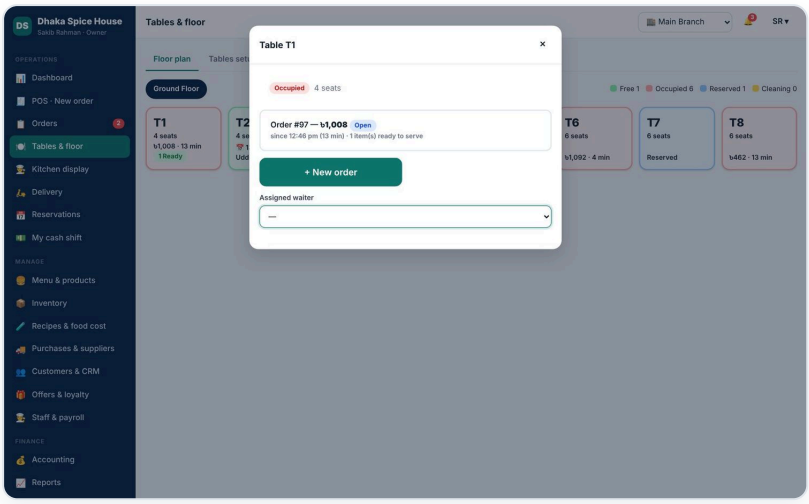

Figure 33 — Tap a table to open its actions

- **Open bills** — tap a bill to see its details, take payment or print.
- **+ New order** — opens the POS with this table selected.
- **✓ Mark free**, **🧹 Cleaning**, **📅 Reserved** — change the table status (when it has no open bill).
- **Assigned waiter** — the waiter is also set on the table's open orders.

> 💡 To mark tables as *cleaning* automatically after payment, turn on **Mark tables as "cleaning" after the bill is paid** in Settings → Restaurant. Tap the table and choose *Mark free* when it is ready again.

6.3 Set up tables and floors

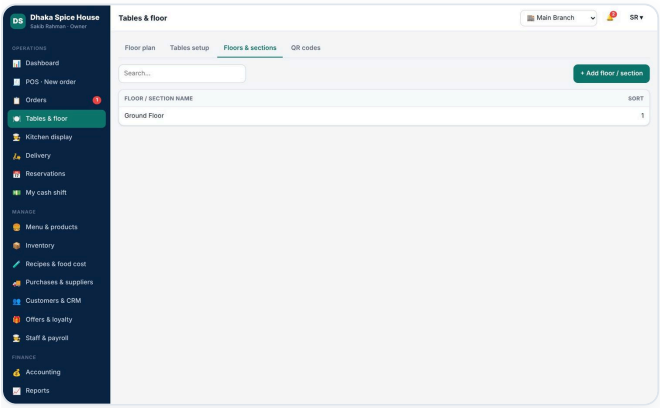

Figure 34 — Floors & sections

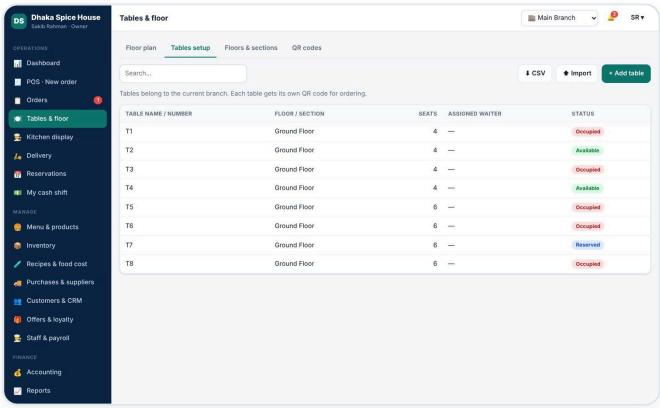

Figure 35 — Tables setup

1. **Floors & sections** → **+ Add floor / section** (for example Ground Floor, Rooftop, Family Zone). Set the *Sort* number to control the order of the tabs.
2. **Tables setup** → **+ Add table**: name or number, floor, seats, shape (square, round or long), assigned waiter and status.
3. Click a table in the list to edit or delete it.

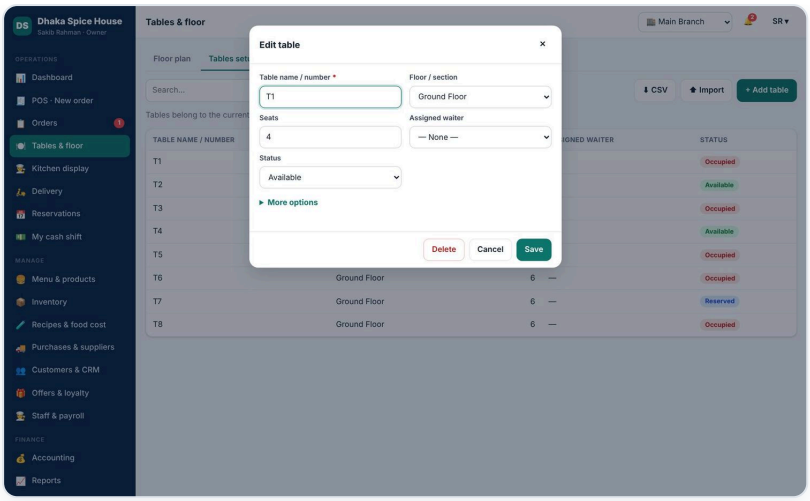

Figure 36 — Edit table

Tables belong to the branch you are working in. Use the branch selector to set up tables of another branch.

6.4 Table QR codes

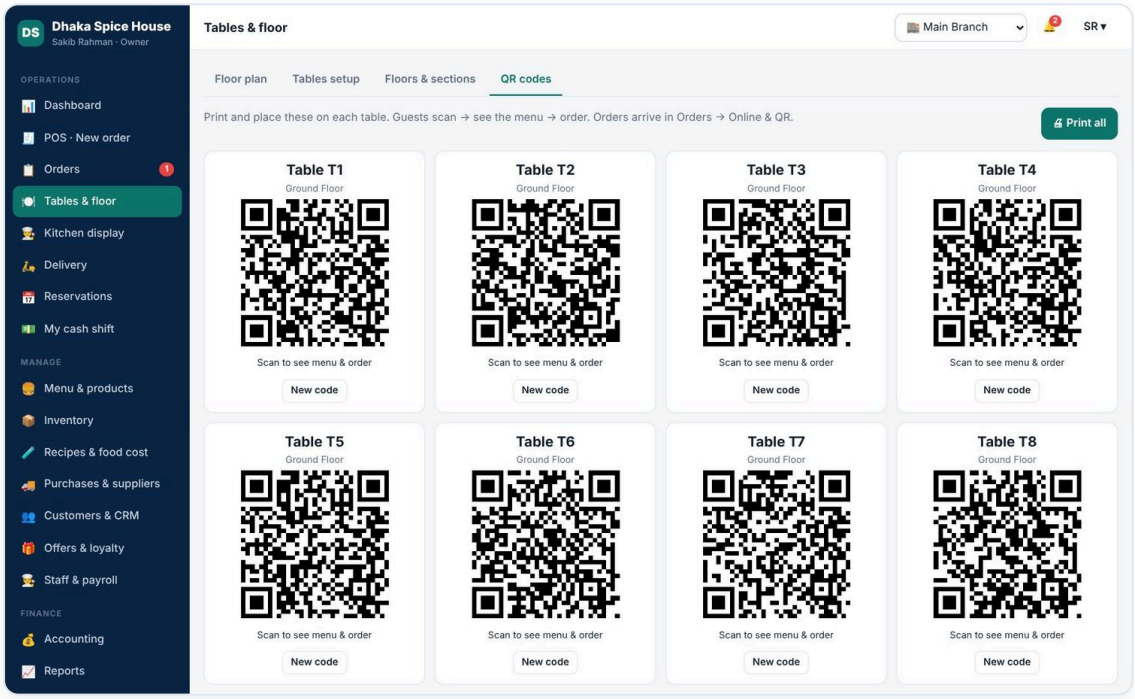

Figure 37 — QR codes for every table

Each table has its own QR code. Guests scan it with their phone camera, see your menu, and order — the order arrives already linked to that table. Click **Print all** to print a sheet of QR cards (three per row) with your restaurant name, and place one on each table.

New code creates a new QR code for a table — the old printed code stops working. Use it if a code was copied or misused.

7 Kitchen display (KDS)

The kitchen display replaces paper tickets. Orders appear the moment they are sent from the POS or accepted online, grouped per order with a running timer.

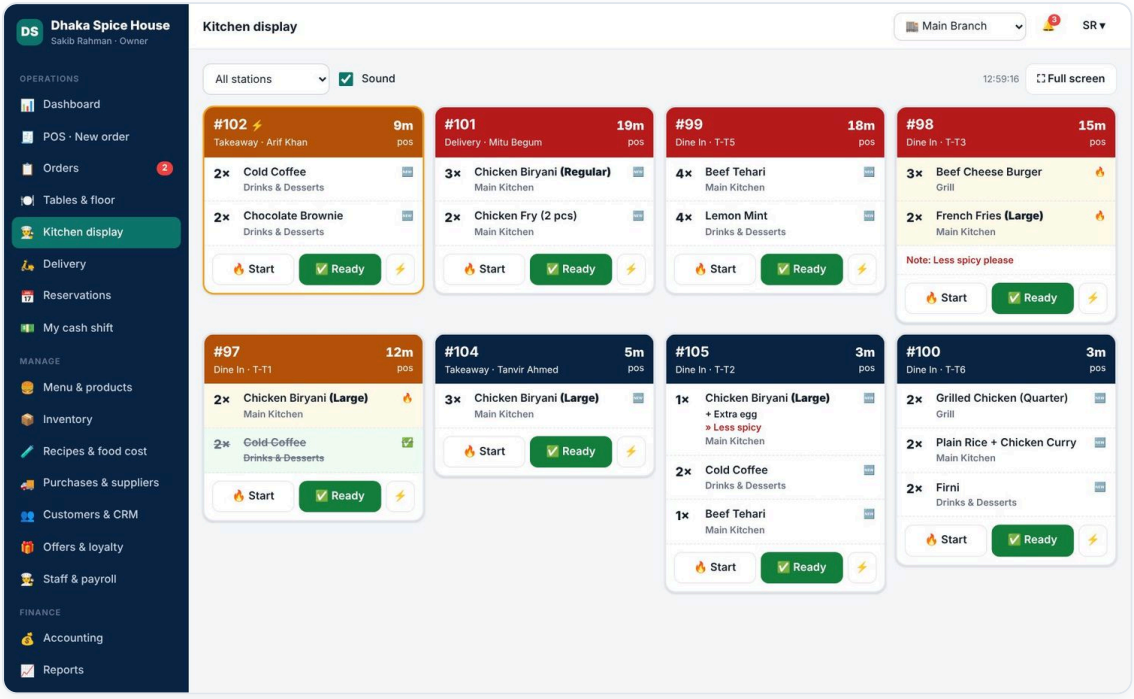

Figure 38 — Kitchen display with live tickets

7.1 Reading a ticket

- **Header** — order number, ⚡ if priority, order type, table (*T-T3*) or customer name, the minutes since it was sent, and the waiter or order source.
- **Header colour** — Navy new, Orange getting late (half of the late limit), Red late, Green everything ready. An orange border means priority. The late limit is set in Settings → Restaurant (default 15 minutes).
- **Items** — quantity, name, size in bold, add-ons, and special instructions in red (» Less spicy). Without a station filter, the station name is shown under each item.
- **Item status** — 🆕 new, 🔥 preparing (yellow background), ✅ ready (green, crossed out).
- **Order note** — shown in red at the bottom.

7.2 Working with tickets

ACTION	RESULT
Tap an item	Moves it to the next step: new → preparing → ready (tap again to go back to preparing).
🔥 Start	Marks all new items of the order as preparing.
✅ Ready	Marks all items ready. Waiters and the cashier get an "Order #... is ready" notification with a beep; online guests get an SMS (if set up).

🍽 Served / bump	Appears when everything is ready. Removes the ticket from the screen.
⚡	Turn priority on or off. Priority tickets move to the front.

Ready tickets that are not bumped disappear by themselves after 20 minutes. If a waiter cancels an item that was already sent, a red **Cancelled** bar appears at the top of the screen so the kitchen stops making it.

7.3 Stations

A station is a separate kitchen screen — for example *Main Kitchen*, *Grill*, *Drinks & Desserts*. Each category is linked to a station (Menu → Categories) and a product can override it (Menu → product → More options → Kitchen station). On each kitchen screen, choose the station from the **All stations** list — that screen then only shows its own items, and *Start / Ready* only affects those items. The choice is remembered on that device.

7.4 Full screen and sound

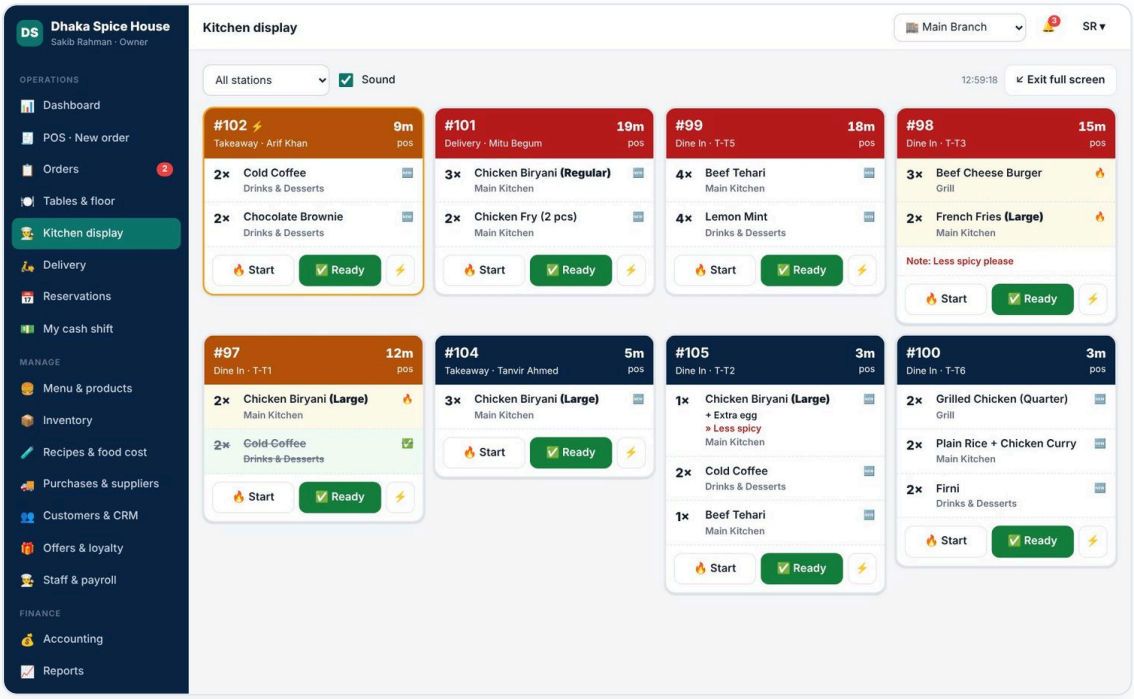

Figure 39 — Full-screen kitchen mode

Click ⛶ Full screen to hide the menu (press F11 as well to hide the browser bars). Keep **Sound** ticked to hear a beep for every new ticket. The screen updates every 6 seconds and shows the current time.

> 💡 Give the kitchen a login with the **Kitchen / Chef** role. It opens straight to the kitchen display and cannot see sales or settings. Turn off the kitchen display completely in Settings → Restaurant if you do not use one — orders are then marked served immediately.

8 Delivery

Manage delivery orders from cooking to the customer's door: zones and charges, riders, assignment, status, and cash collection.

8.1 Delivery board

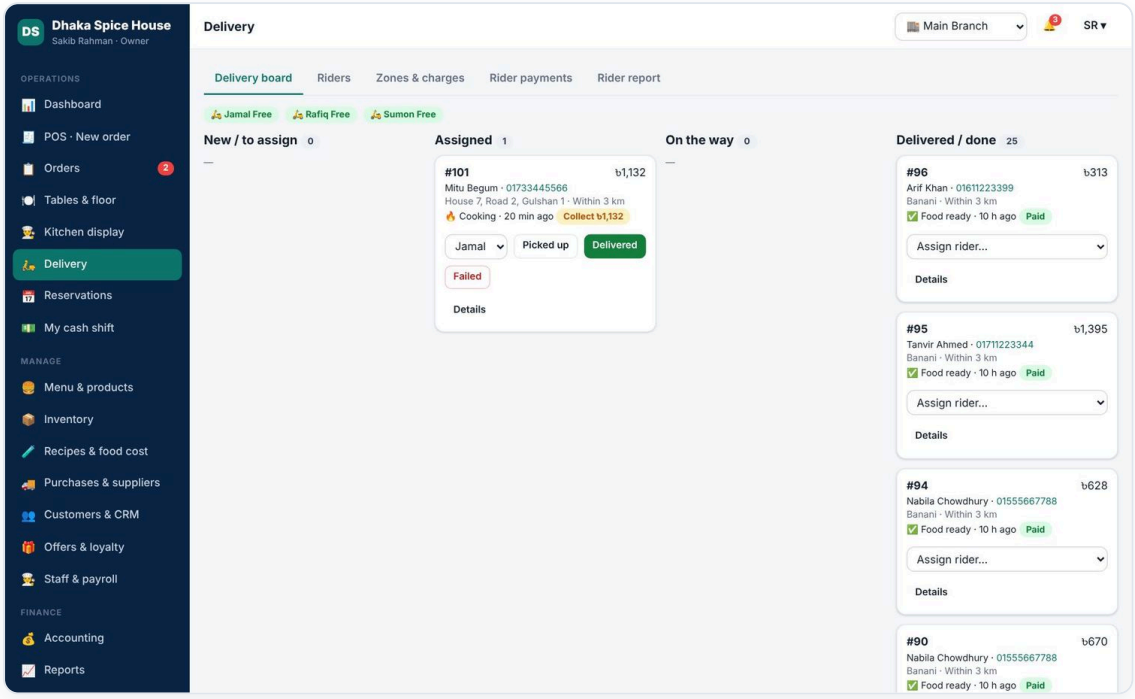

Figure 40 — Delivery board

The top row shows each rider and whether they are **free** or **on delivery**. Orders move through four columns:

COLUMN	WHAT TO DO
New / to assign	Accept online orders; choose a rider from *Assign rider…*.
Assigned	Click **Picked up** when the rider leaves (the rider becomes busy).
On the way	Click **Delivered** or **Failed**. The rider becomes free again.
Delivered / done	Finished deliveries of the last 12 hours.

Each card shows the customer and a tap-to-call phone number, address and zone, whether the food is 🔥 cooking or ✅ ready, the time since the order, and either **Paid** or **Collect ৳…** — the cash the rider must collect. For a delivered cash-on-delivery order, click **Take payment** to record the money in the POS.

8.2 Riders

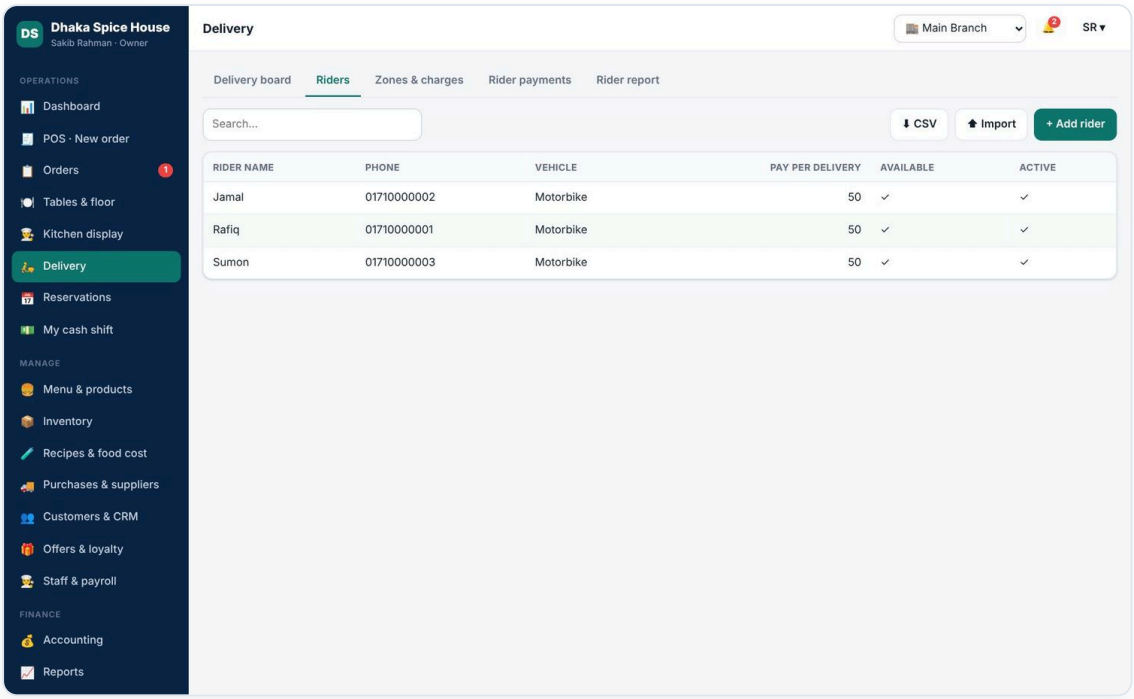

Figure 41 — Riders

Add each rider with name, phone, vehicle and **pay per delivery** (used to calculate earnings). Untick *Available* when a rider is off duty, or *Active* when they leave.

8.3 Zones & charges

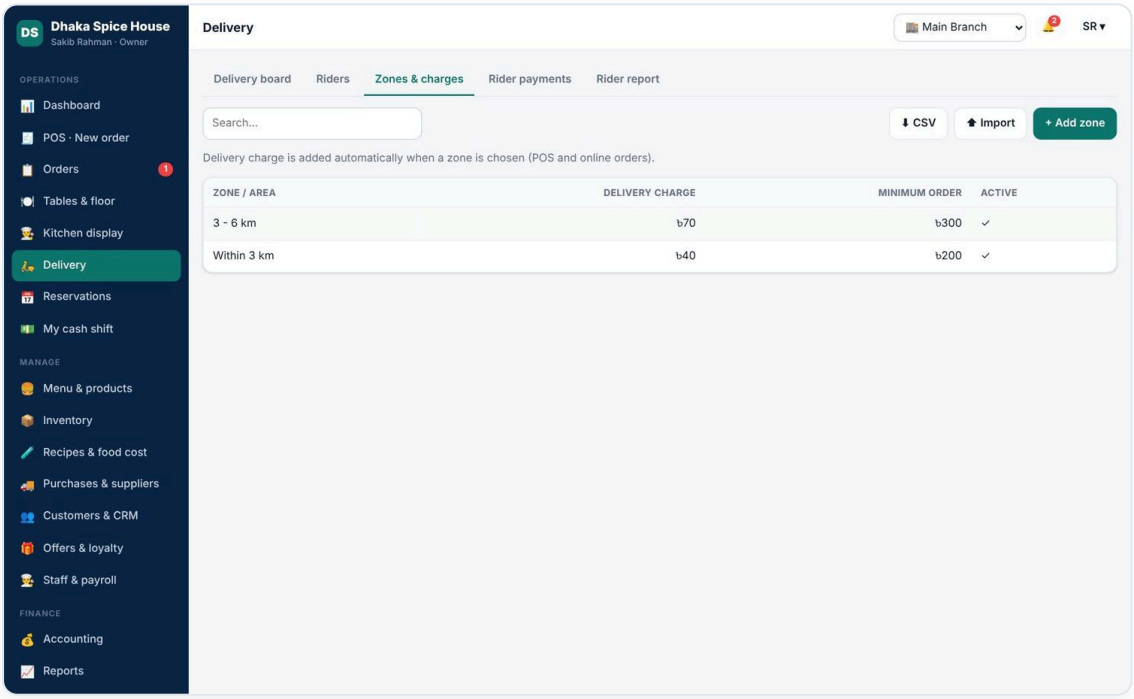

Figure 42 — Delivery zones

A zone is an area you deliver to, with its **delivery charge**, optional **extra per km**, and **minimum order**. Zones appear in the POS and on the online menu; the charge is added to the bill automatically.

8.4 Rider payments

Record money given to riders (*payment*, *advance*) and cash riders hand back after deliveries (*cash deposit*).

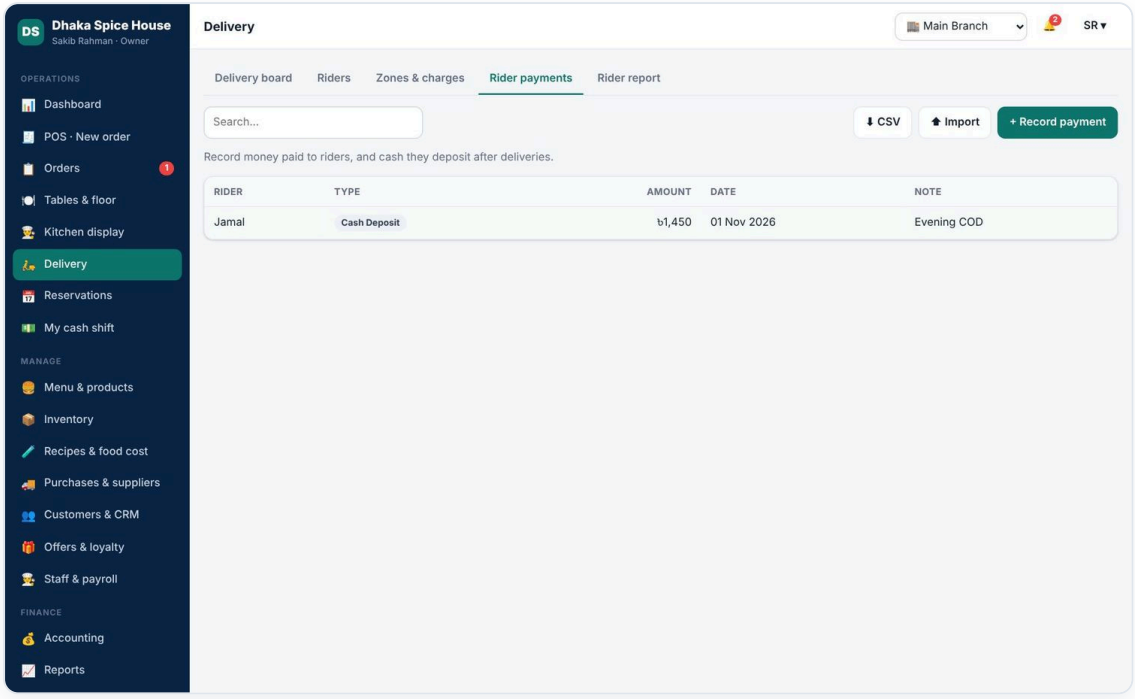

Figure 43 — Rider payments

8.5 Rider report

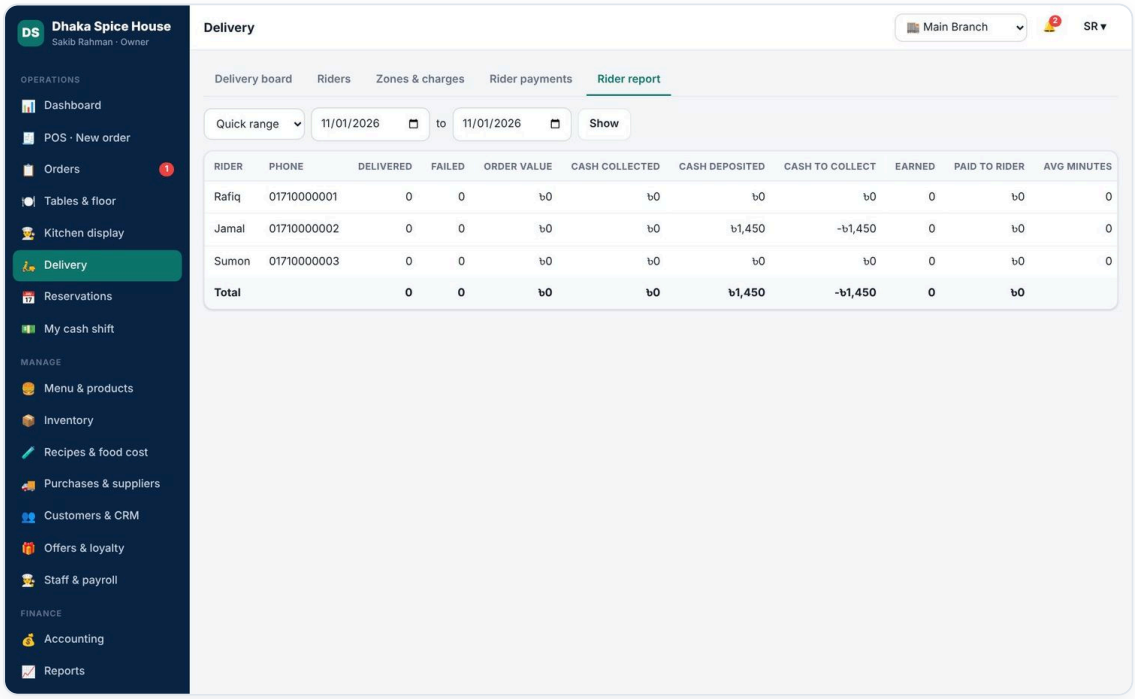

Figure 44 — Rider report

For any date range: deliveries completed and failed, value of orders, **cash collected**, cash deposited, **cash still to collect** from each rider, amount earned (deliveries × pay per delivery), amount paid to the rider, and average delivery time in minutes.

9 Reservations

Take table bookings, deposits and party reservations, run a waitlist, and seat guests with one click.

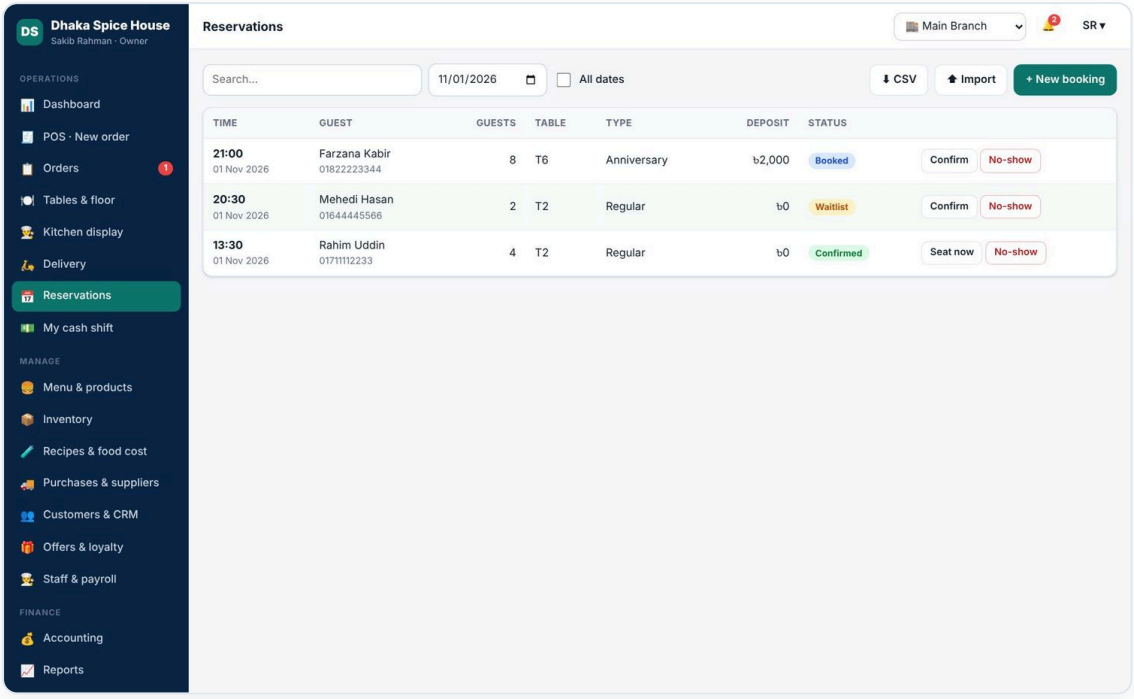

Figure 45 — Reservations for today

9.1 Add a booking

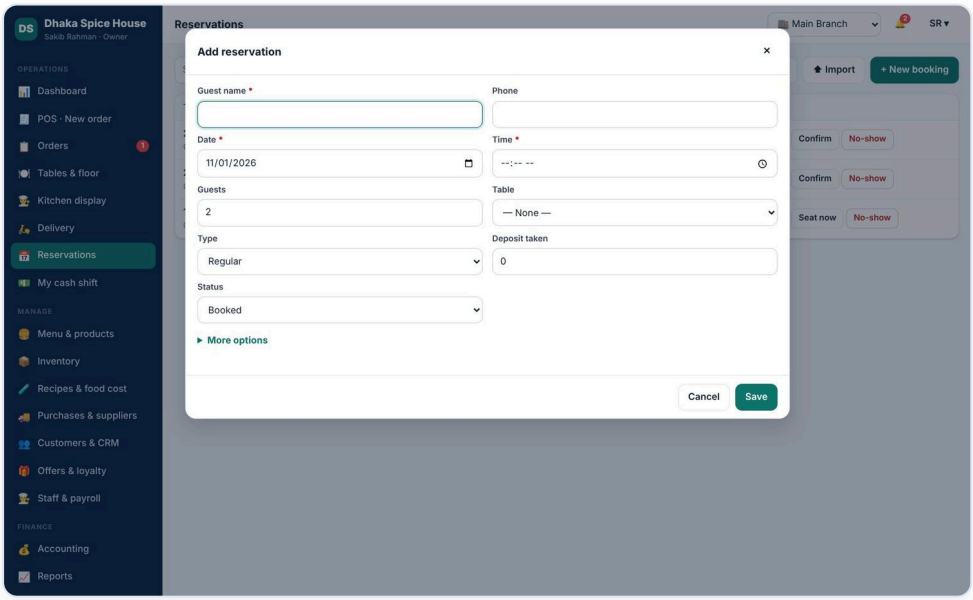

Figure 46 — New booking form

Click **+ New booking** and enter guest name, phone, date, time, number of guests, table, type (Regular, Birthday, Anniversary, Corporate, Party / Event), deposit taken and status. Special requests go under *More options*. If SMS is set up, the guest receives a booking message.

9.2 Booking statuses and actions

STATUS	MEANING · ACTION
Booked	Request recorded. Click **Confirm** to confirm — for today's bookings the table is marked reserved, and an SMS is sent if set up.
Waitlist	No table free yet; confirm when one opens.
Confirmed	Click **Seat now** when the guests arrive. The table is freed for the order and you are offered to start a POS order for that table straight away.
Seated / Completed	Guests arrived / visit finished.
No show / Cancelled	Click **No-show** if the guests did not come. Used to track no-shows.

Use the date box to see another day, or tick **All dates** for the full list. Today's bookings also appear on the dashboard and on the table tiles.

10 Cash shift & drawer

A cash shift tracks all the money a cashier handles from opening to closing, so the cash in the drawer can be checked against the system.

10.1 Open a shift

Go to **My cash shift**, count the cash in the drawer, type it as **Opening cash** and click **Open shift**. Every payment you take is linked to your shift until you close it.

10.2 During the shift

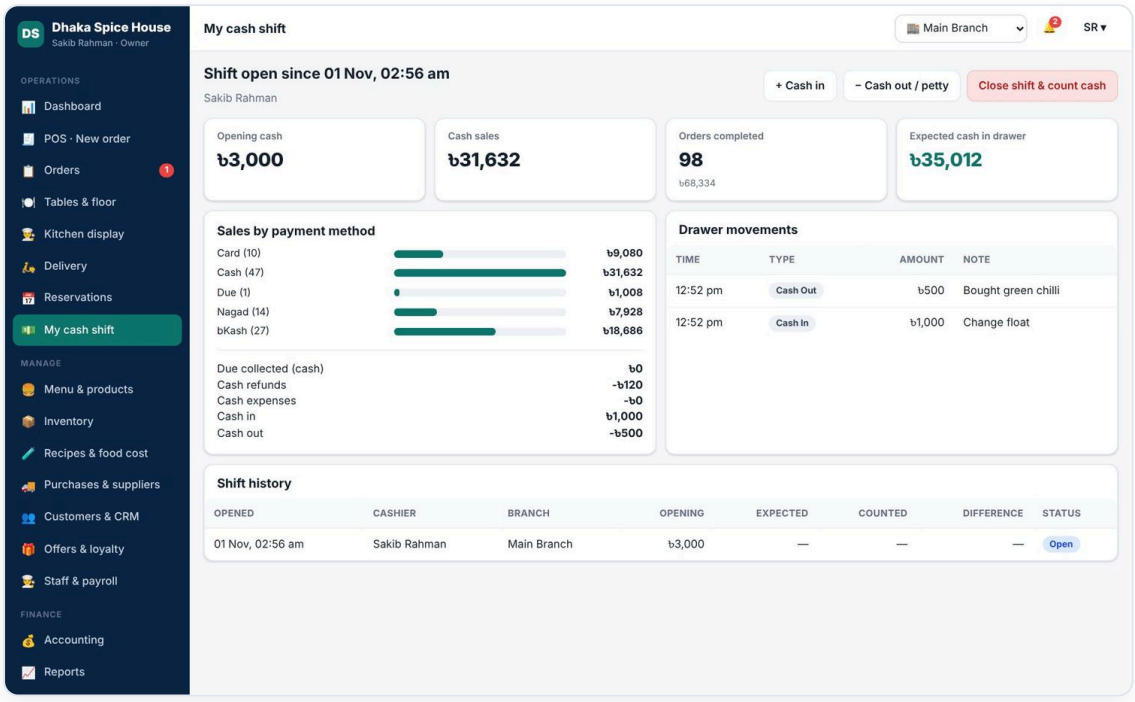

Figure 47 — An open shift with sales by payment method and drawer movements

- **Opening cash, cash sales, orders completed** and **expected cash in drawer** are shown at the top.
- **Sales by payment method** — cash, card, bKash, Nagad, due, etc. with the number of payments.
- **+ Cash in** — money added to the drawer (for example change float).
- **− Cash out / petty** — money taken out (for example buying vegetables). Always write a note.

How expected cash is calculated

Expected cash = Opening cash + Cash sales + Cash due collected + Cash in − Cash out − Cash refunds − Cash expenses

10.3 Close a shift

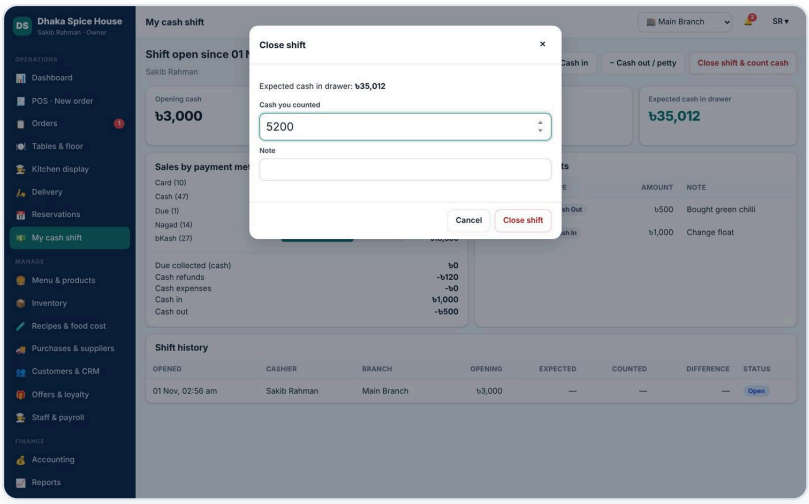

Figure 48 — Closing a shift

1. Click **Close shift & count cash**.
2. Count the drawer and type the amount.
3. Click **Close shift**. The result shows **Cash matches** ✓, or **Extra** / **Short** with the difference.
4. Click **🖨 Print summary** for a closing slip to sign and keep.

All shifts with expected cash, counted cash and the difference are listed under **Shift history**, and for owners and accountants under **Accounting → Cash closings**.

11 Clock in / out

Staff record their own working hours. These feed the attendance and payroll pages.

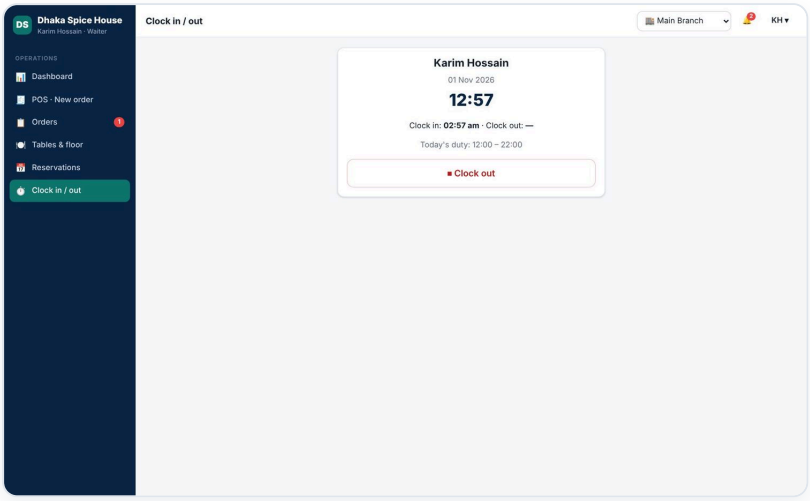

Figure 49 — Clock in / out screen for staff

Open **Clock in / out** and press **▶ Clock in** when you start work and **■ Clock out** when you finish. Your scheduled duty for the day is shown if a manager set one. Managers can clock staff in and out and correct times from **Staff & payroll → Attendance**.

12 Menu & products

Build your menu once and it is used everywhere: POS, QR and online menu, kiosk, menu board, kitchen routing, recipes and reports.

12.1 Products list

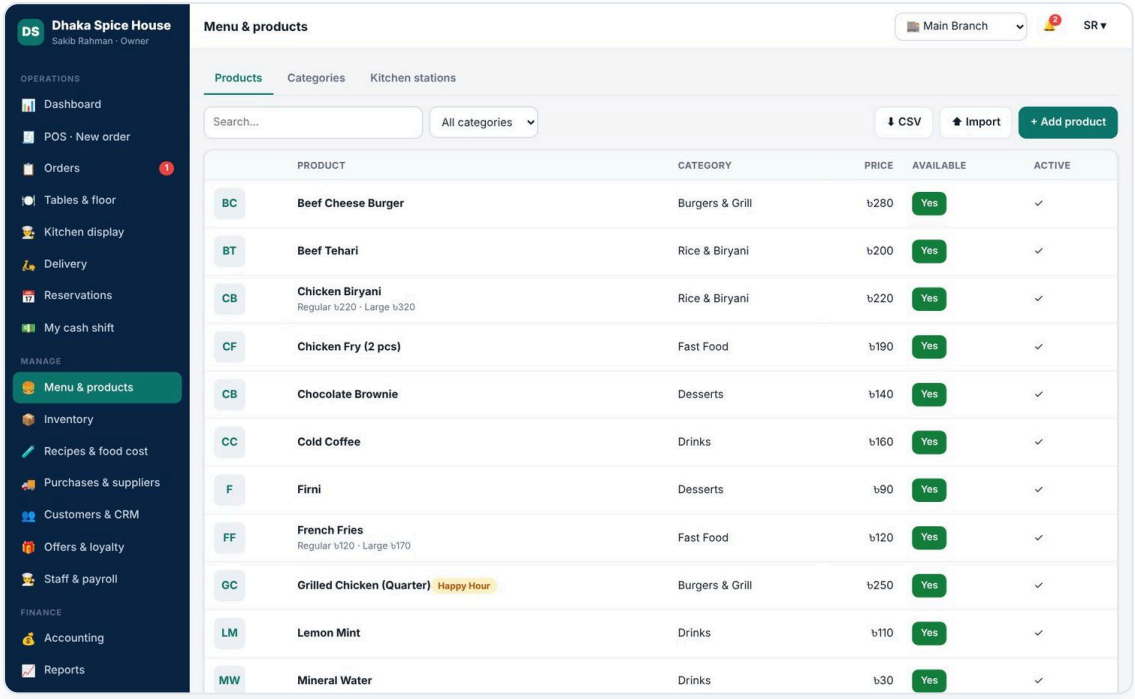

Figure 50 — Menu & products

- Search by name, SKU or barcode; filter by category.
- Badges show special settings: happy hour, a time window such as 11:00–23:00, and branch only.
- The **Available** button switches an item on or off instantly — for example when it is sold out. Unavailable items are hidden from the online menu and greyed out in the POS.
- Click a product to edit it. 🧪 **Recipe** in the edit window opens its recipe.

12.2 Add or edit a product

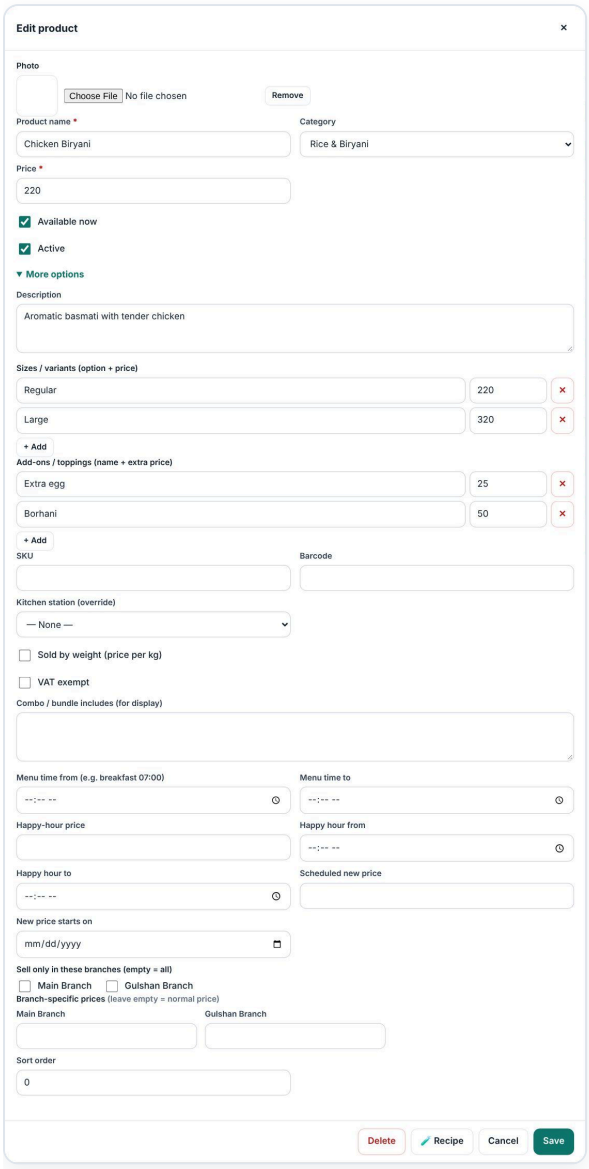

Figure 51 — Product form with "More options" opened

FIELD	MEANING
Photo	Shown in POS, online menu, kiosk and board. Pictures are resized automatically.
Product name, Category	Required name; category groups it on menus.
Price	Normal selling price.
Available now	Quick sold-out switch.
Active	Untick to retire the item while keeping its sales history.
Description	Shown to guests on the online menu.
Sizes / variants	Options with their own price, e.g. Regular ৳220, Large ৳320.
Add-ons / toppings	Extras with an extra price, e.g. Extra egg +৳25.
SKU, Barcode	For search and barcode scanning.
Kitchen station	Send this item to a different station than its category.
Sold by weight	Price is per kg; the POS asks for weight.
VAT exempt	No VAT on this item.
Combo / bundle includes	Text describing what a combo or meal deal contains.
Menu time from / to	Only sell during these hours (breakfast, lunch, dinner menus). Overnight windows such as 18:00–02:00 work.
Happy-hour price, from, to	A lower price that applies automatically during these hours every day.
Scheduled new price, starts on	A price change that starts automatically on the chosen date.
Sell only in these branches	Branch-specific menu. Empty = all branches.

Branch-specific prices	A different price per branch. Empty = normal price.
Sort order	Lower numbers appear first.

ℹ️ A product that already has sales cannot be deleted (to keep your reports correct). Untick **Active** instead.

12.3 Categories

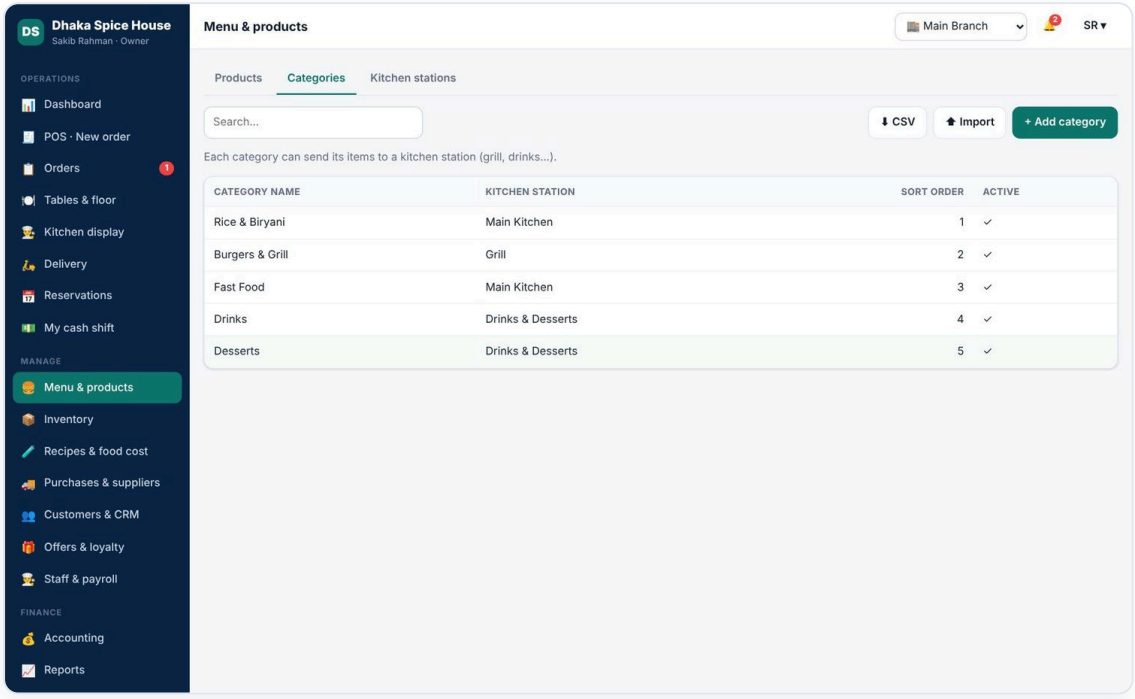

Figure 52 — Categories

Each category has a name, a **kitchen station** (where its items are sent), a sort order, an optional image and an Active switch. Inactive categories are hidden from menus.

12.4 Kitchen stations

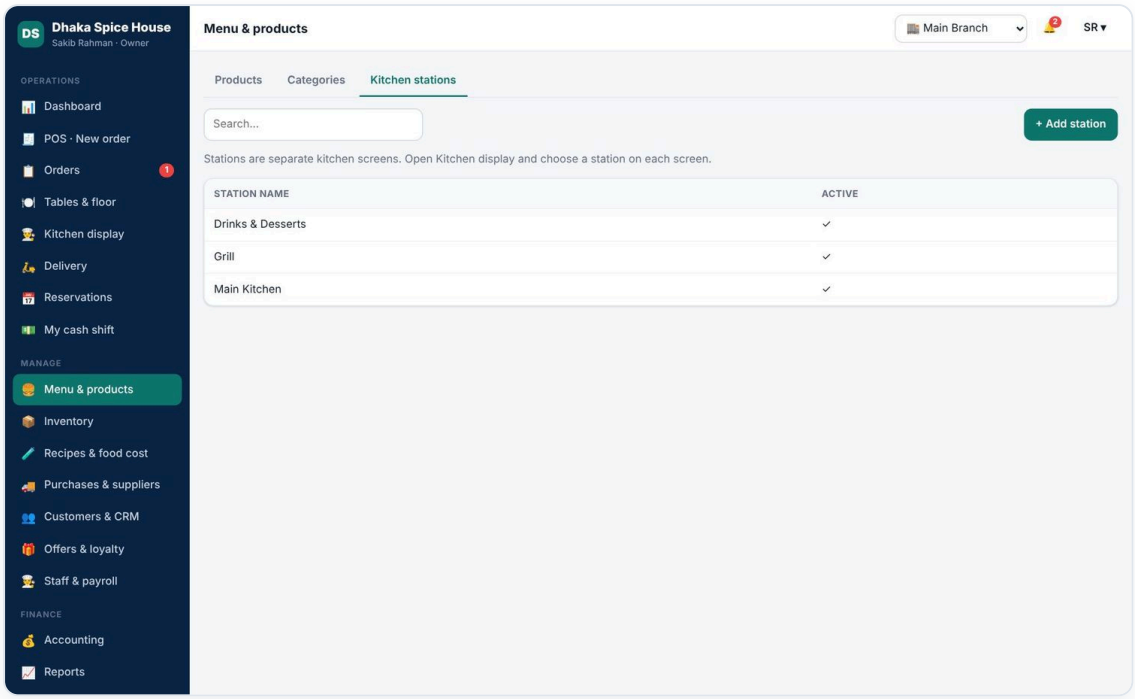

Figure 53 — Kitchen stations

Create one station per kitchen screen or preparation area. Three are created for you: Main Kitchen, Grill, Drinks & Desserts.

12.5 Import and export (CSV / Excel)

Every list in the system has **⬇ CSV** to download it (opens in Excel) and most have **⬆ Import** to upload many records at once. This is the fastest way to load a large menu, customer list, ingredient list or supplier list.

1. Click **⬇ CSV** first to get a file with the correct column names.
2. Fill your rows in Excel and save as **CSV (UTF-8)**.
3. Click **⬆ Import** and choose the file. Confirm.
4. A message shows how many rows were imported; problems are listed with the row number.

> 💡 When importing products you can write the **category name** instead of its number — new categories are created automatically.

13 Inventory & stock

Track every raw material in every branch. Stock goes down automatically with each sale (using recipes), goes up with purchases, and every movement is recorded.

13.1 How stock is calculated

EVENT	EFFECT ON STOCK
Order fully paid	Ingredients in each item's recipe × quantity are deducted (adjusted for cooking yield).
Purchase received (GRN)	Stock goes up; the ingredient's cost is updated to the latest purchase price.
Purchase return	Stock goes down.
Refund with "put back into stock"	The ingredients used are added back.
Stock in / out, wastage, damage, staff meal, adjust	Manual movements (below).
Physical count	Stock is corrected to the counted quantity.
Branch transfer	Goes down in the sending branch, up in the receiving branch.

13.2 Stock

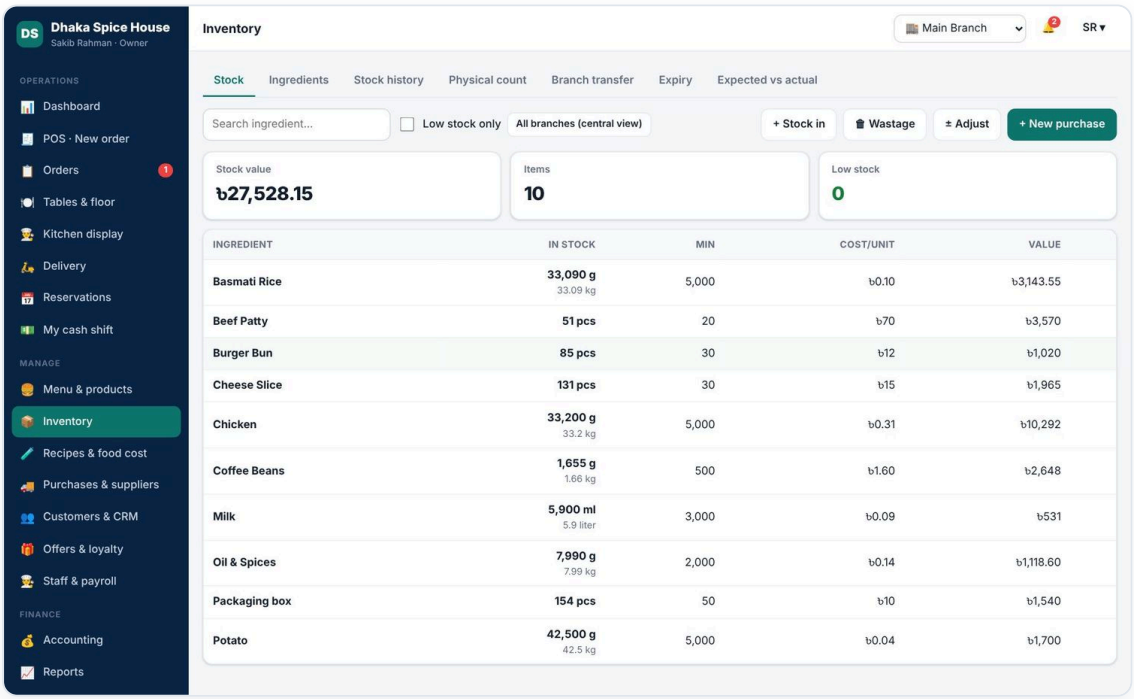

Figure 54 — Inventory — Stock

Shows the **stock value**, number of items and the number of **low-stock** items, then each ingredient with its quantity (also in purchase units, e.g. kg), minimum level, cost per unit and value. Low items are red

with a **Low** badge. Search, or tick **Low stock only**. Click an ingredient to record a movement for it.

Central view of all branches

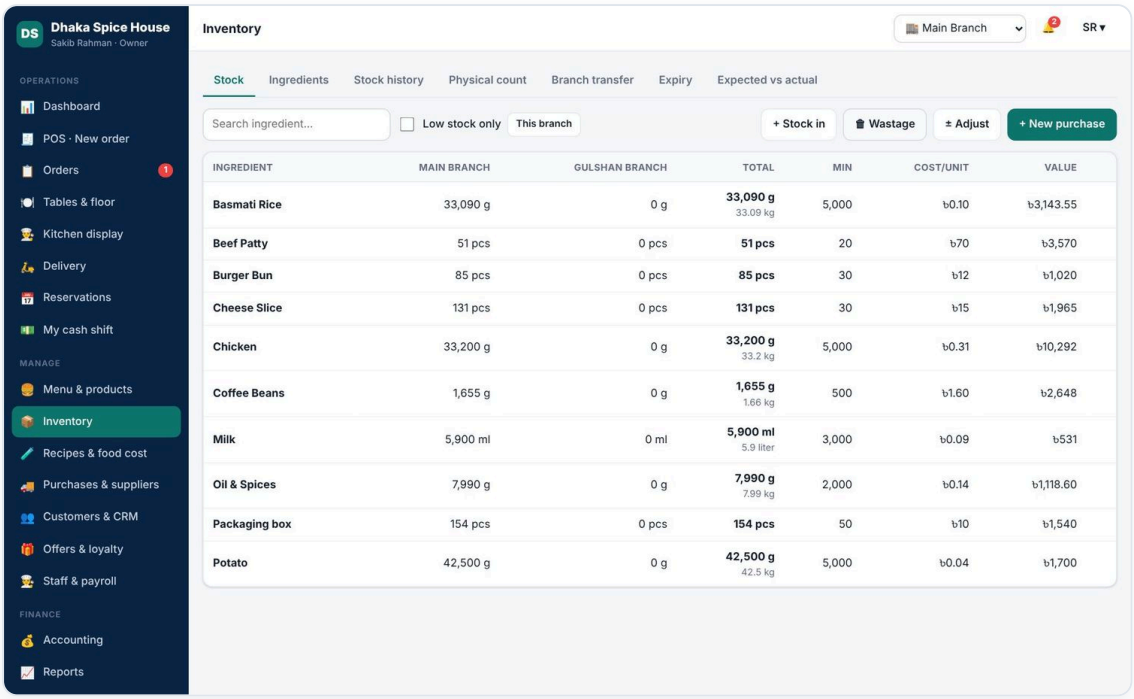

Figure 55 — All-branches stock view

Owners with more than one branch can click **All branches (central view)** to see the quantity in each branch side by side, with the total.

13.3 Record stock in, wastage and adjustments

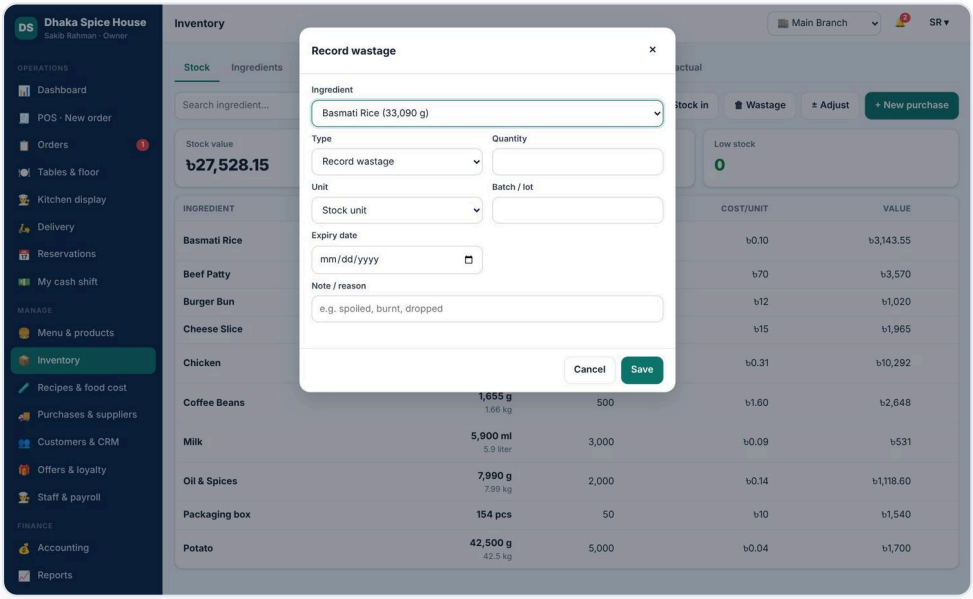

Figure 56 — Recording wastage

Use **+ Stock in**, **🗑 Wastage** or **± Adjust**. Choose the ingredient and type:

TYPE	USE FOR
Stock in	Stock added without a supplier purchase (bought from the market with petty cash, gift).
Stock out	Stock removed for any other reason.
Record wastage	Spoiled, expired, burnt, dropped food. Shown in the wastage report and the P&L.
Damaged goods	Damaged packaging or items.
Staff meal	Food given to staff.
Opening stock	Stock you already had when you started using Baybex.
Adjust (+/−)	Correction; type a minus number to reduce.

Choose whether the quantity is in the **stock unit** or the **purchase unit**, and optionally enter a batch / lot number, expiry date and a note.

13.4 Ingredients

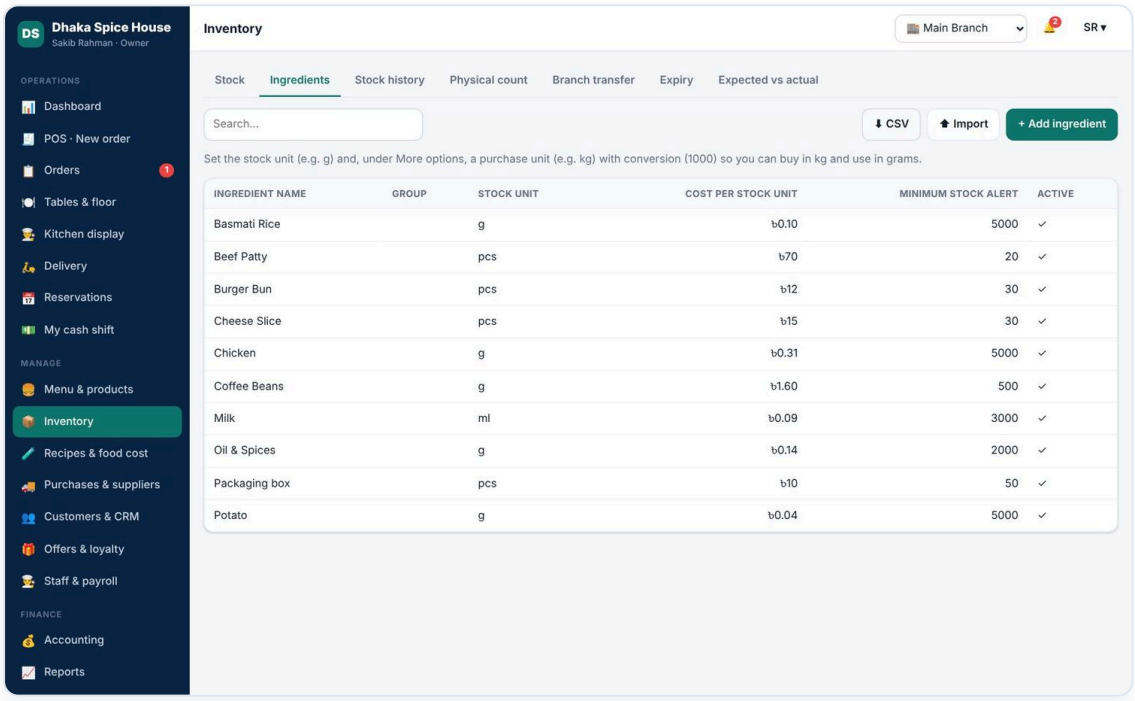

Figure 57 — Ingredients list

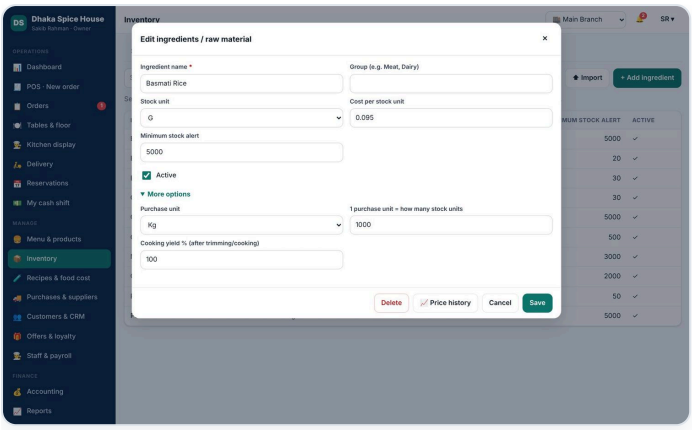

Figure 58 — Ingredient form

FIELD	MEANING
Stock unit	The small unit you use in recipes: g, ml, pcs…
Purchase unit & conversion	The unit you buy in and how many stock units it holds, e.g. 1 kg = 1000 g.
Cost per stock unit	Updated automatically from purchases.
Minimum stock alert	Low-stock warning level.
Cooking yield %	Usable part after trimming or cooking. 80% means 100 g raw gives 80 g usable — recipes then use and cost more raw stock.
Group	Meat, Dairy, Dry goods… for your own sorting.

📈 **Price history** in the edit window shows what each supplier charged over time.

13.5 Stock history

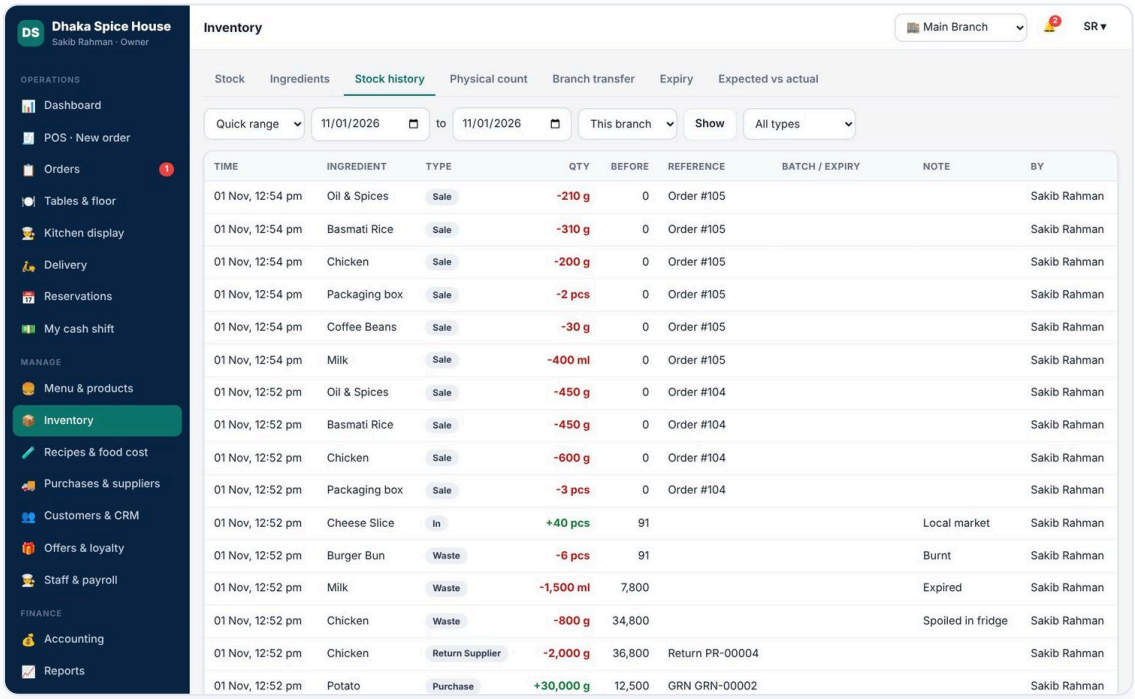

Figure 59 — Stock history

Every movement with time, ingredient, type, quantity (green in, red out), quantity before, reference (order number, GRN, transfer), batch, expiry, note and who did it. Filter by date and type.

13.6 Physical count

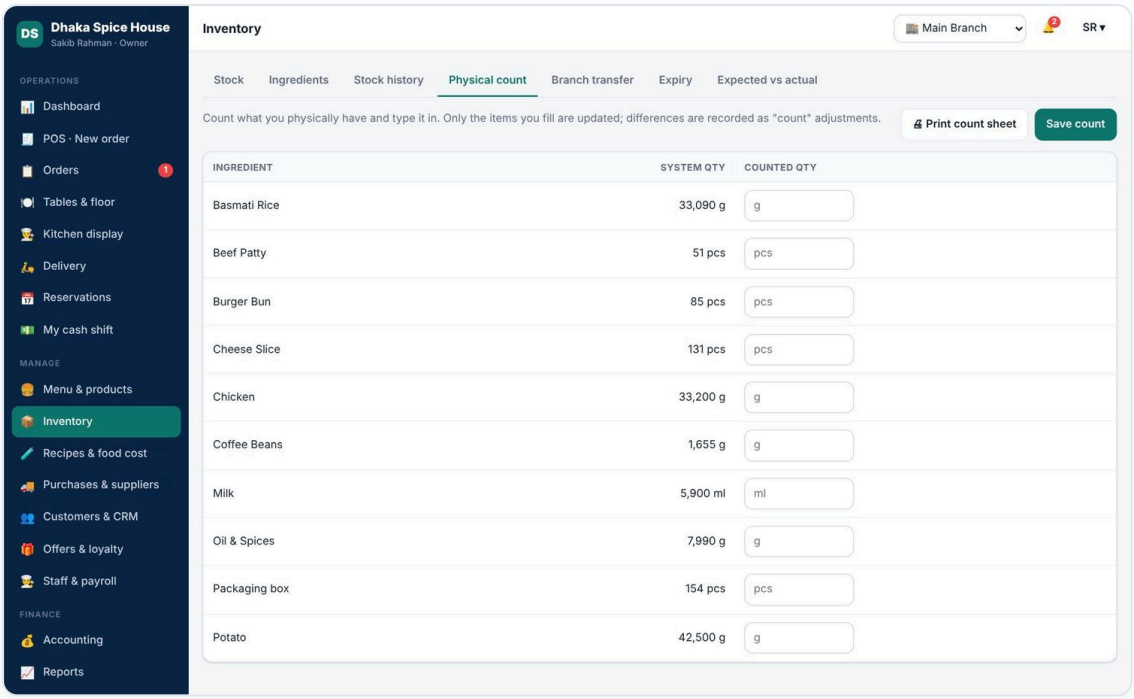

Figure 60 — Physical stock count

1. Click **🖨 Print count sheet** and count the store.
2. Type the counted quantities (leave items you did not count empty).
3. Click **Save count**. Differences are recorded as count adjustments and the *Expected vs actual* tab opens.

13.7 Branch transfer

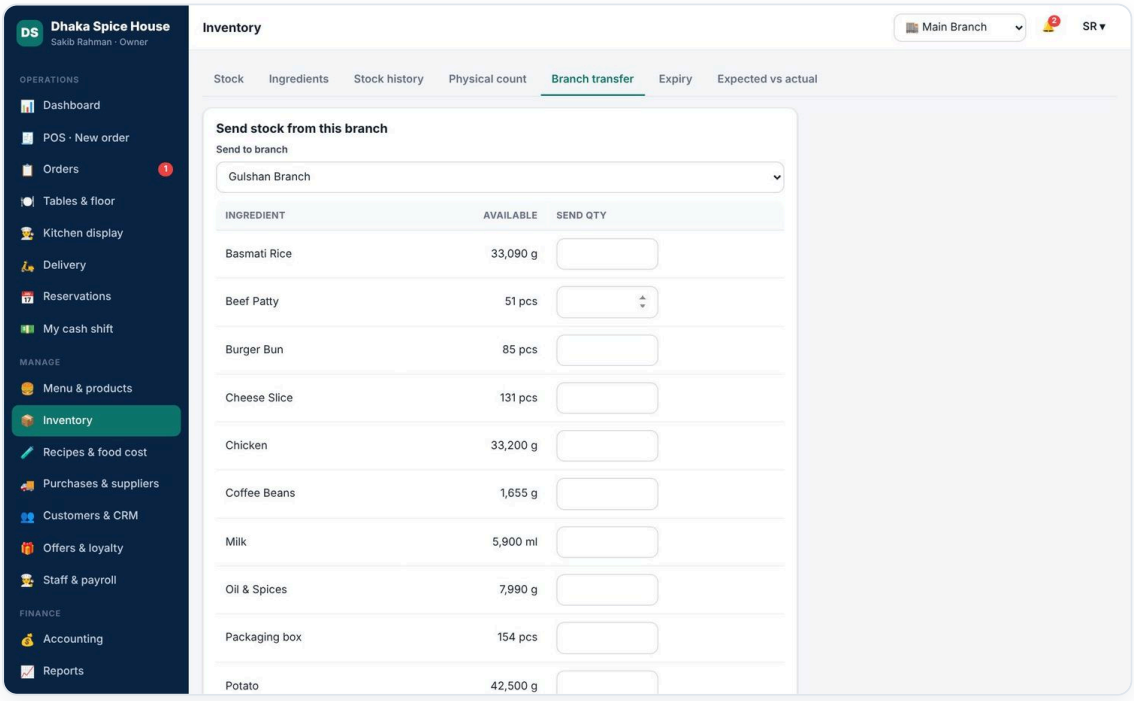

Figure 61 — Send stock to another branch

Choose the receiving branch, type the quantities to send and click **Transfer**. The receiving branch gets a notification.

13.8 Expiry

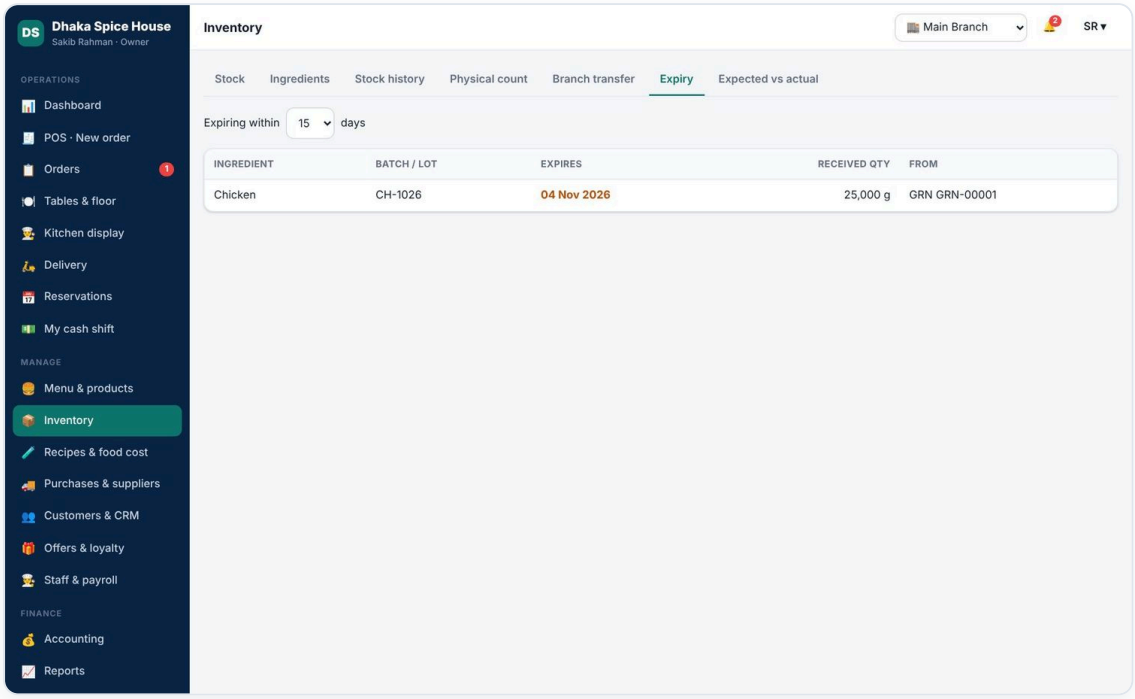

Figure 62 — Items expiring soon

Lists batches received with an expiry date within the next 3–60 days (choose). Expired dates are shown in red. Enter expiry dates when receiving purchases to use this.

13.9 Expected vs actual (variance)

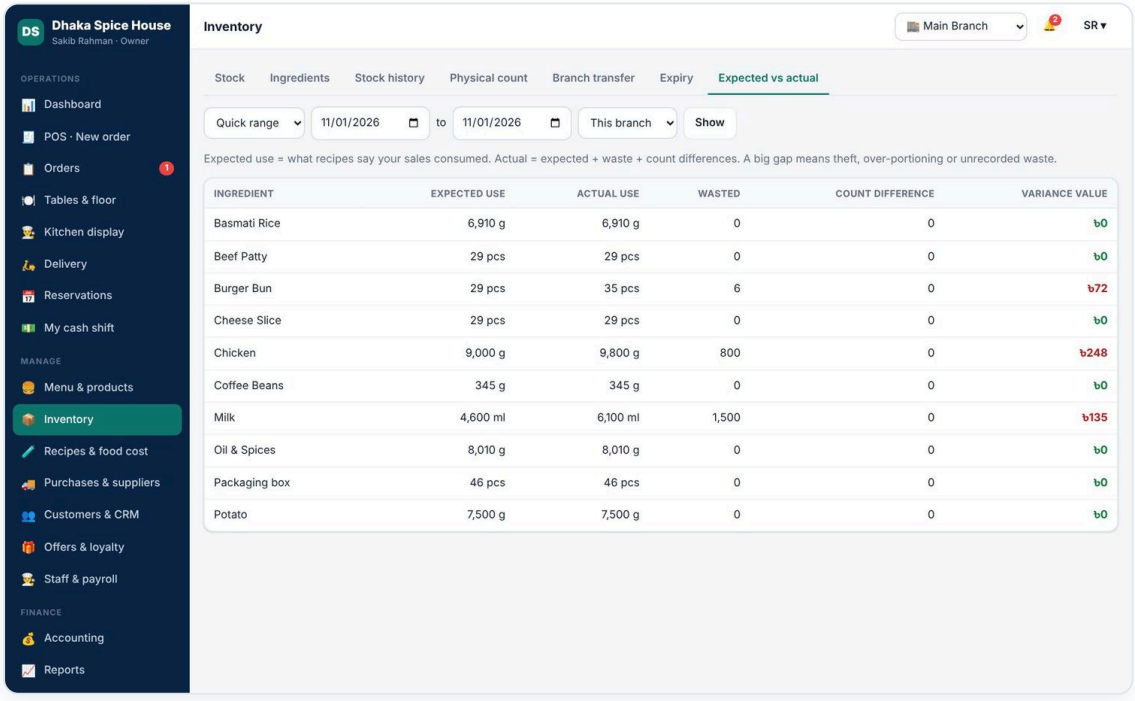

Figure 63 — Expected vs actual usage

Expected use is what your recipes say your sales consumed. **Actual use** adds wastage and count differences. The **variance value** in money shows losses from over-portioning, unrecorded waste or theft. A red value deserves investigation.

14 Recipes & food cost

A recipe lists the ingredients in one portion of a dish. It powers automatic stock deduction and tells you exactly what each dish costs and earns.

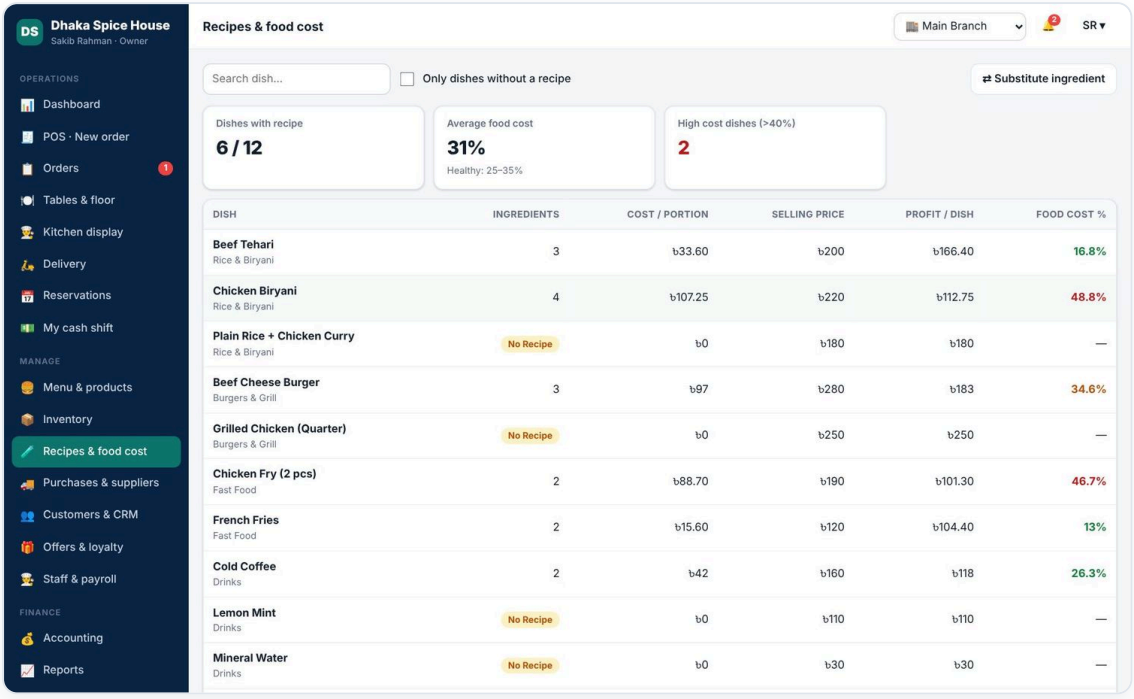

Figure 64 — Recipes & food cost overview

The overview shows how many dishes have a recipe, the **average food cost %** (a healthy range is 25–35%) and the number of high-cost dishes (over 40%). For each dish: number of ingredients (No recipe if missing), cost per portion, selling price, profit per dish and food cost % coloured green, orange or red. Tick **Only dishes without a recipe** to see what is left to do.

14.1 Create or edit a recipe

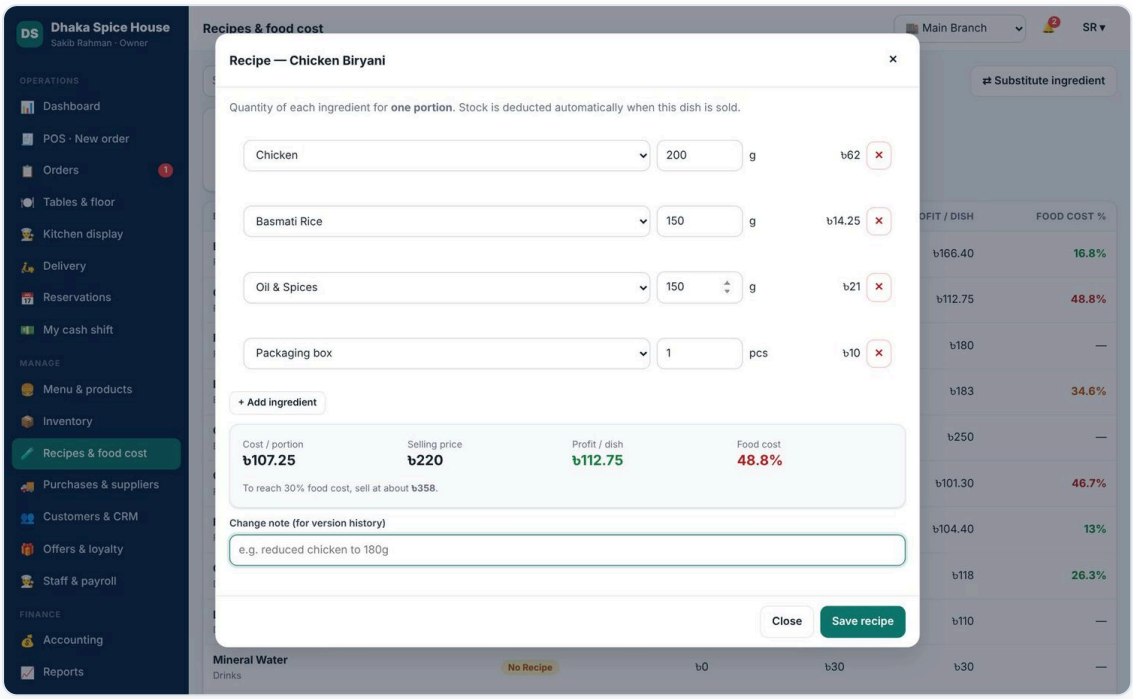

Figure 65 — Recipe editor

1. Click a dish (or **🧪 Recipe** in the product form).
2. Click **+ Add ingredient**, choose the ingredient and type the quantity for **one portion** in the stock unit (g, ml, pcs). The cost of each line is shown.
3. The summary shows **cost per portion**, selling price, **profit per dish**, **food cost %**, and the price you would need for a 30% food cost.
4. Optionally write a change note and click **Save recipe**.

Version history

Every time a recipe is changed, the previous version is saved with the date, the person and the note. Open *Version history* in the editor and click **Restore** to go back.

14.2 Substitute an ingredient everywhere

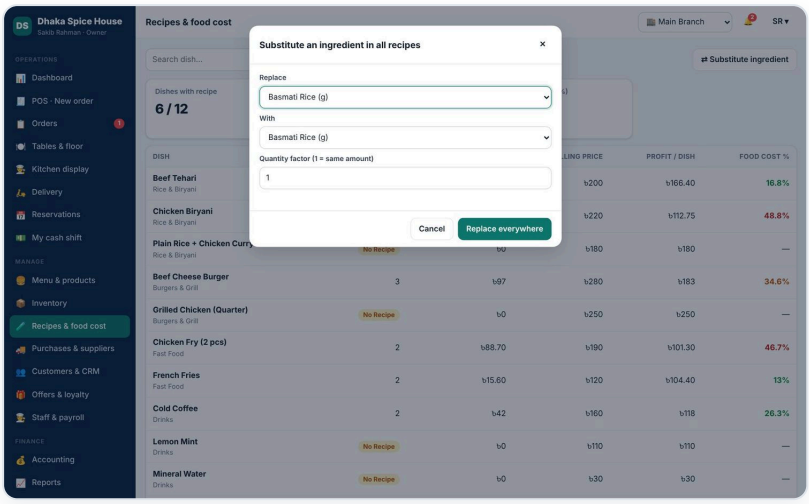

Figure 66 — Ingredient substitution

When you switch suppliers or products (for example one rice brand to another), click **⇄ Substitute ingredient**, choose the old and the new ingredient and a quantity factor (1 = same amount). Every recipe is updated at once.

> ℹ️ Food cost uses the latest purchase cost of each ingredient, so keep purchases up to date. Dishes without a recipe count as zero cost in profit reports.

15 Purchases & suppliers

Record what you buy, receive goods into stock, pay suppliers in full or in parts, and always know what you owe.

15.1 Purchases list

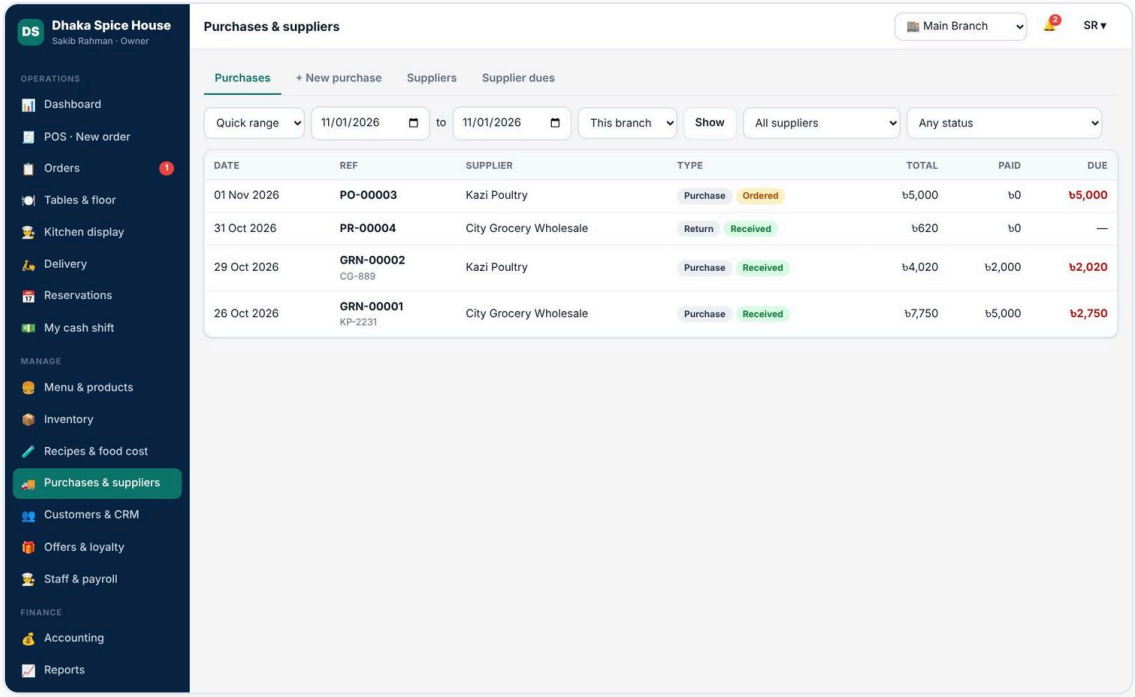

Figure 67 — Purchases

Filter by date, supplier and status. Each row shows the reference (GRN-..., PO-..., PR-...), supplier invoice number, type, status, approval, total, paid and **due** in red. Click a row for details.

15.2 New purchase

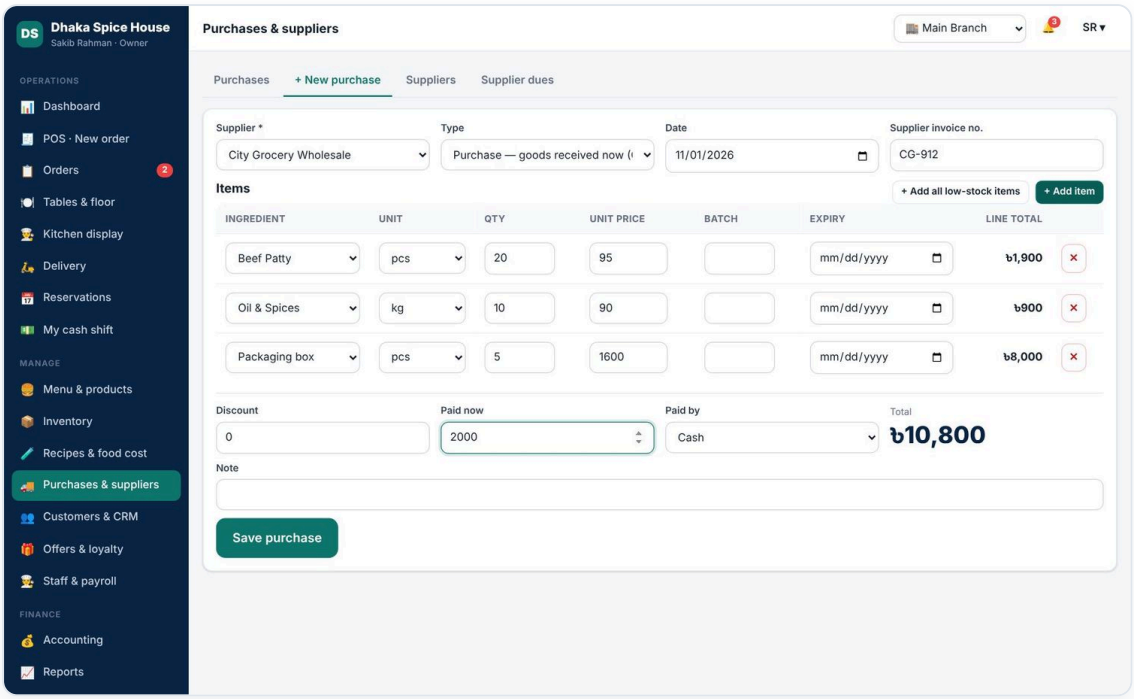

Figure 68 — New purchase form

1. Choose the **Supplier** and **Type**:
   - **Purchase — goods received now (GRN)**: stock goes up immediately.
   - **Purchase order (receive later)**: an order to the supplier; stock goes up when you receive it.
   - **Return goods to supplier**: stock goes down.
2. Set the date and the supplier's invoice number.
3. Click **+ Add item** for each ingredient, or **+ Add all low-stock items**. For each line choose the unit (stock unit or purchase unit), quantity, unit price, and optionally batch and expiry.
4. Enter any discount, the amount **paid now** and how it was paid. The rest becomes due to the supplier.
5. Click **Save purchase**.

15.3 Purchase details: receive, pay, approve

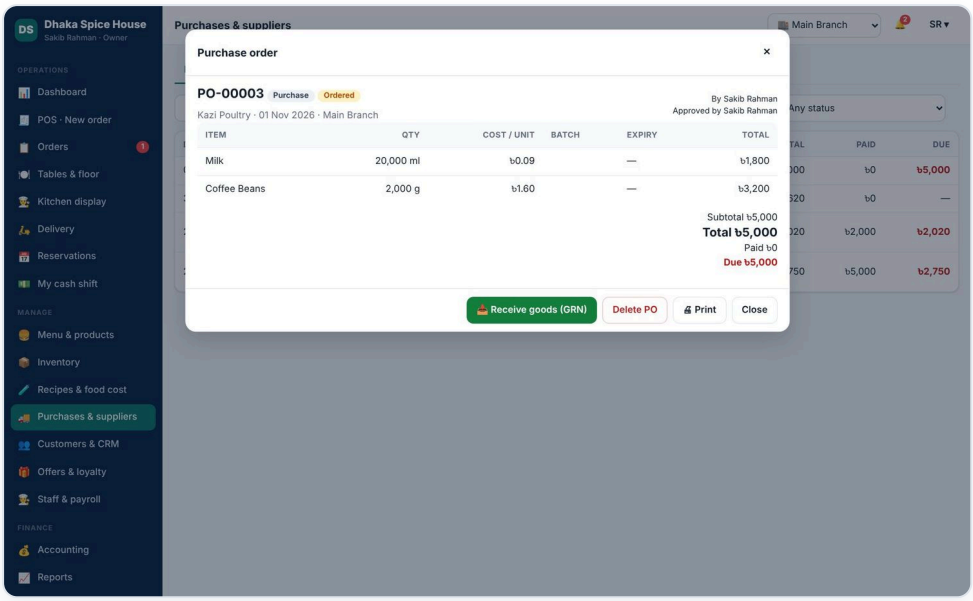

Figure 69 — Purchase order details

- **📥 Receive goods (GRN)** — for purchase orders, when the goods arrive. Stock goes up.
- **Pay supplier** — record a payment against this bill (part or full).
- **✓ Approve** — purchases made by staff without accounting permission show **needs approval** until an owner or accountant approves them.
- **Delete PO** — only for purchase orders not yet received or paid.
- **🖨 Print** — printable purchase order / GRN.

15.4 Suppliers

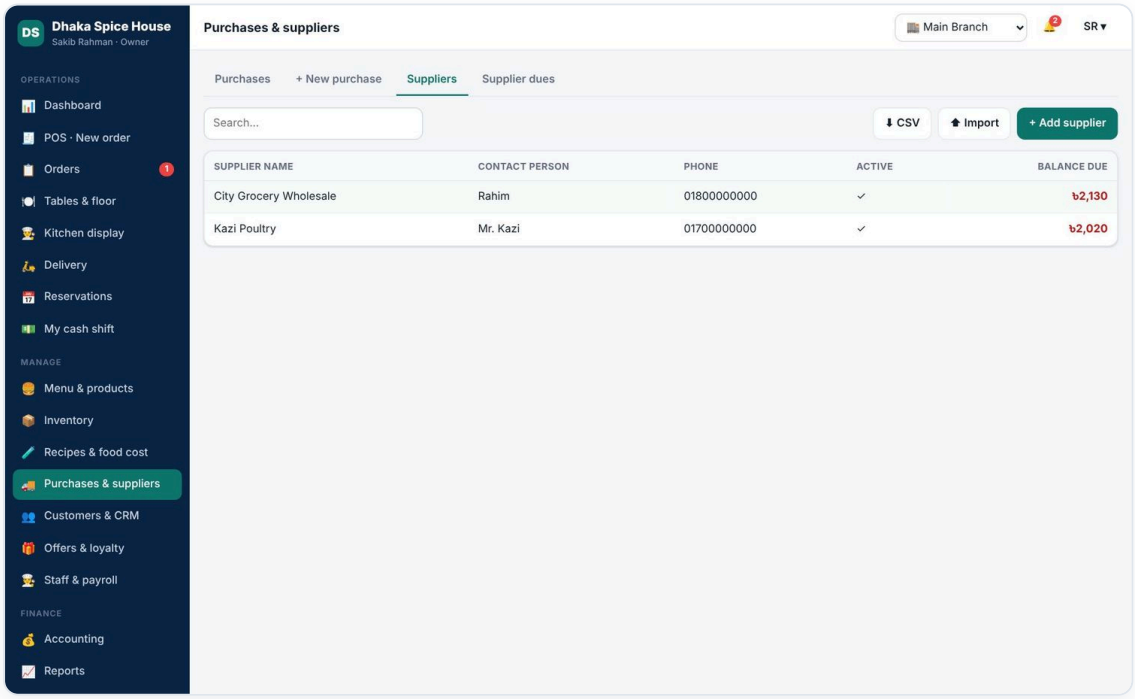

Figure 70 — Suppliers with balance due

Add suppliers with name, contact person, phone, email, address and notes. The list shows the **balance due** to each supplier. Click a supplier and then **📒 Ledger**:

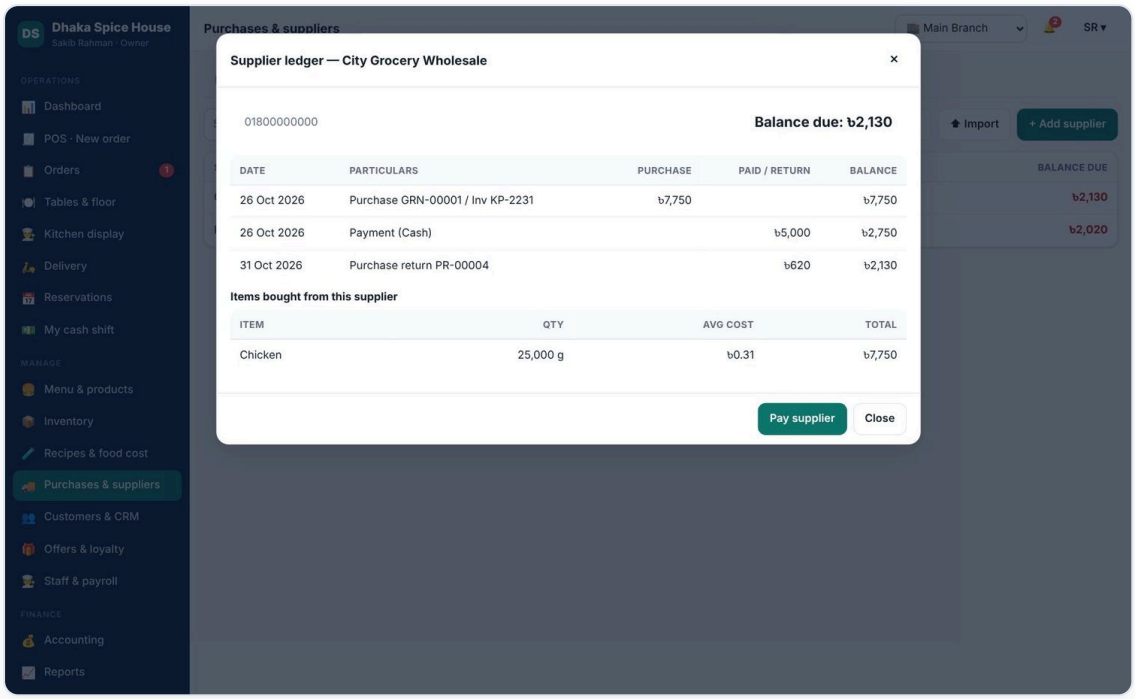

Figure 71 — Supplier ledger

The ledger lists every purchase, return and payment with a running balance, followed by every item you bought from this supplier with quantity, average cost and total.

15.5 Supplier dues and payments

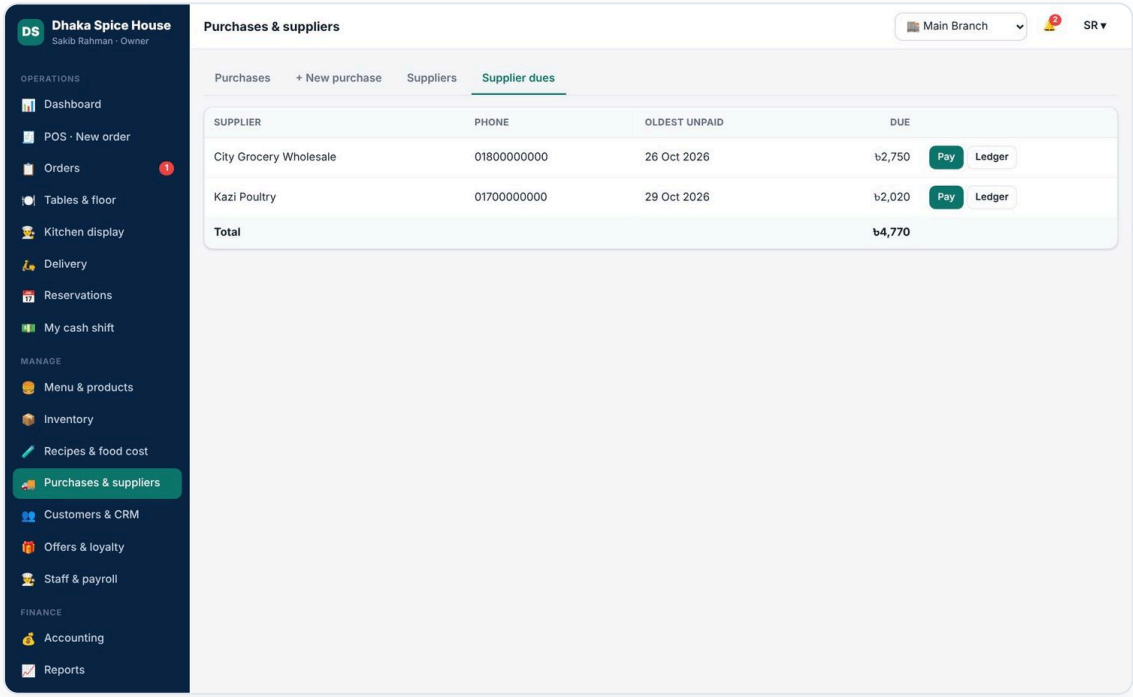

Figure 72 — Supplier dues

Shows what you owe each supplier and since when. Click **Pay**, enter the amount, method, date and note. The payment is applied to the **oldest unpaid bills first**; any extra is saved as an advance.

16 Customers & CRM

Every customer you attach to an order builds a profile automatically: visits, spending, favourite dishes, points and dues.

16.1 Customer list and segments

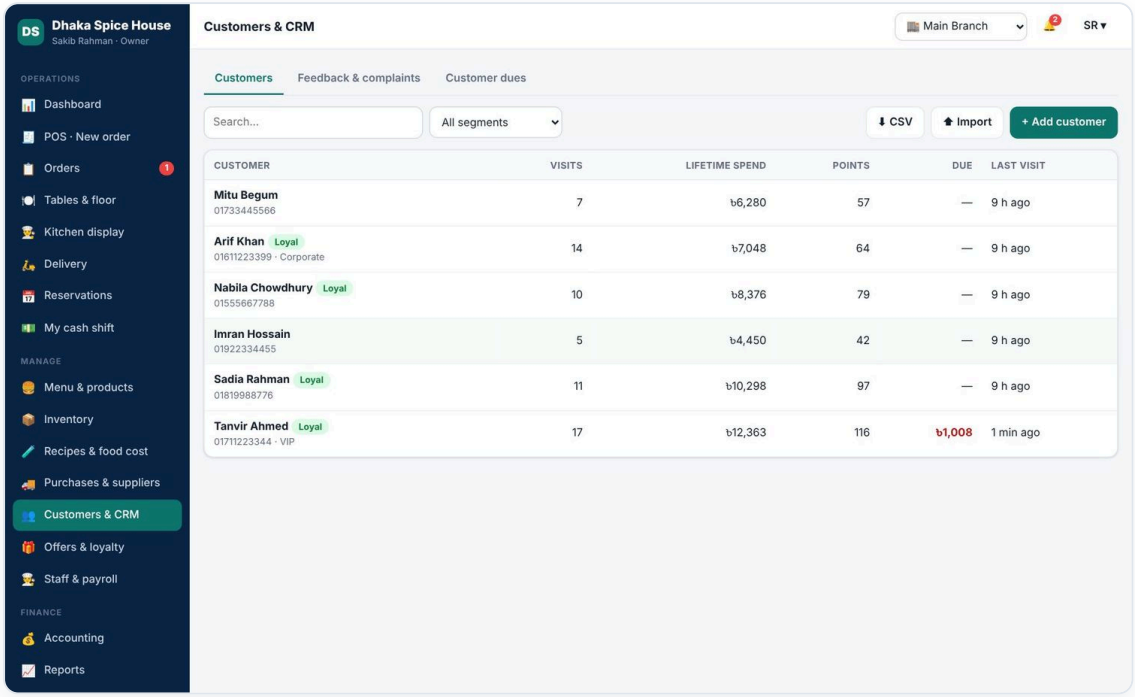

Figure 73 — Customers

Search by name, phone, email or tag. The **segments** filter shows: Loyal (10+ visits), Regular (3–9), New (1–2), Not seen in 60+ days, Has due, and Restricted. Each row shows visits, lifetime spend, points, due and last visit.

16.2 Customer profile

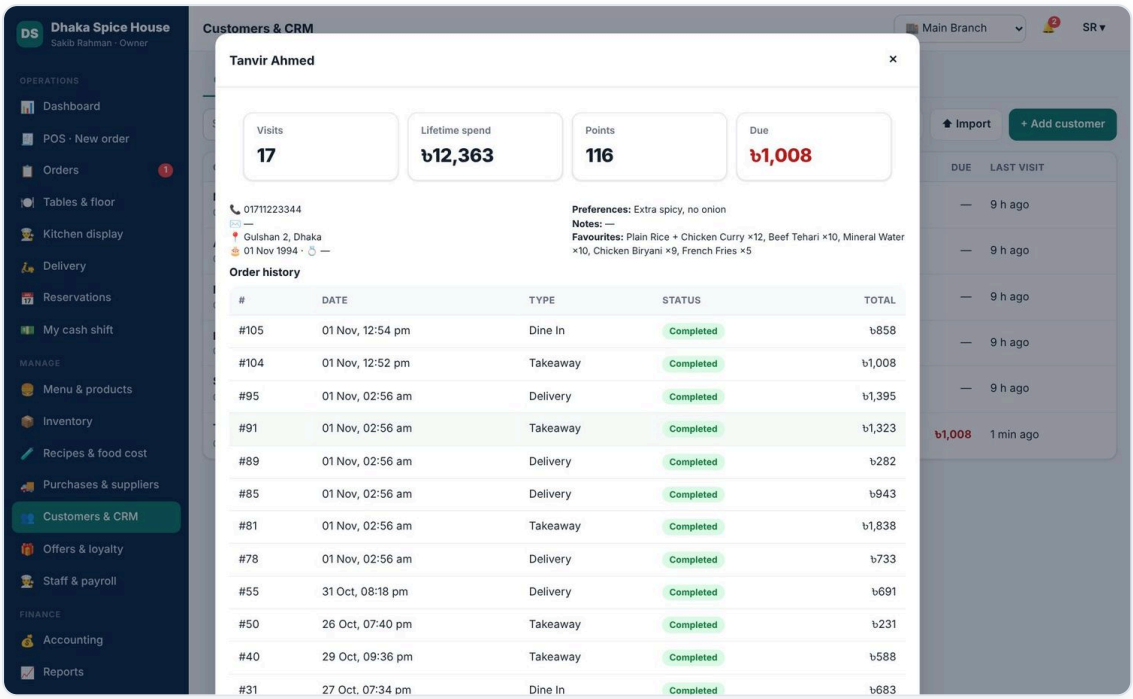

Figure 74 — Customer profile

Click a customer to see visits, lifetime spend, points and due; contact details; birthday and anniversary; preferences and notes; **top 5 favourite dishes**; full order history (click an order to open it) and their feedback. Buttons: **✎ Edit**, **Receive due**, **⭐ Adjust points** (add, or use a minus number to remove).

16.3 Customer details you can record

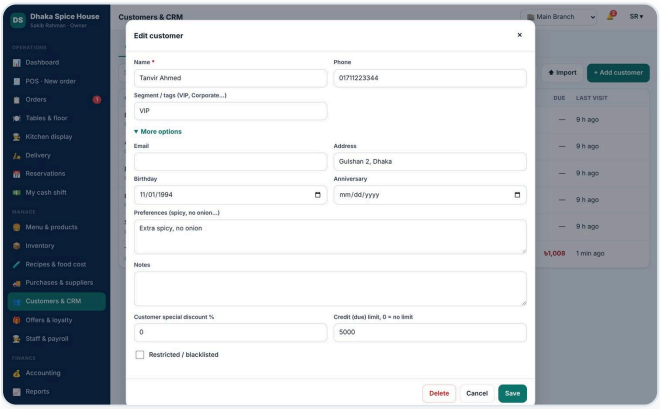

Figure 75 — Edit customer

FIELD	USE
Name, phone, email, address	Contact; address fills delivery orders.
Segment / tags	VIP, Corporate, Student… for filtering.
Birthday, anniversary	Shown on the dashboard on the day.
Preferences	Shown in the POS when the customer is selected (e.g. extra spicy).
Special discount %	Applied automatically to their bills.
Credit (due) limit	Maximum due allowed; 0 = no limit.
Restricted / blacklisted	Cannot be selected for new orders.

16.4 Customer dues

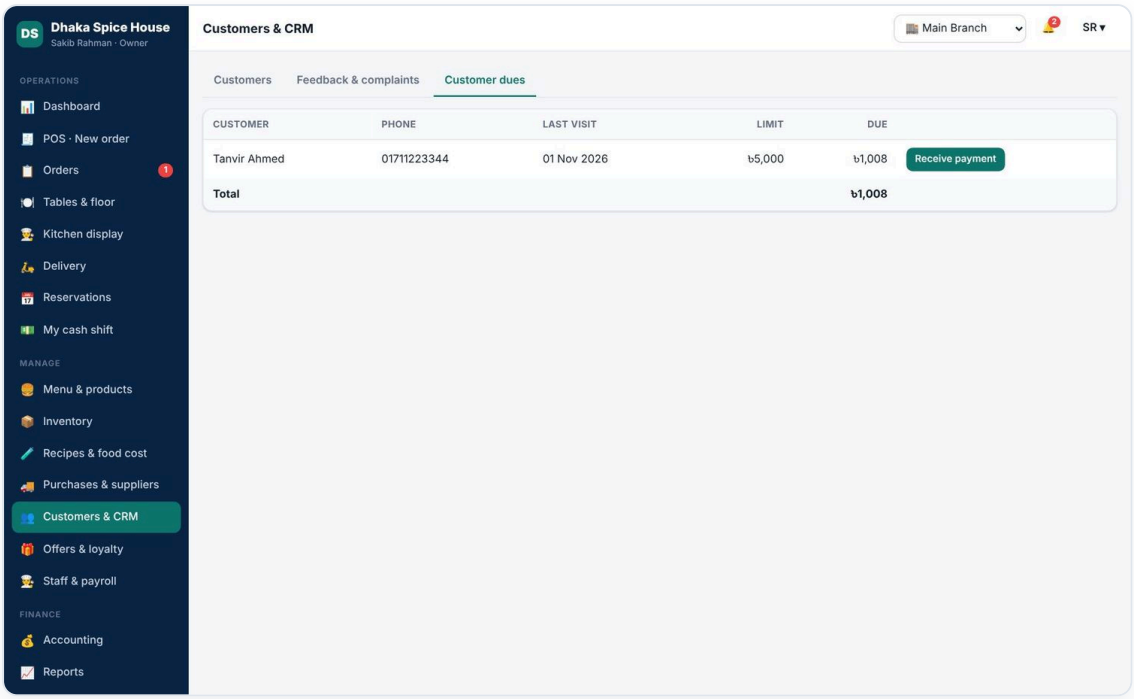

Figure 76 — Customer dues

All customers who owe money from due (credit) sales. Click **Receive payment**, enter the amount and method. Cash received during an open shift is included in that shift's expected cash.

16.5 Feedback & complaints

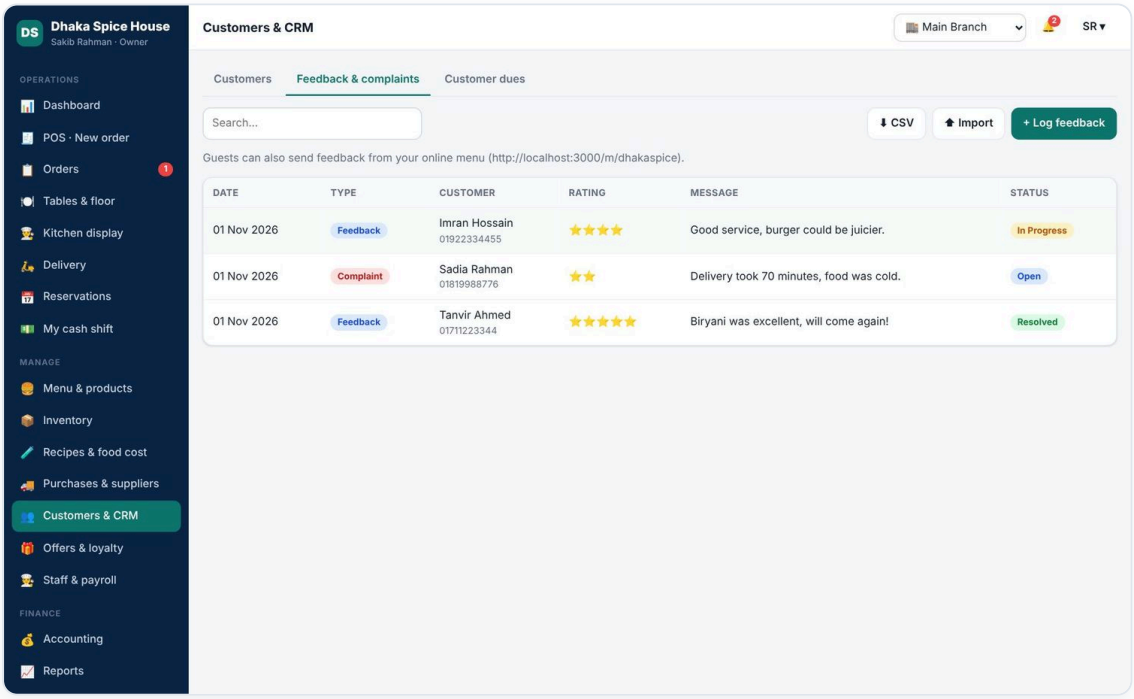

Figure 77 — Feedback & complaints

Guests can send a star rating, feedback or a complaint from your online menu; you get a notification. You can also log feedback received by phone. Set the status to **in progress** or **resolved** as you follow up.

17 Offers & loyalty

Bring guests back with coupons, buy-one-get-one deals, happy hours, customer discounts and loyalty points.

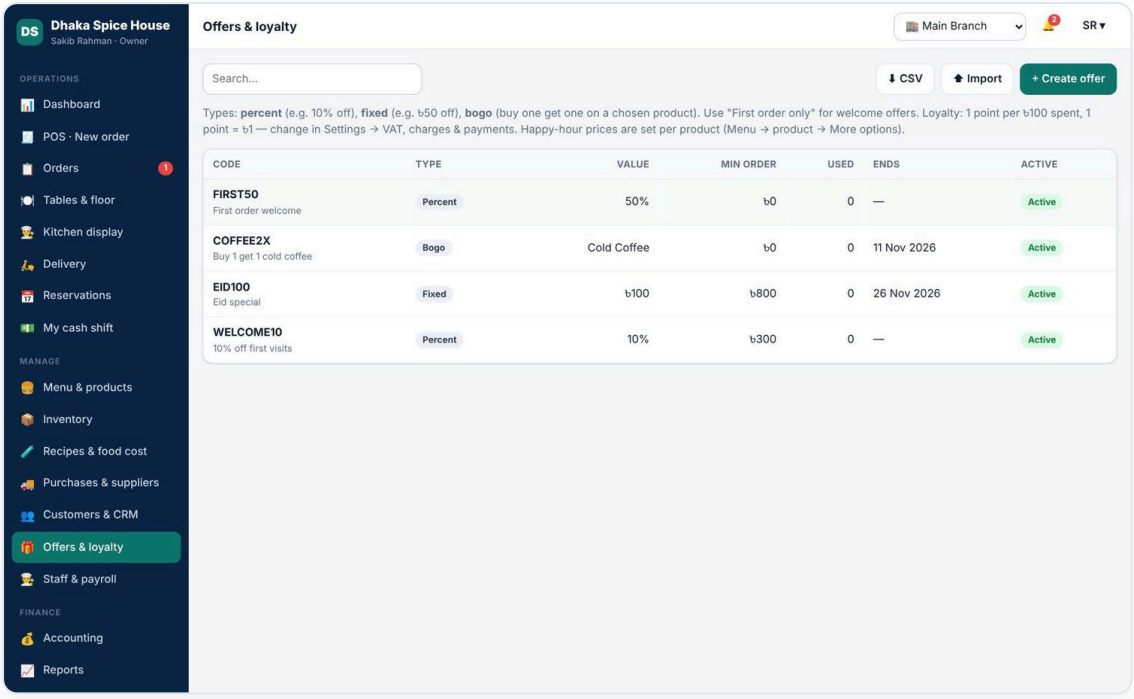

Figure 78 — Offers & coupons

17.1 Create a coupon

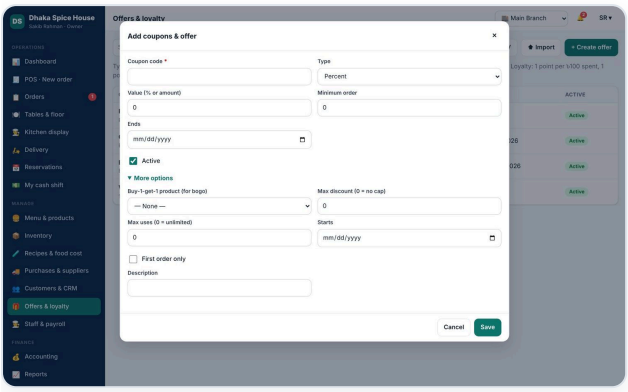

Figure 79 — New coupon

FIELD	MEANING
Coupon code	What the guest or cashier types, e.g. EID100 (capital letters).
Type	**percent** — % off; **fixed** — amount off; **bogo** — buy one get one free on the chosen product.
Value	The % or amount.
Buy-1-get-1 product	For bogo: every second unit of this product is free.
Minimum order	Bill must be at least this much.
Max discount	Cap for % coupons (0 = no cap).
Max uses	Total uses allowed (0 = unlimited). *Used* counts them.
Starts, Ends	Valid dates.
First order only	Only for a customer's first completed order.
Active	Switch the offer on or off.

Coupons work at the POS and on the online menu. Show your current offer on the online menu and menu board with the **promotional banner** (Settings → QR & online ordering).

17.2 Other ways to give offers

OFFER	WHERE TO SET IT
Happy hour	Per product: Menu → product → More options → Happy-hour price and hours. Applied automatically.
Combo / meal deal	Create a product (e.g. "Biryani + Borhani Combo") with its own price and describe it in *Combo / bundle includes*.
Customer-specific pricing	Customer → Special discount %.
Manual discount	POS → 🏷 Discount (needs permission or manager PIN).
Referral / membership	Use tags (e.g. "Member") and a coupon or special discount for that group.

17.3 Loyalty points

Set in **Settings → VAT, charges & payments → Loyalty points**:

- **1 point for every …** — for example 100 means a ৳1,250 bill earns 12 points.
- **1 point is worth …** — the taka value when redeemed, for example 1.

Points are earned automatically when a bill with a customer is fully paid, and redeemed with the ⭐ **points** button in the POS. Points can be adjusted manually from the customer profile.

18 Staff & payroll

Attendance, schedules, leave, salary and advances in one place. Staff logins themselves are managed in Settings → Staff logins.

18.1 Attendance today

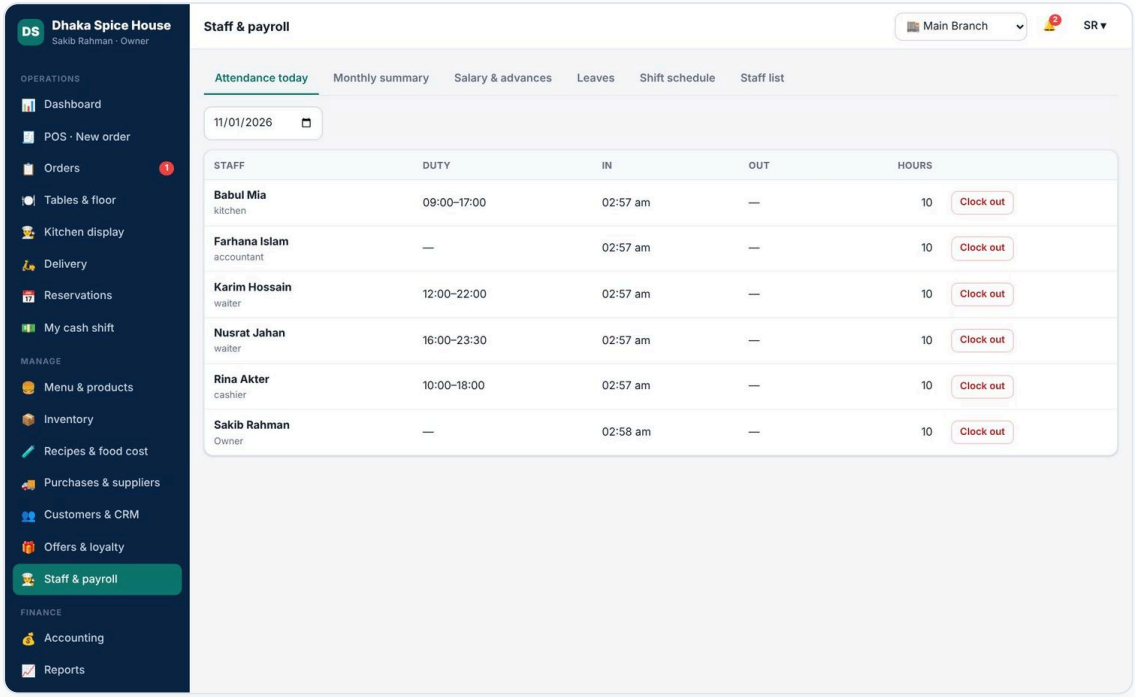

Figure 80 — Attendance

Every active staff member with today's duty time (or **On leave**), clock-in and clock-out times and hours worked. Managers can press **Clock in** / **Clock out** for anyone, choose another date to view, and **Edit** times to correct mistakes (every correction is logged).

18.2 Shift schedule

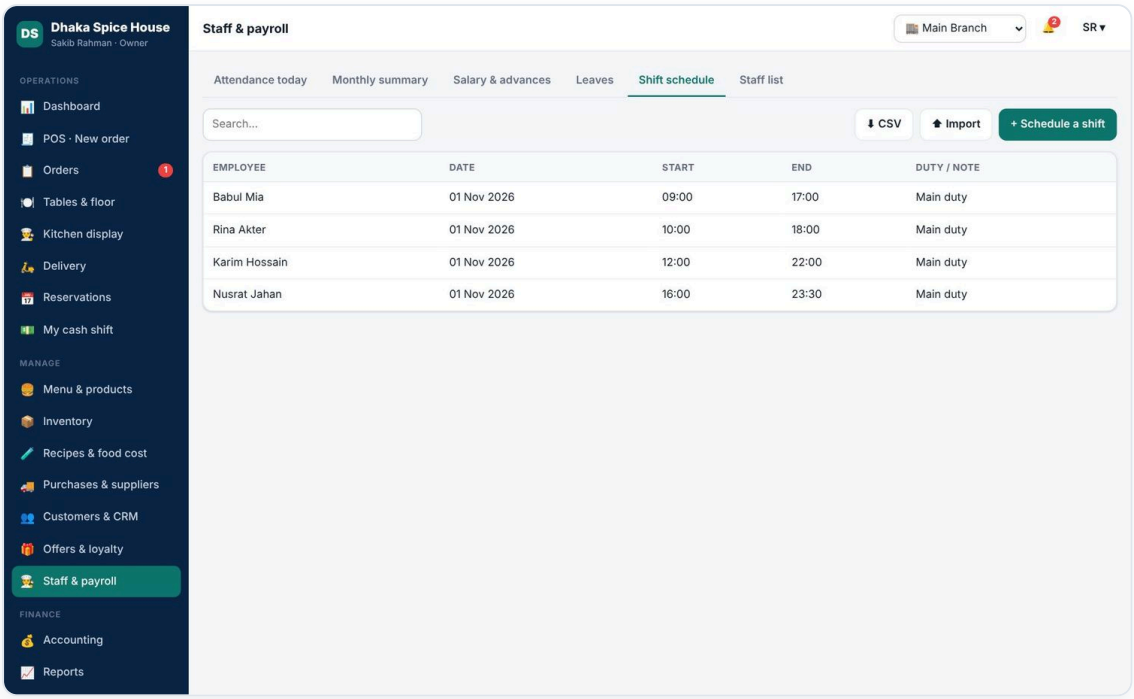

Figure 81 — Shift schedule

Plan duty times per person per day (date, start, end, duty note). Each person sees their duty on the Clock in screen.

18.3 Leaves

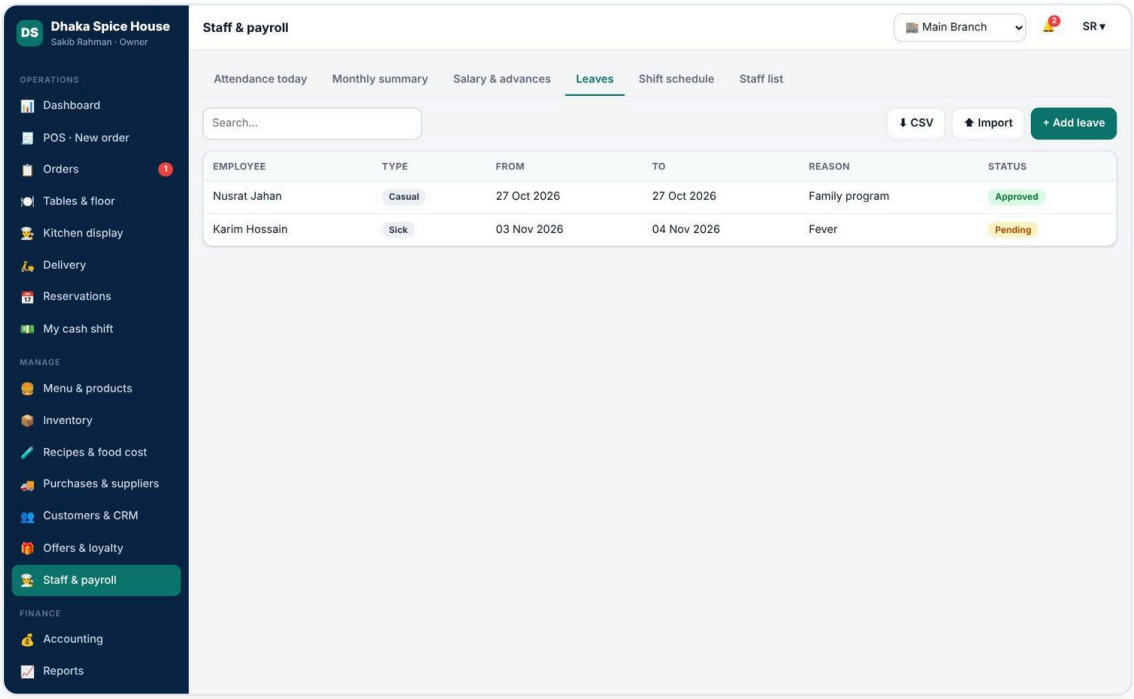

Figure 82 — Leave requests

Record leave with type (casual, sick, annual, unpaid), dates and reason, and set the status to approved or rejected. Approved leave shows on the attendance page and in the monthly summary.

18.4 Salary & advances

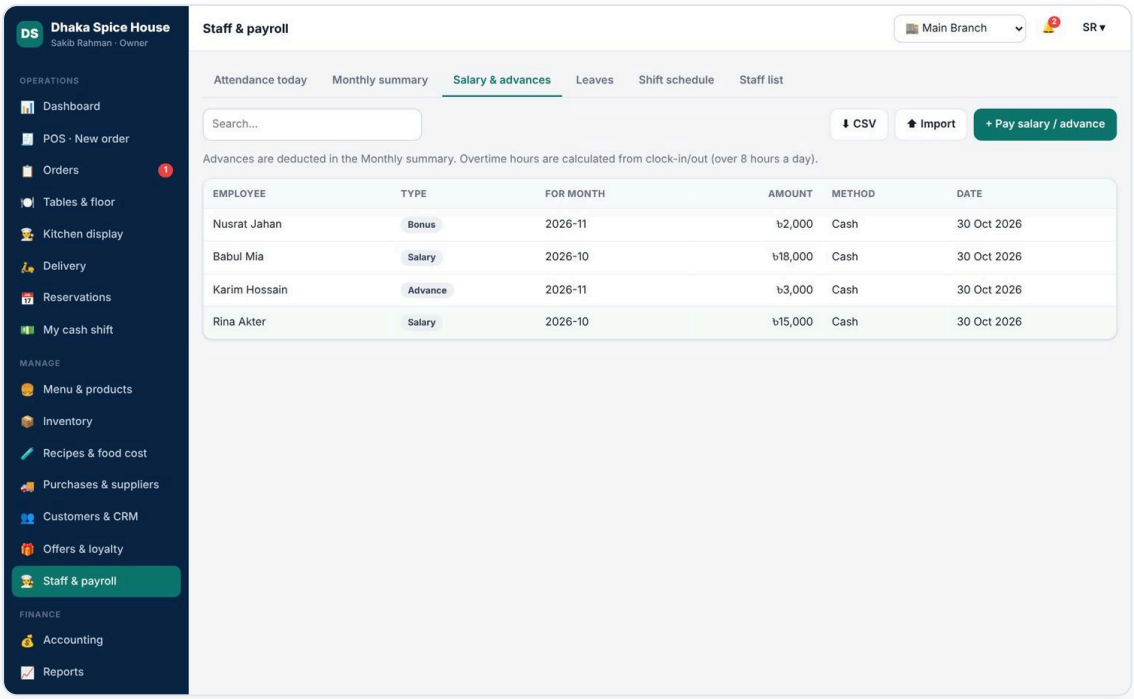

Figure 83 — Salary & advances

Record every payment to staff with type — **salary**, **advance**, **bonus**, **overtime**, **deduction** — the month it belongs to, amount, method and date.

18.5 Monthly summary (payroll sheet)

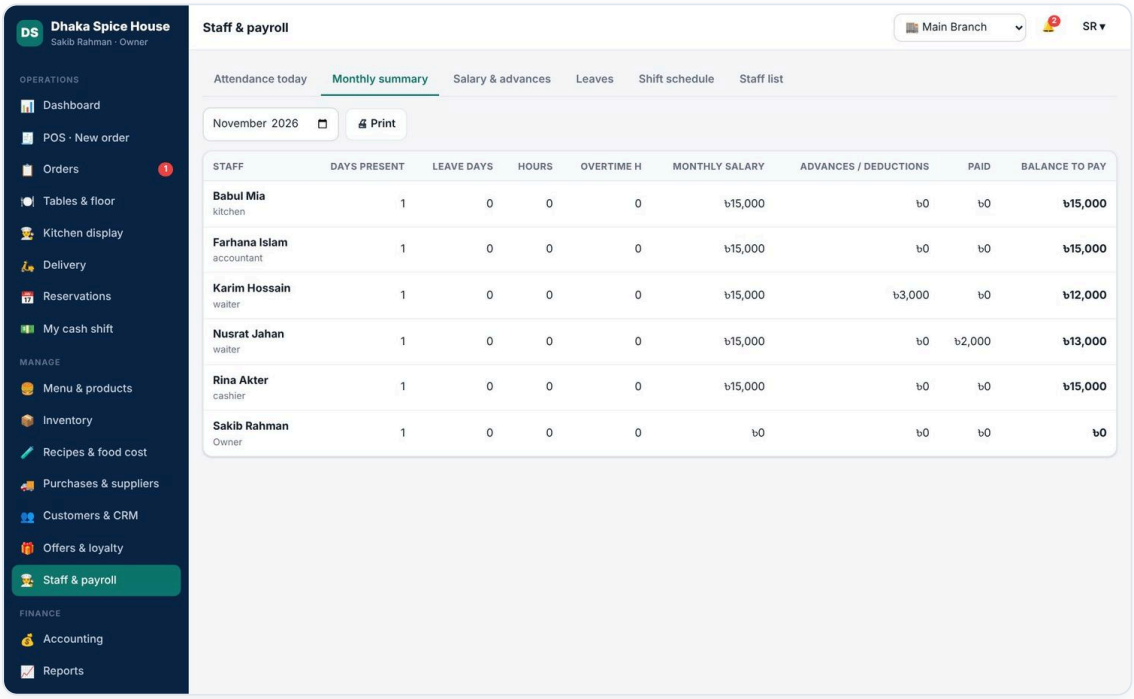

Figure 84 — Monthly payroll summary

For the chosen month: days present, leave days, total hours, **overtime hours** (hours over 8 per day), monthly salary, advances and deductions, amount already paid, and the **balance to pay** (salary − advances/deductions − paid). Click **🖨 Print** for a payroll sheet.

19 Accounting

Your sales, purchases, expenses and payments are recorded automatically. The Accounting section turns them into a profit & loss statement, cashbook, VAT report and balances.

19.1 Profit & loss

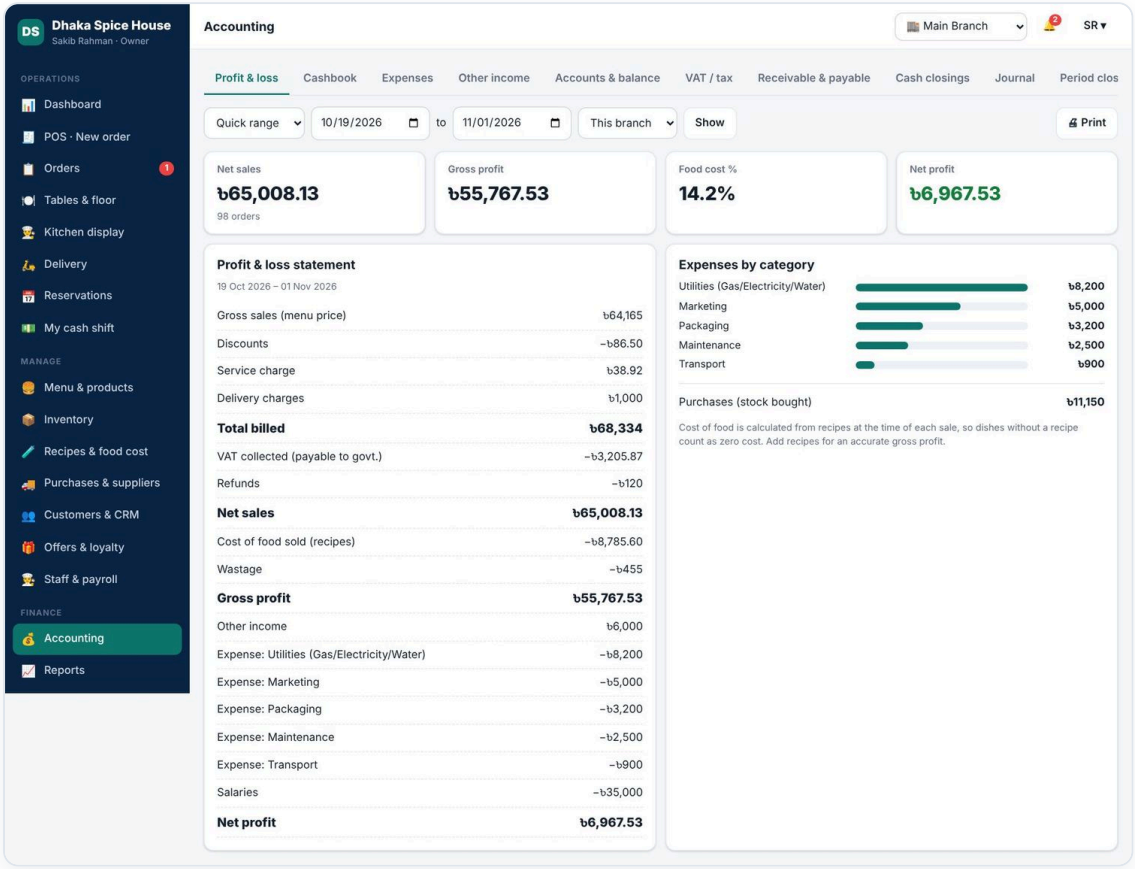

Figure 85 — Profit & loss for a date range

Choose a date range (or a quick range: today, yesterday, last 7 / 30 days, this month, last month, this year) and optionally *All branches*. The statement shows:

LINE	MEANING
Gross sales	Menu value of everything sold.
Discounts, service charge, delivery charges	From completed orders.
Total billed	What guests were charged.
VAT collected	Payable to the government, so it is taken out.
Refunds	Money returned.
Net sales	Your real sales income.
Cost of food sold	From recipes at the time of each sale.

Wastage	Value of wasted and damaged stock.
Gross profit	Net sales − food cost − wastage.
Other income, expenses by category, salaries	From the Income, Expenses and Salary pages.
Net profit	What the business earned in the period.

The cards at the top show net sales, gross profit, **food cost %** and net profit; the right side shows expenses by category and total purchases.

19.2 Cashbook

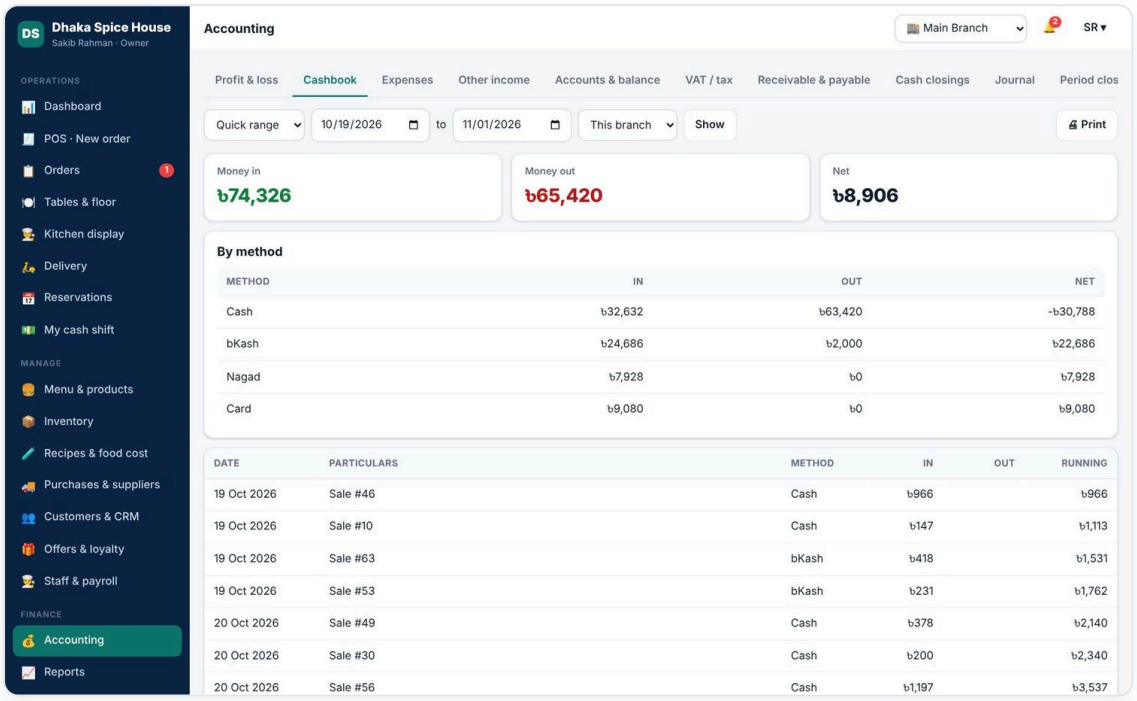

Figure 86 — Cashbook

Every movement of money in date order with a running balance: sale payments, due collections, other income, refunds, expenses, supplier payments, salaries and drawer cash in/out. A summary **by method** shows the in, out and net for Cash, bKash, Nagad, Card, Bank, etc. — useful for reconciling with your bKash statement or bank.

19.3 Expenses

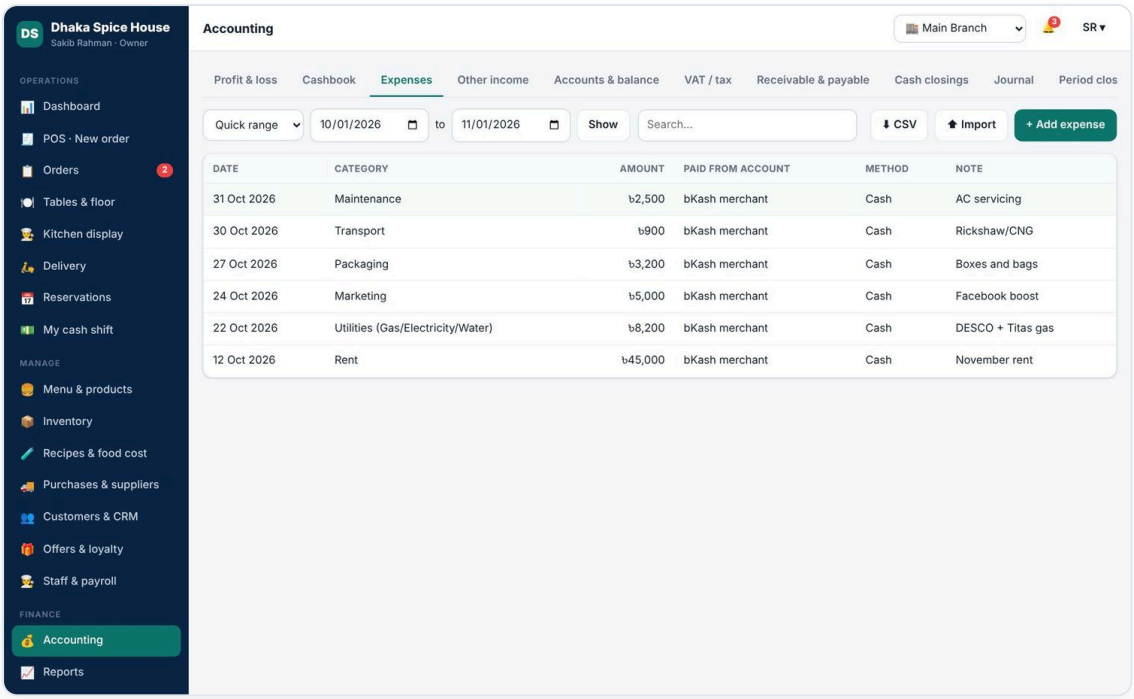

Figure 87 — Expenses

Record each expense with date, category, amount, the account it was paid from, method and note. Tick **Petty cash** for small daily spends. Manage categories (rent, utilities, salary, marketing, maintenance, transport, packaging…) in the **Expense categories** tab.

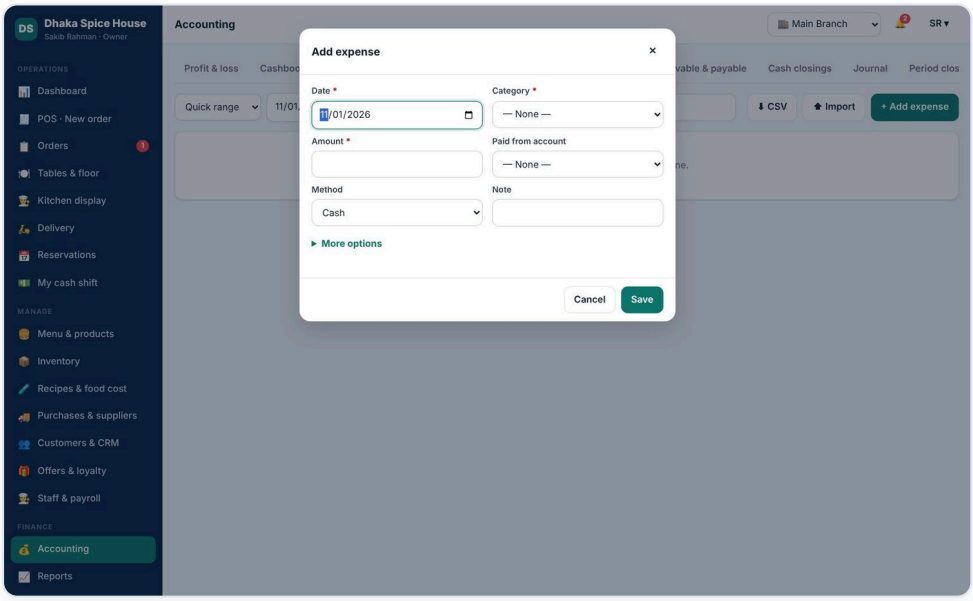

Figure 88 — Add expense

19.4 Other income

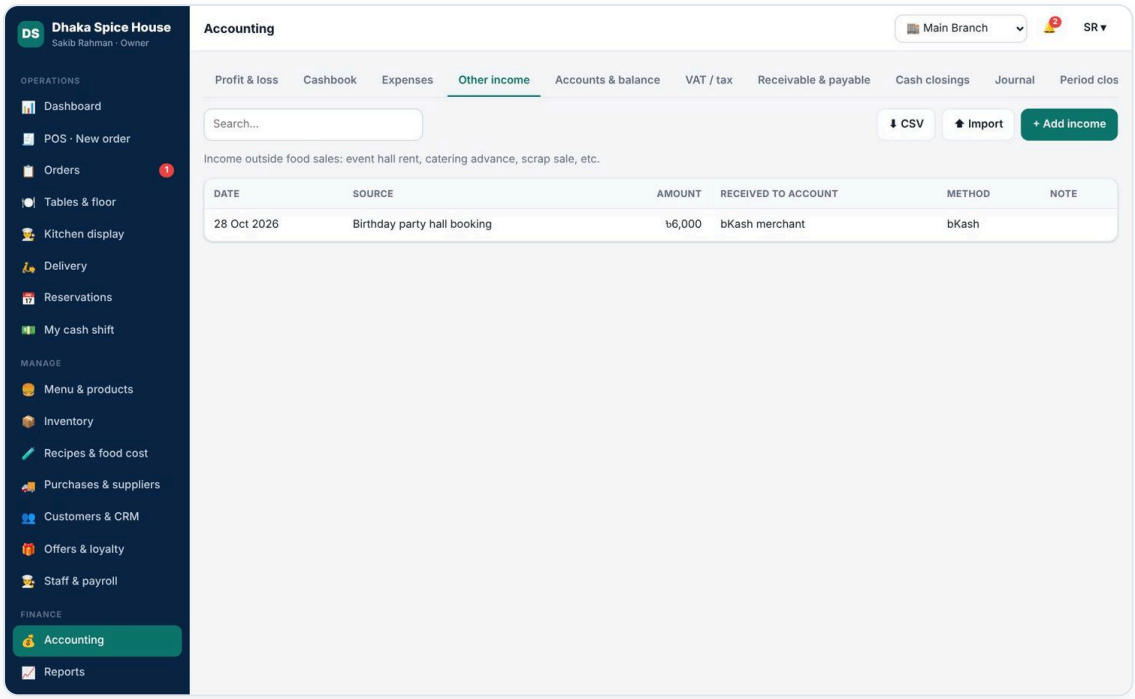

Figure 89 — Other income

Income that is not food sales — hall booking, catering advance, scrap sale, sponsorship.

19.5 Accounts & balance

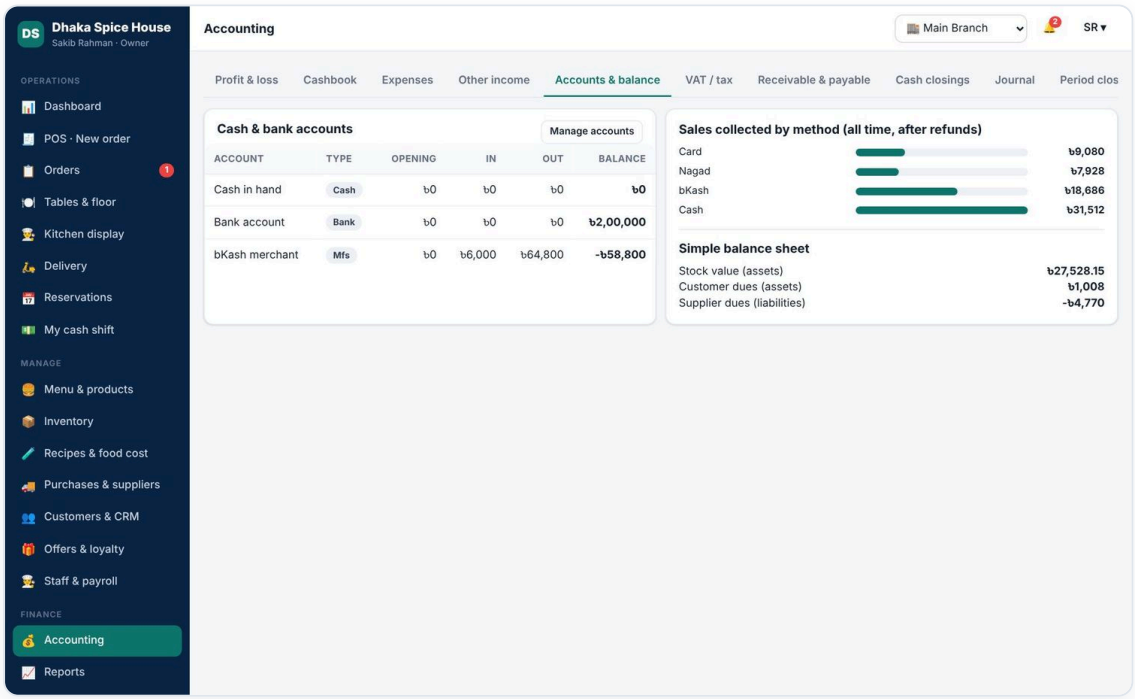

Figure 90 — Accounts & balance

Your cash, bank and mobile-banking accounts with opening balance, money in, money out and current balance (click *Manage accounts* to add or edit them). Also: sales collected by payment method (after refunds) and a simple balance sheet — stock value and customer dues (assets) and supplier dues (liabilities).

19.6 Journal entries

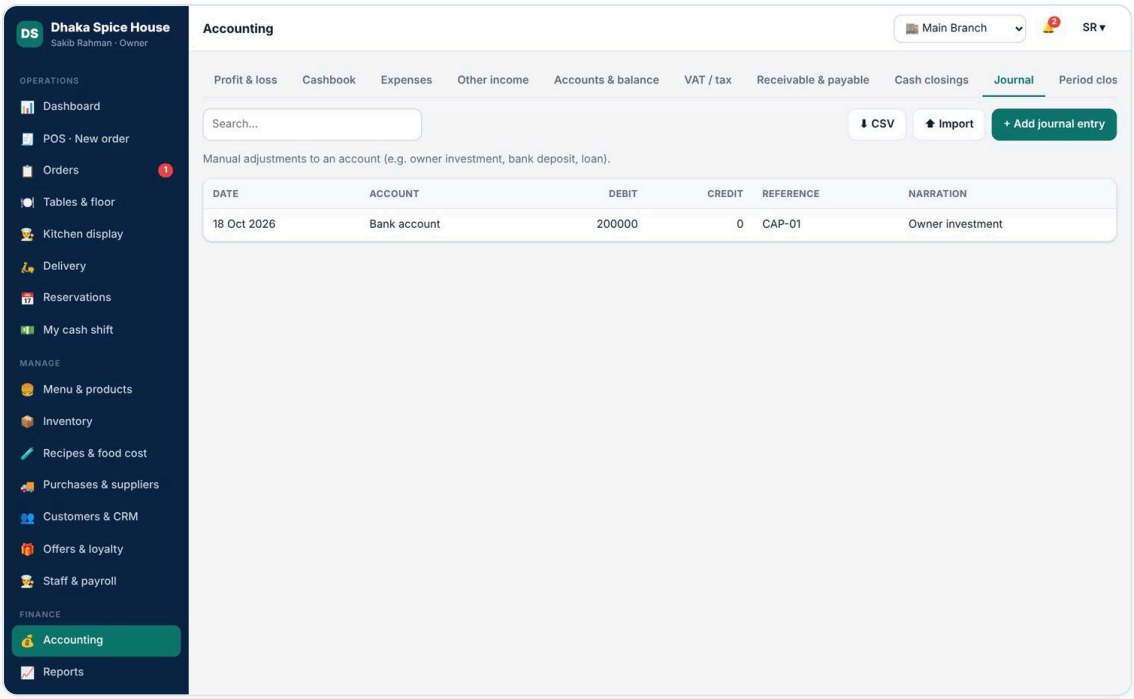

Figure 91 — Journal

Manual adjustments to an account — owner investment, bank deposit or withdrawal, loan received or repaid. **Debit** = money into the account, **credit** = money out.

19.7 VAT / tax report

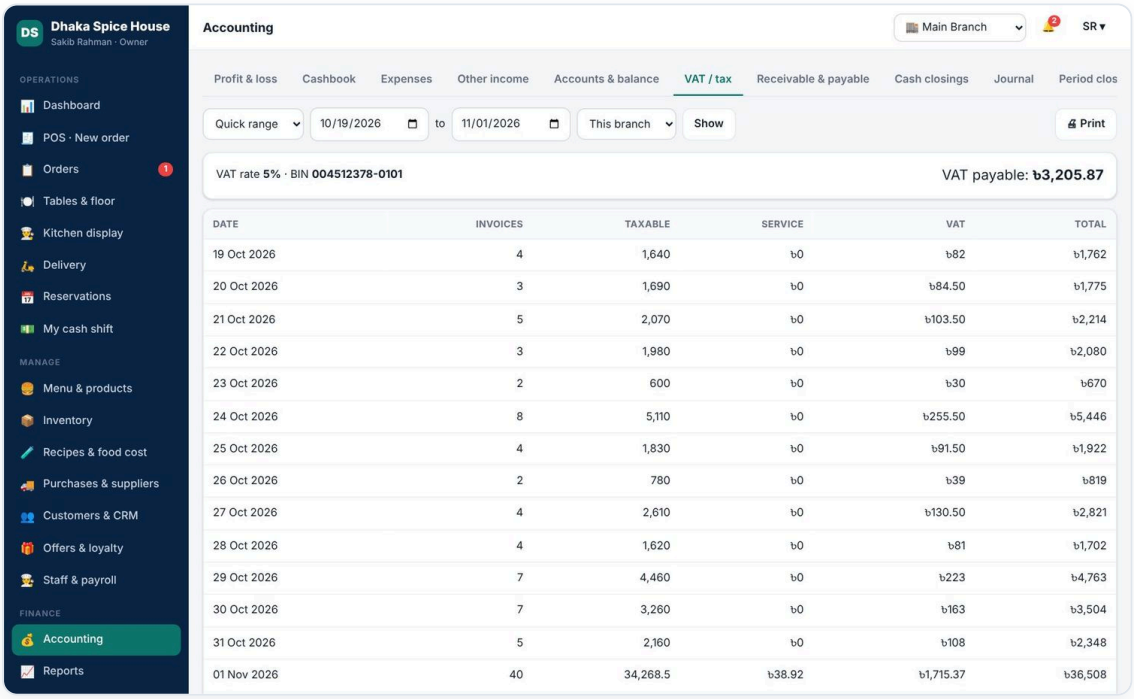

Figure 92 — VAT report

Per day: invoices, taxable value, service charge, VAT and total, with the VAT rate, BIN and total **VAT payable** for the period — ready for your VAT return.

19.8 Receivable & payable

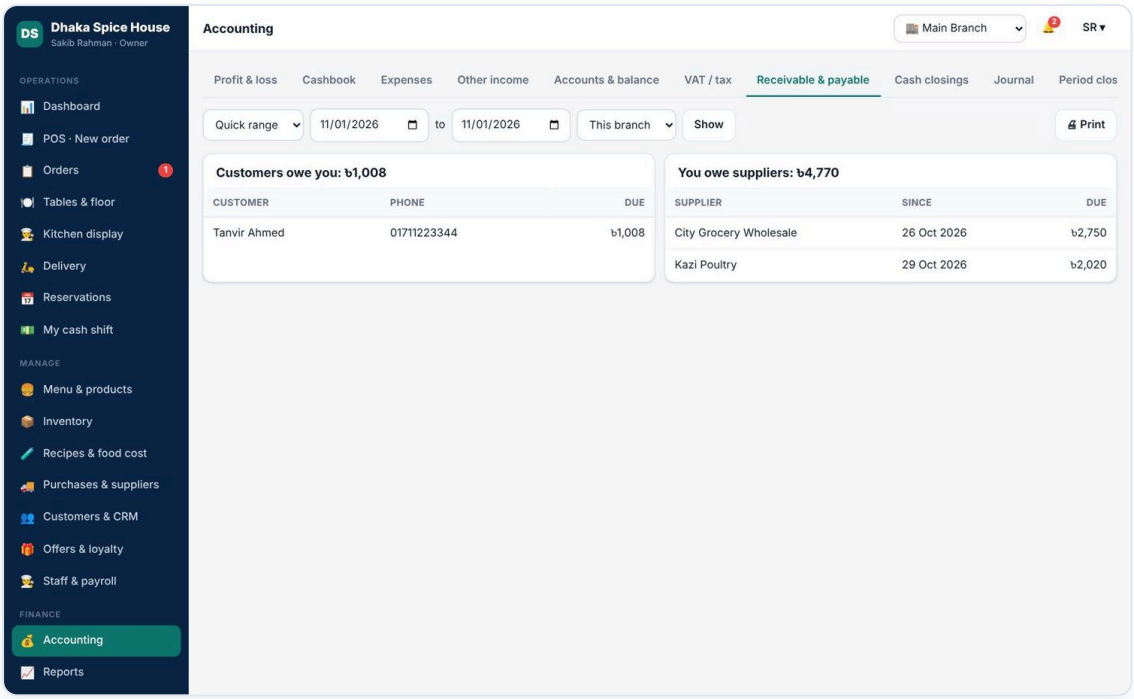

Figure 93 — Receivable & payable

What customers owe you and what you owe suppliers, side by side.

19.9 Cash closings

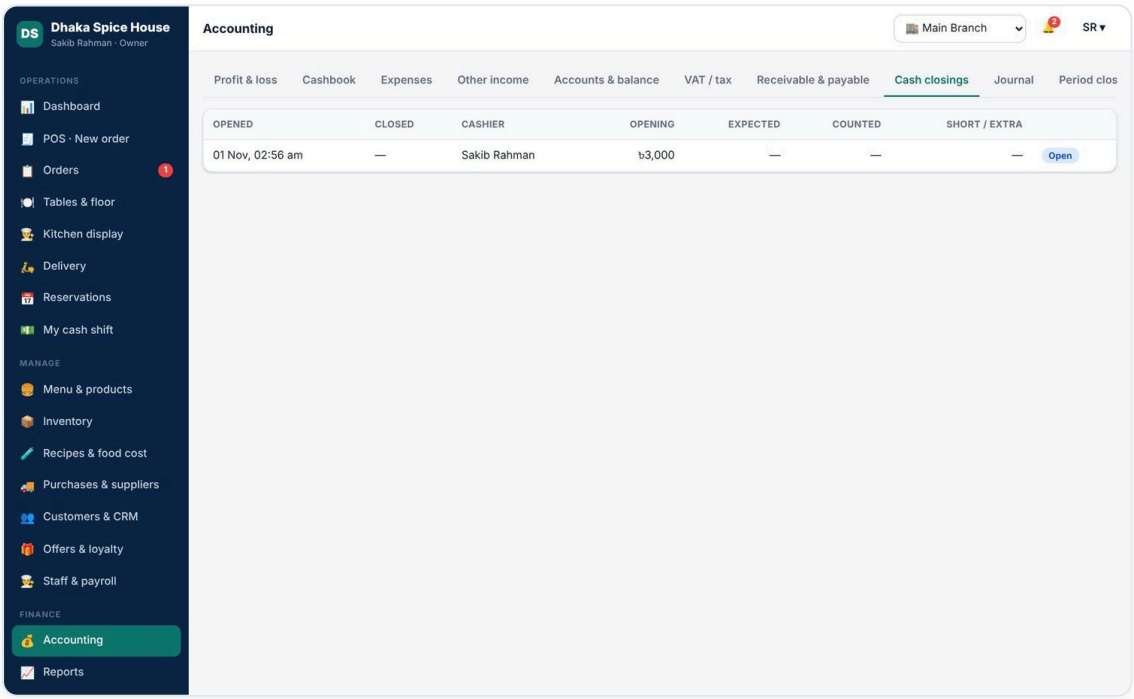

Figure 94 — Cash closings

Every cashier shift with opening, expected and counted cash and the **short / extra** amount. Click a shift for its breakdown.

19.10 Period closing

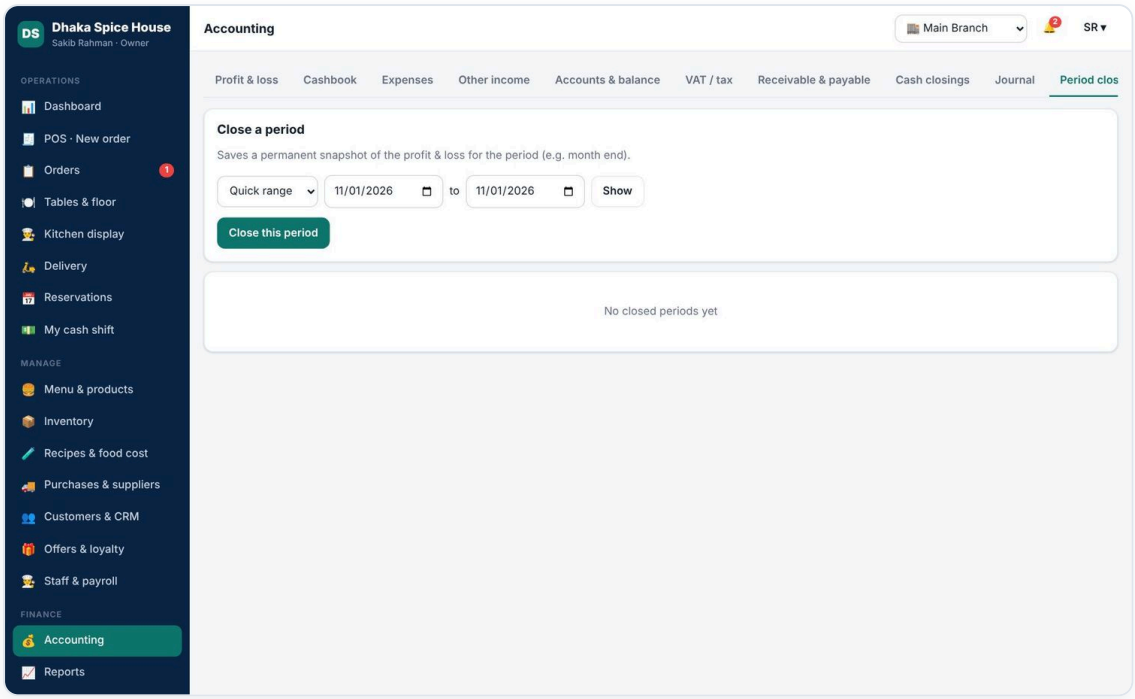

Figure 95 — Period closing

At month end, choose the dates and click **Close this period**. A permanent snapshot of that period's profit & loss is saved with your name, so the figures you reported are kept even if records are corrected later.

20 Reports

27 ready-made reports. Every report has a date range, an *All branches* option (for owners), a chart where useful, totals, **⬇ CSV** export for Excel and **🖨 Print**.

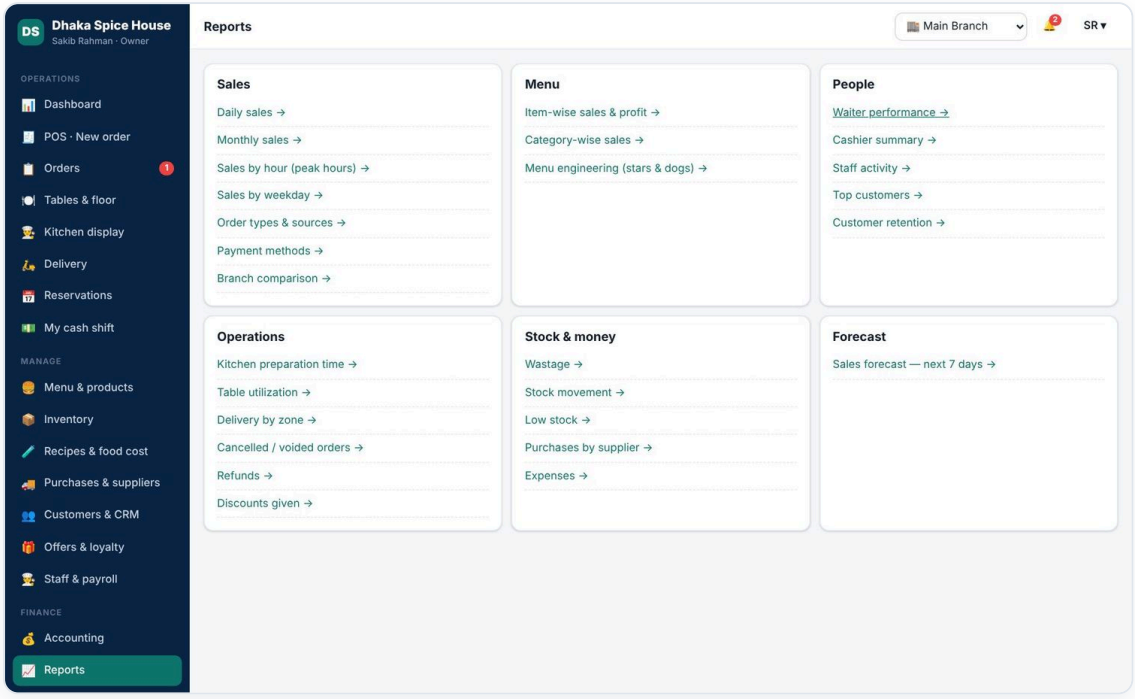

Figure 96 — All reports

REPORT	WHAT IT TELLS YOU
SALES	
Daily sales	Orders, gross, discounts, service, VAT, delivery, total, food cost, gross profit, average ticket and refunds per day.
Monthly sales	The same per month for the last two years.
Sales by hour	Your peak hours — plan staff accordingly.
Sales by weekday	Busiest and quietest days.
Order types & sources	Dine-in vs takeaway vs delivery; walk-in vs Foodpanda vs QR vs online.
Payment methods	Cash, card, bKash, Nagad… totals.
Branch comparison	Orders, sales, cost, gross profit and average ticket per branch.
MENU	
Item-wise sales & profit	Quantity, revenue, cost, profit and food cost % per dish — best and least selling.
Category-wise sales	The same per category.

Menu engineering	Classifies every dish: ⭐ Star (popular and profitable — promote), 🐴 Plowhorse (popular, low profit — raise price or cut cost), ❓ Puzzle (profitable, not popular — promote), 🐶 Dog (consider removing).
PEOPLE	
Waiter performance	Orders, sales, average ticket and guests per waiter.
Cashier summary	Orders, sales and discounts given per cashier.
Staff activity	Orders, sales, days present, hours, actions and refunds per person.
Top customers	Spend, orders, points, due and segment.
Customer retention	New vs returning customers per month.
OPERATIONS	
Kitchen preparation time	Items, average and maximum preparation minutes, delayed and cancelled items per station.
Table utilization	Orders, sales, guests and average sitting minutes per table.
Delivery by zone	Orders, delivered, failed, charges and value per zone.
Cancelled / voided orders	Every cancelled or rejected order with reason, items and cashier.
Refunds	Every refund with amount, method, reason, who did it and who approved it.
Discounts given	Every discounted bill with discount, coupon, points and cashier.
STOCK & MONEY	
Wastage	Quantity and value of wasted, damaged and staff-meal stock.
Stock movement	In, out, purchased, used in sales and wasted per ingredient.
Low stock	Items at or below minimum now.
Purchases by supplier	Purchases, returns, paid and due per supplier.
Expenses	Every expense with category, method and who entered it.
FORECAST	
Sales forecast — next 7 days	Expected sales and orders for each of the next 7 days, based on the same weekday over the last 8 weeks.

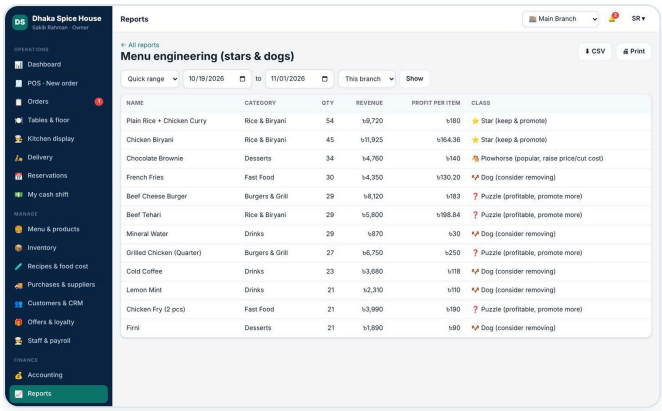

Figure 97 — Menu engineering

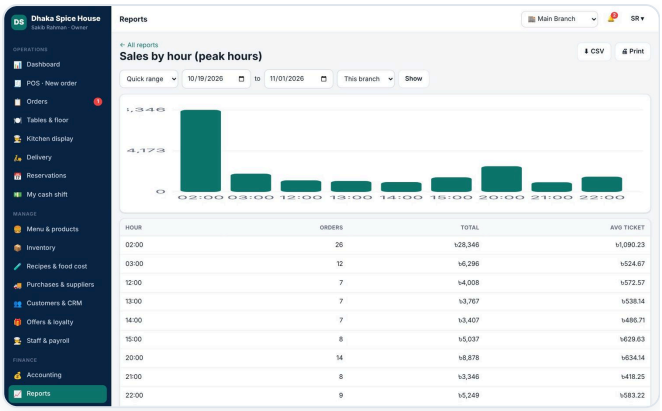

Figure 98 — Sales by hour

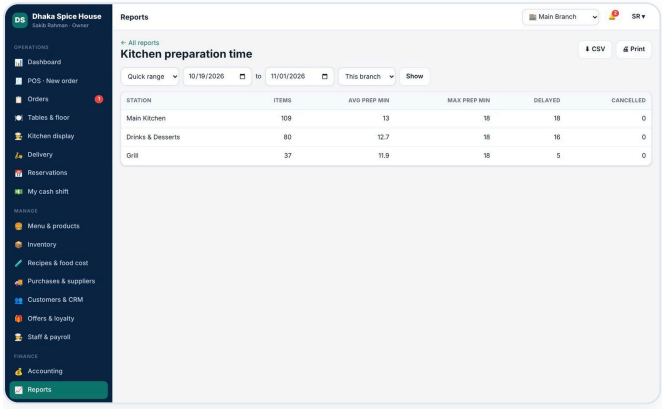

Figure 99 — Kitchen preparation time

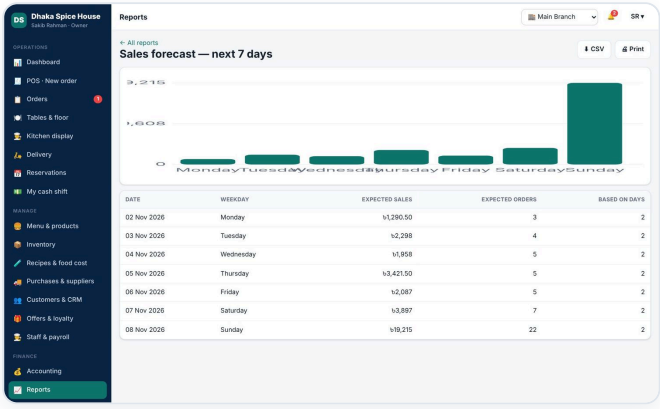

Figure 100 — 7-day sales forecast

21 Branches

Run any number of outlets under one account with central control.

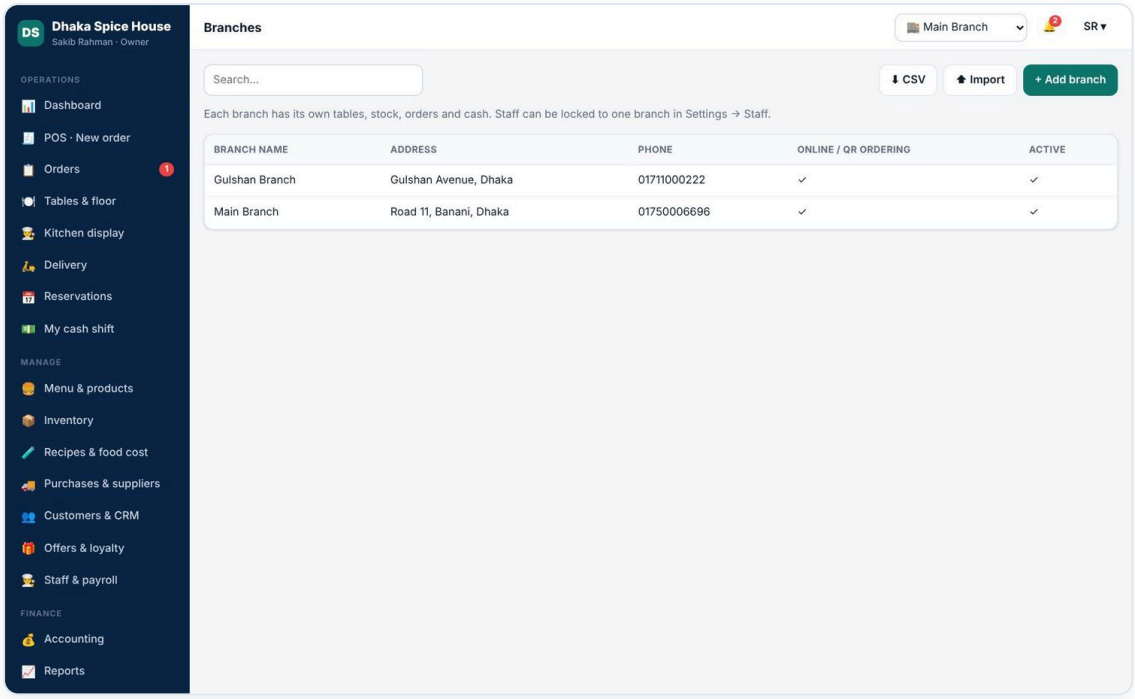

Figure 101 — Branches

- **+ Add branch** — name, address, phone, whether it accepts online / QR orders, and Active.
- Each branch has its own tables, floors, stock, orders, cash shifts, riders, reservations and expenses.
- Menu, categories, customers, suppliers, coupons, staff and roles are shared — with branch-only items and branch prices if needed.
- Switch branch from the top bar. Staff can be locked to one branch.
- See all branches together on the dashboard, stock (central view), orders, accounting and every report; compare them in the Branch comparison report.
- Move stock between branches with Inventory → Branch transfer.

> ℹ️ A branch with orders cannot be deleted — untick **Active** instead. Your account always keeps at least one branch.

22 Settings

Only people with the *Settings, users & roles* permission (owners by default) can open Settings. Every change is recorded in the activity log.

22.1 Restaurant

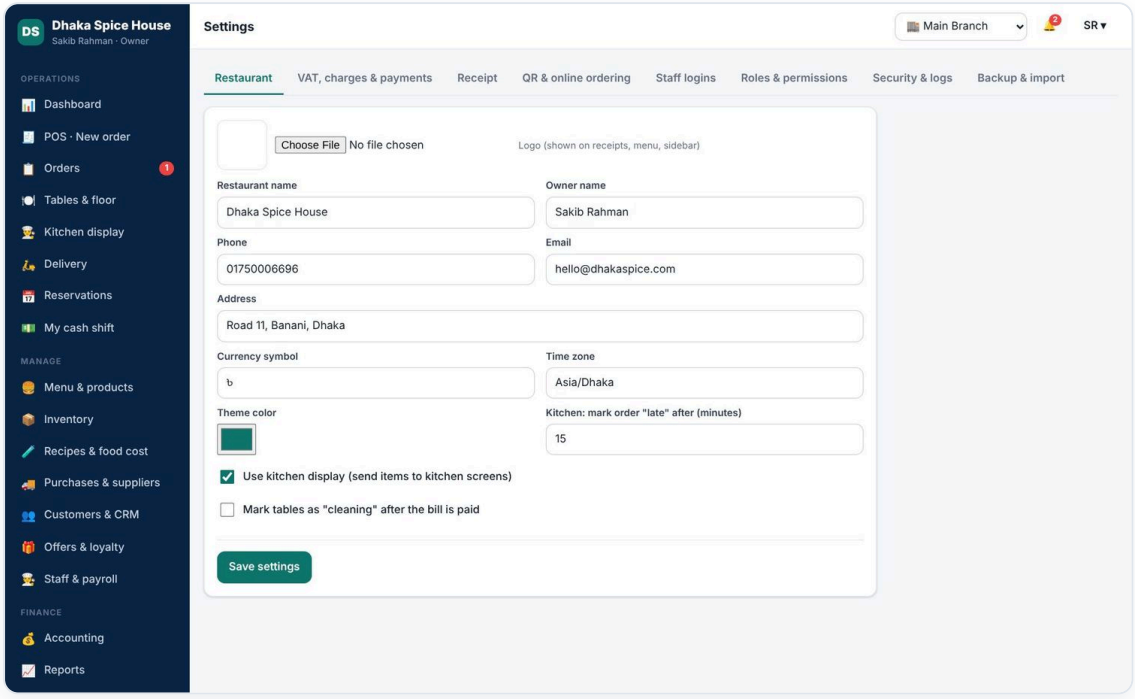

Figure 102 — Settings → Restaurant

SETTING	EFFECT
Logo	Shown on receipts, the online menu, the menu board and the sidebar.
Restaurant name, owner, phone, email, address	Used on receipts and the online menu.
Currency symbol	Default ৳.
Time zone	Default Asia/Dhaka. Controls "today", reports and menu times.
Theme colour	Main colour of your screens and online menu.
Kitchen "late" minutes	When kitchen tickets turn red.
Use kitchen display	Untick if you do not use a kitchen screen.
Mark tables as "cleaning"	After payment, tables turn yellow until marked free.

22.2 VAT, charges & payments

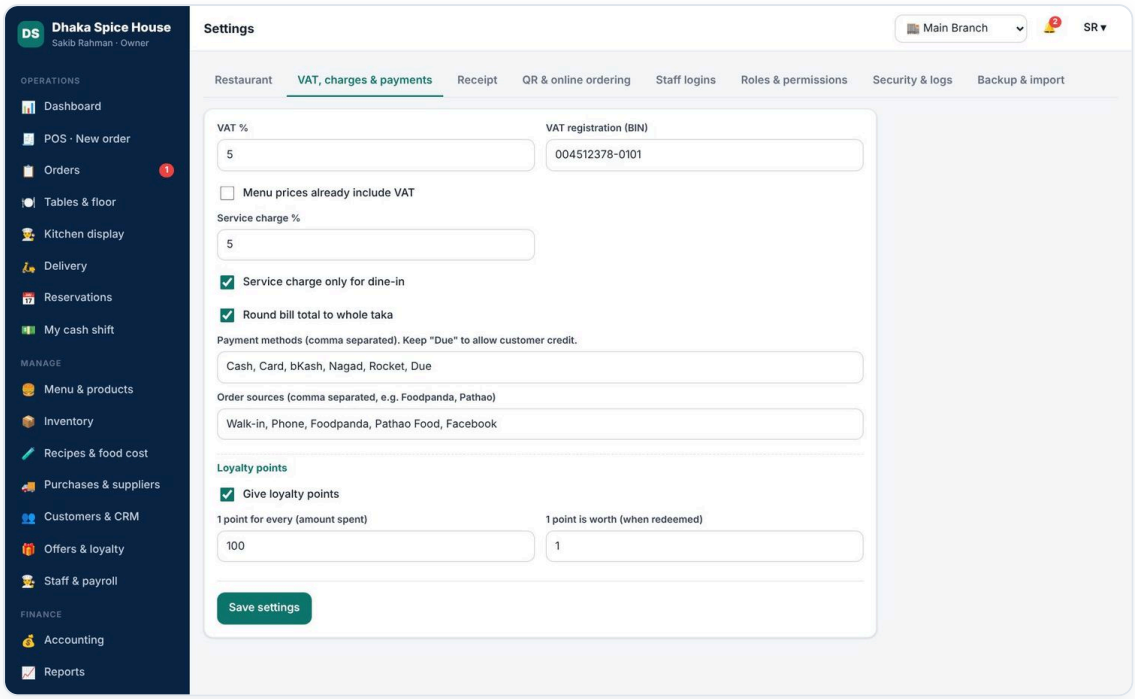

Figure 103 — Settings → VAT, charges & payments

SETTING	EFFECT
VAT %, VAT registration (BIN)	VAT rate on bills; BIN printed on receipts and the VAT report.
Menu prices already include VAT	VAT is shown but not added on top.
Service charge %, dine-in only	Added after discounts.
Round bill total	Totals rounded to whole taka.
Payment methods	Comma-separated list shown in the POS, e.g. `Cash, Card, bKash, Nagad, Rocket, Due`. Cash is always kept. Keep **Due** to allow credit sales.
Order sources	e.g. `Walk-in, Phone, Foodpanda, Pathao Food, Facebook`.
Loyalty points	On/off, points per amount spent, value of one point.

22.3 Receipt

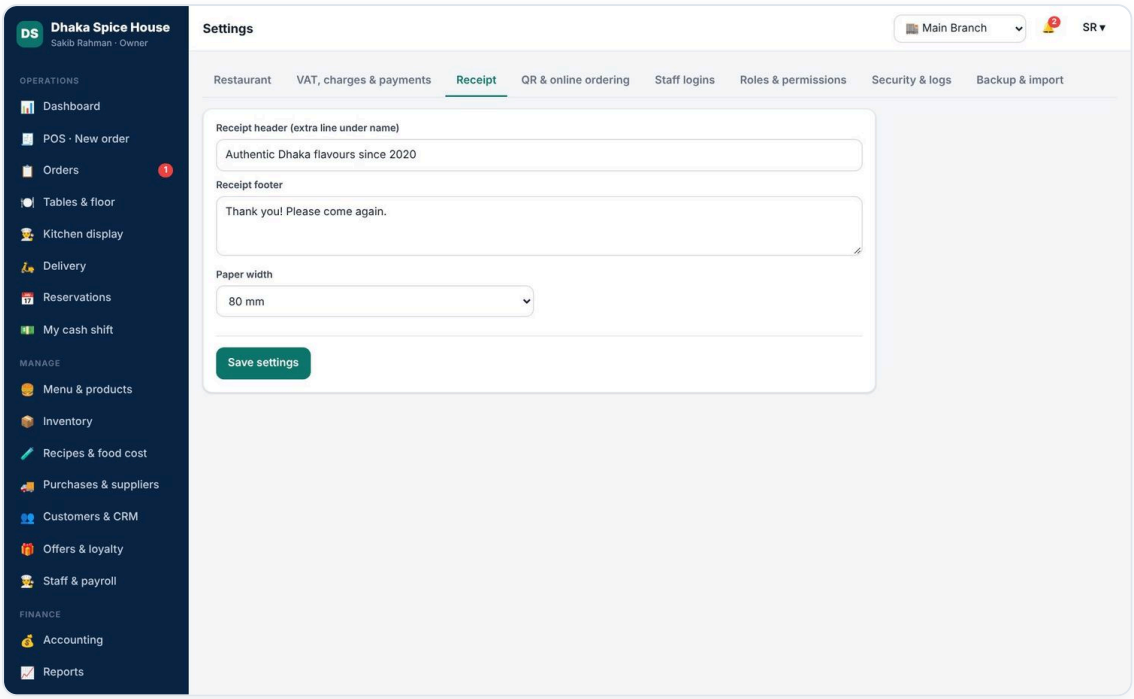

Figure 104 — Settings → Receipt

Header line under your name (e.g. "Authentic Dhaka flavours since 2020"), footer message (e.g. thank-you note, Wi-Fi password, Facebook page), and paper width — **80 mm** or **58 mm**.

22.4 QR & online ordering

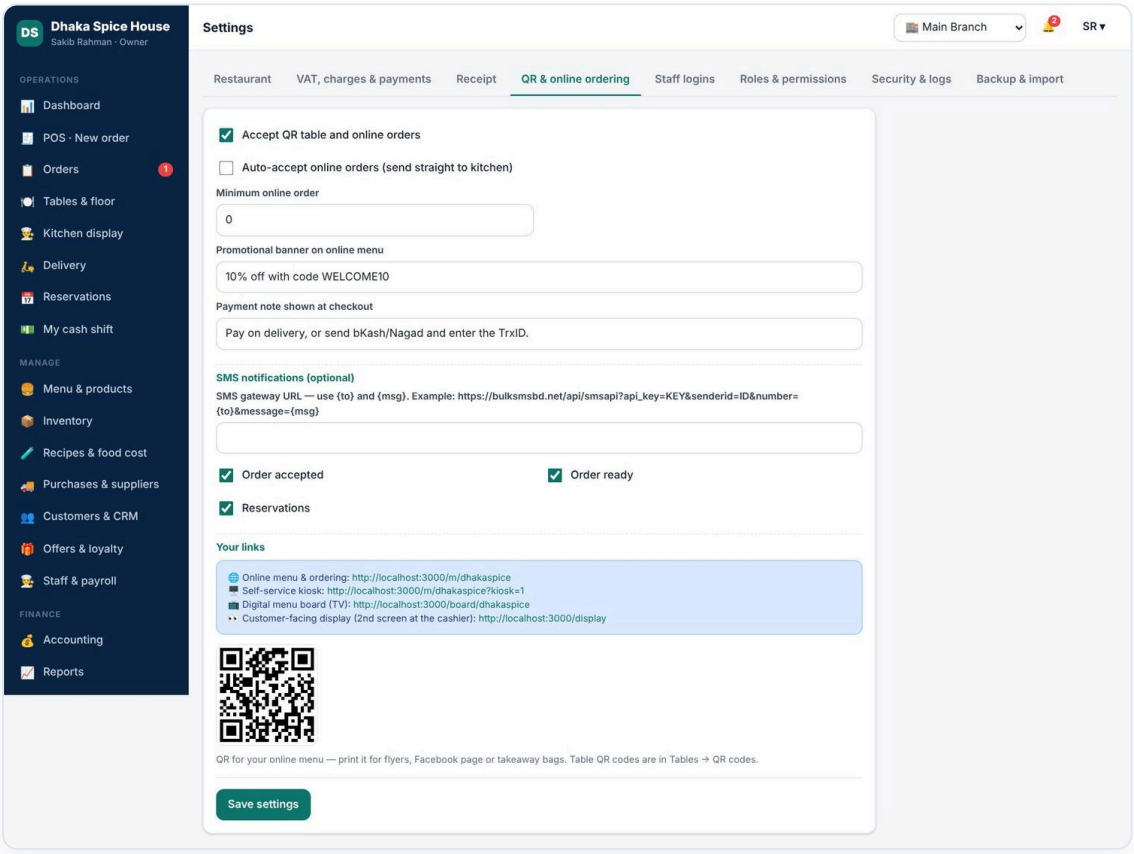

Figure 105 — Settings → QR & online ordering

SETTING	EFFECT
Accept QR table and online orders	Untick to show the menu only (browsing, no ordering).
Auto-accept online orders	Orders go straight to the kitchen without manual acceptance.
Minimum online order	For pickup and delivery (not table QR).
Promotional banner	Yellow message on the online menu and menu board.
Payment note at checkout	Instructions shown to online guests, e.g. bKash number.
SMS gateway URL	Optional. Paste the HTTP link from your SMS provider with `{to}` where the phone number goes and `{msg}` where the message goes. Choose which events send SMS: order accepted, order ready, reservations.
Your links	Online menu link, kiosk link, menu board link and customer display link, plus a QR code for the online menu to print on flyers, bags or your Facebook page.

22.5 Security & logs

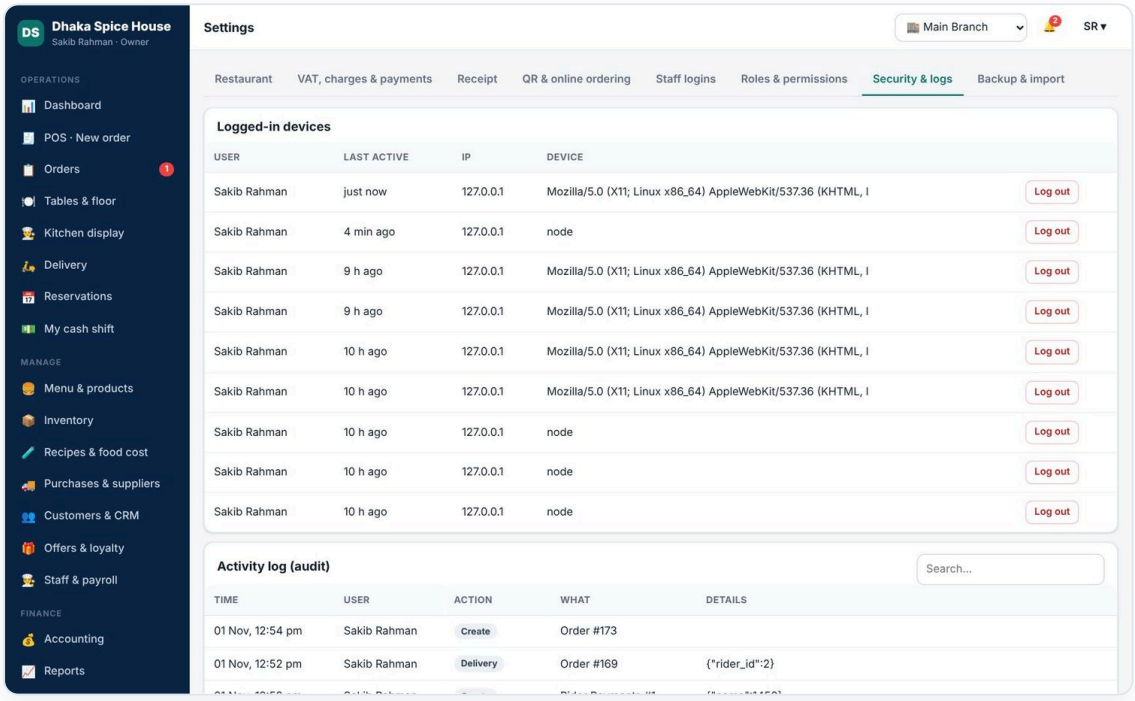

Figure 106 — Settings → Security & logs

- **Logged-in devices** — every active login with user, last activity, IP address and device. Click **Log out** to end a session remotely (for example a lost phone).
- **Activity log (audit)** — who did what and when: orders, voids, refunds, discounts with approval, price and recipe changes, stock movements, settings, staff and role changes. Search by person, action or item.
- **Login history** — every successful and failed login with method (password or PIN) and IP.

22.6 Backup & import

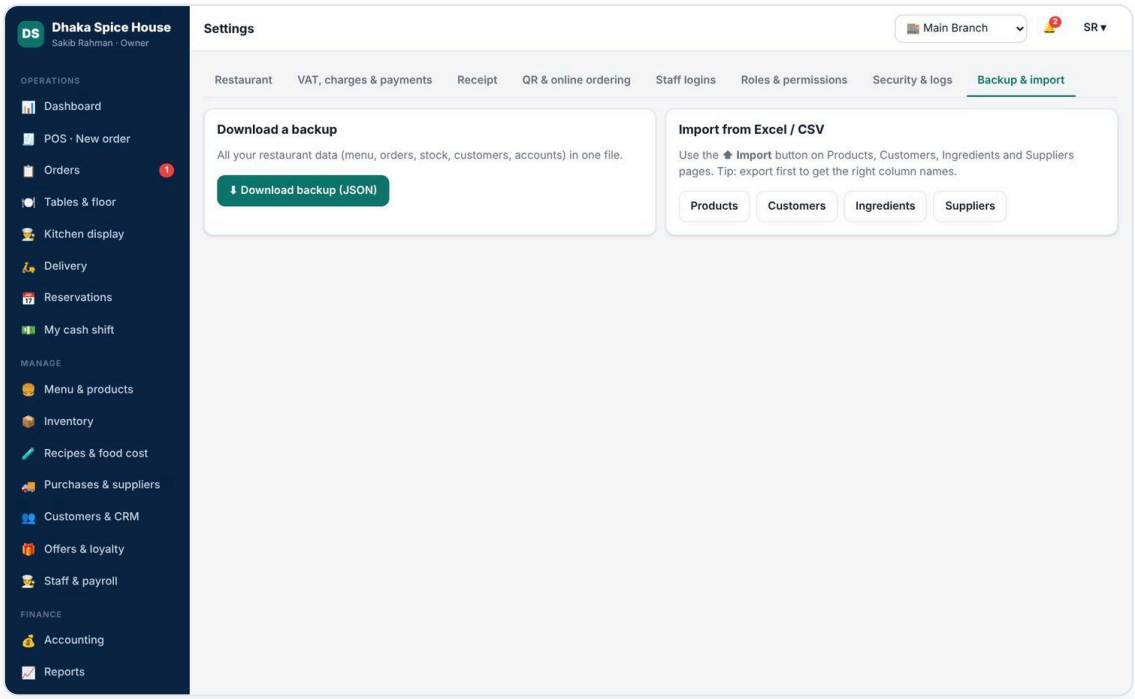

Figure 107 — Settings → Backup & import

⬇ Download backup (JSON) saves all your restaurant data (menu, orders, stock, customers, accounts) in one file. Keep a copy every month. Baybex also backs up the whole system automatically every day. Use the shortcut buttons to import products, customers, ingredients and suppliers from CSV.

Staff logins and roles are described in the chapter *Staff logins, roles & permissions*.

23 Guest-facing features

Your guests can browse your menu, order and pay from their own phones, from a self-service kiosk, and watch your menu on a TV — no app needed.

23.1 QR table ordering

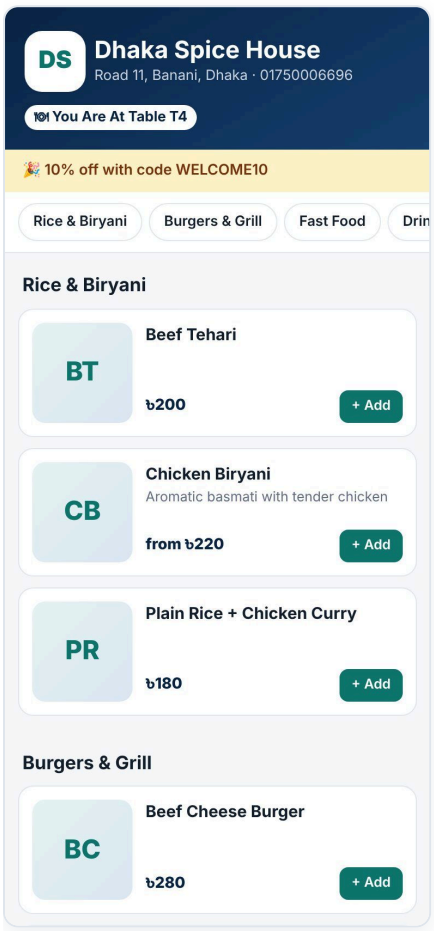

Figure 108 — Menu after scanning a table QR

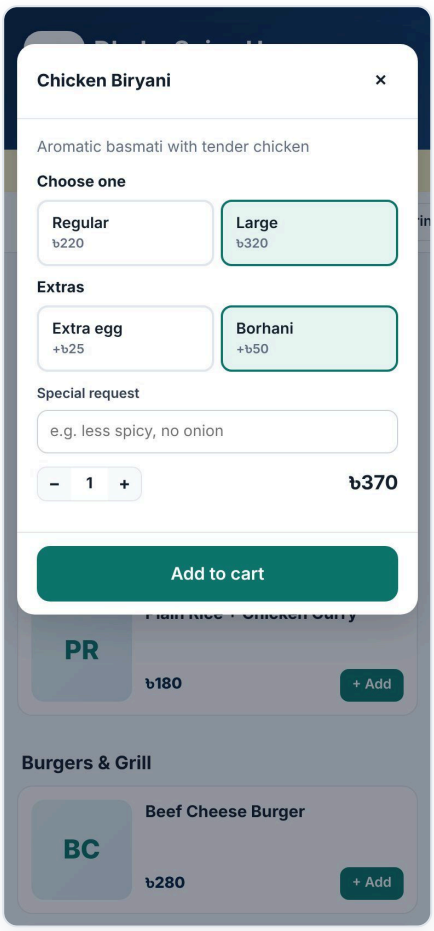

Figure 109 — Choosing size and extras

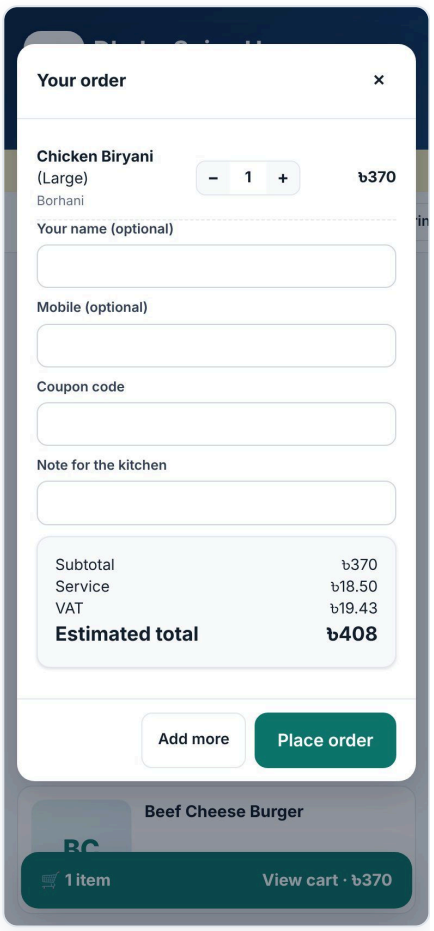

Figure 110 — Cart and place order

1. The guest scans the QR code on the table. The menu opens showing **"You are at table T4"**.
2. They browse by category, tap an item, choose size and extras, add a request and the quantity, and add it to the cart.
3. They open the cart, optionally enter name, phone, coupon and a note for the kitchen, and tap **Place order**. The estimated total includes service charge and VAT.
4. Staff accept the order (or it is accepted automatically) and it goes to the kitchen and onto that table's bill.
5. The guest pays at the table or counter as usual.

23.2 Online ordering (pickup and delivery)

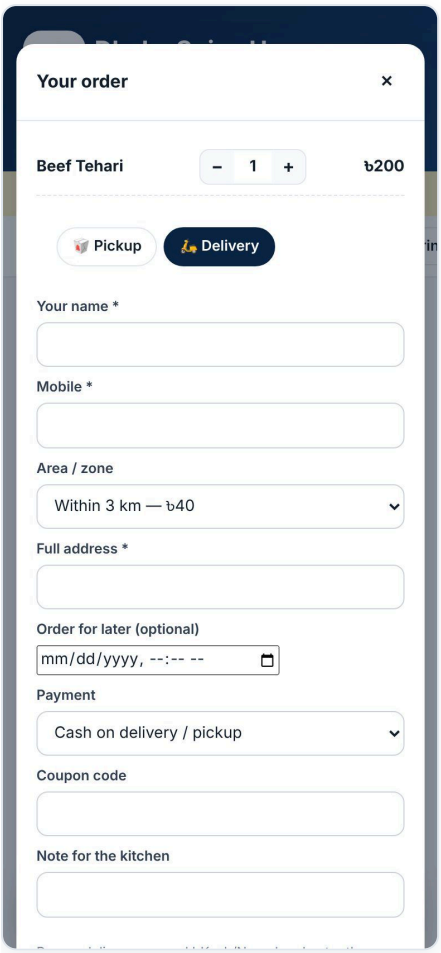

Figure 111 — Online checkout with delivery

Share your online menu link (Settings → QR & online ordering) on Facebook, WhatsApp, Google Maps and flyers. Guests:

- Choose a branch (if you have several).
- Choose **Pickup** or **Delivery** — delivery asks for the area/zone and full address and adds the delivery charge.
- Enter name and mobile (required) and optionally a later time for a **scheduled order**.
- Choose payment — cash on delivery/pickup, or bKash / Nagad etc. with the **Transaction ID**. The TrxID appears on the order for you to check.
- Apply a coupon and add a note.

Their name, phone and address are remembered on their phone for next time. **My orders** lists their recent orders.

23.3 Order tracking

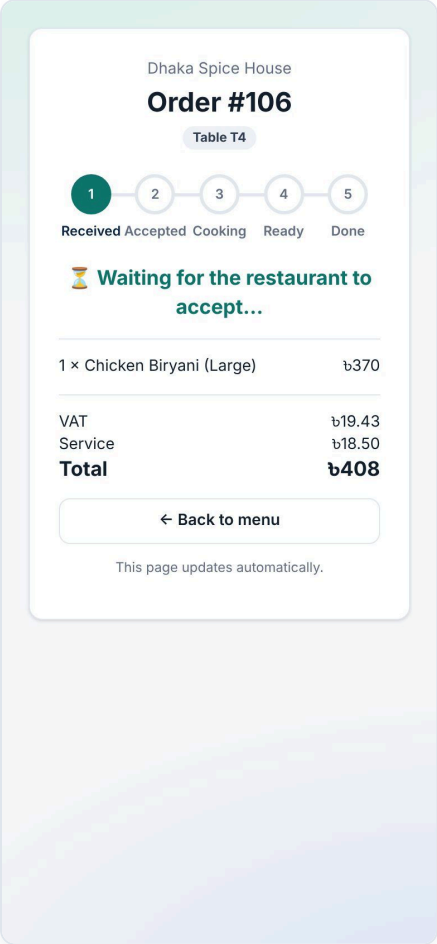

Figure 112 — Tracking page

After ordering, the guest sees a tracking page that updates every 10 seconds: **Received → Accepted → Cooking → Ready / On the way → Done / Delivered**, with the items and total. For deliveries it shows the rider's name and phone. If the order is rejected, the page says so with your phone number. You can copy any order's tracking link from its details (🔗 Tracking link) to send by message.

23.4 Guest feedback

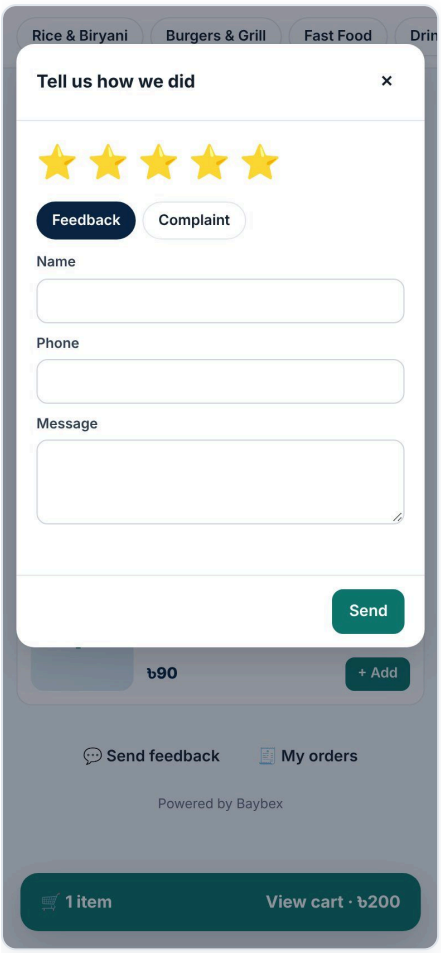

Figure 113 — Feedback form

At the bottom of the menu, **💬 Send feedback** lets guests give 1–5 stars and choose *Feedback* or *Complaint* with their name, phone and message. You receive a notification and it appears in Customers → Feedback & complaints.

23.5 Self-service kiosk

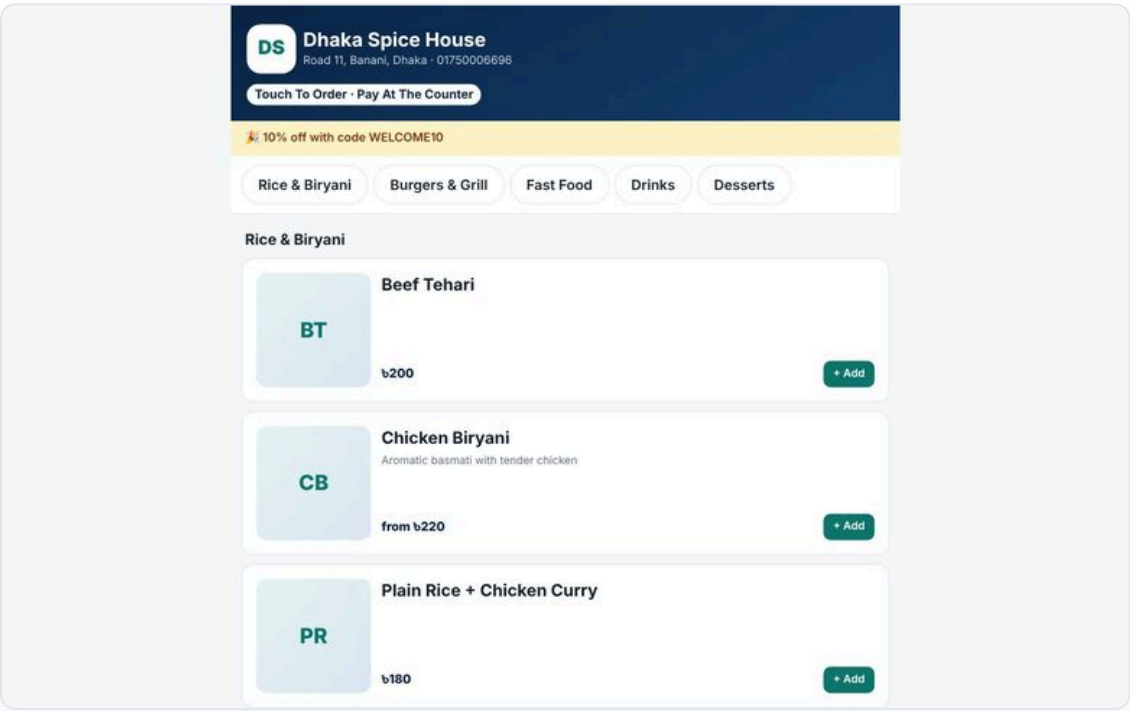

Figure 114 — Kiosk mode

Open the kiosk link (Settings → QR & online ordering) on a touchscreen or tablet at the entrance and put the browser in full-screen. Guests order with bigger buttons, optionally enter a name, and see a large **order number** with the amount to pay at the counter. Kiosk orders go straight to the kitchen. The screen resets for the next guest after 9 seconds.

23.6 Digital menu board

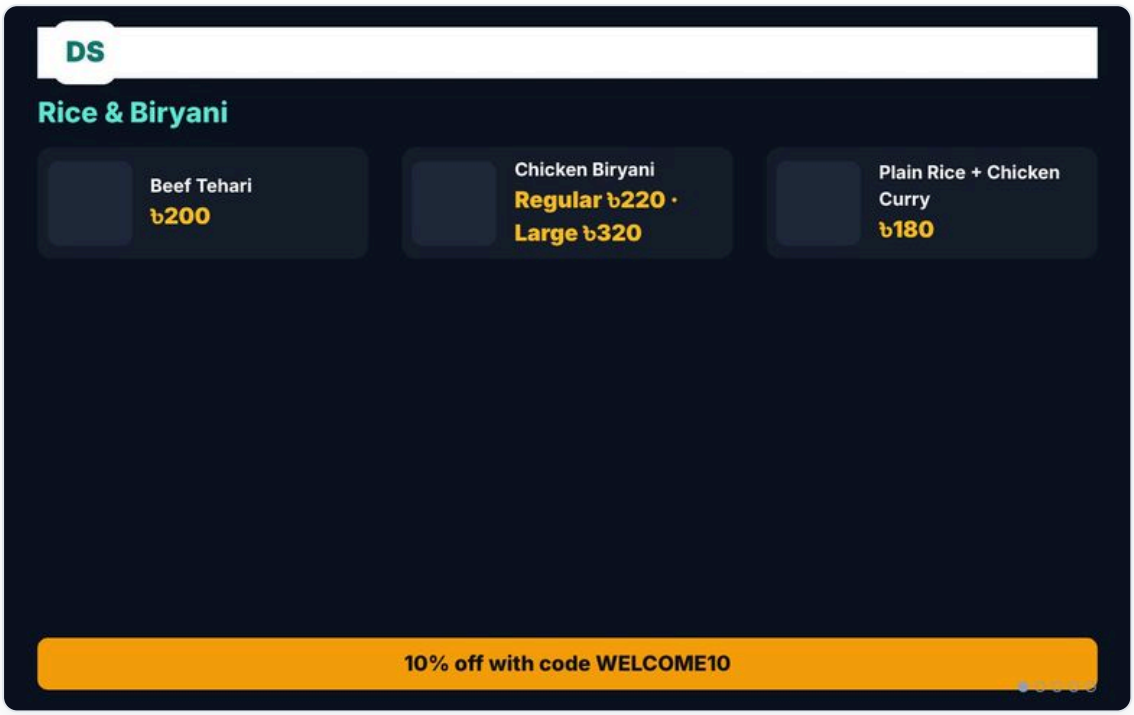

Figure 115 — Menu board on a TV

Open the menu board link on a smart TV or a TV connected to a small PC. It shows your logo, one category at a time with photos and prices (all sizes), and your promotional banner, changing every 10 seconds. Price changes and sold-out items update automatically.

23.7 Customer-facing display

See *POS & billing → Customer-facing display*.

24 Subscription & billing

Your Baybex subscription is managed from the **Subscription** page (owners and people with settings permission).

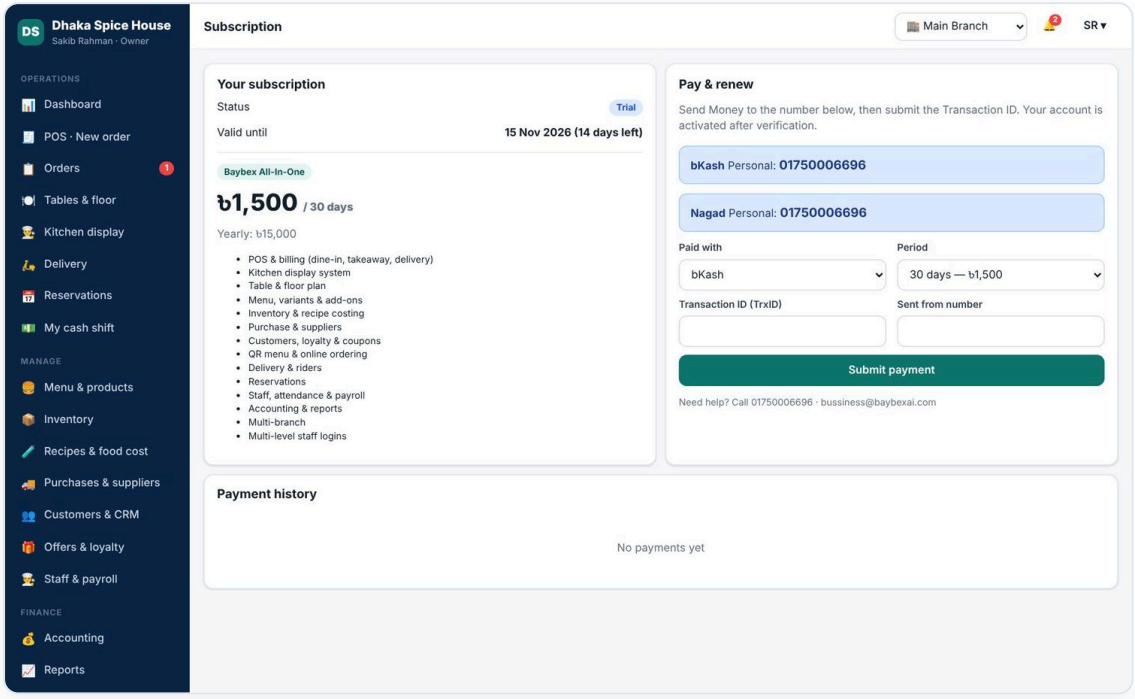

Figure 116 — Subscription page

24.1 Pay and renew

1. Open **Subscription**. You see your status (Trial or Active), the date your access runs until and the days left.
2. Send the plan price by bKash / Nagad (Send Money) to the number shown, or pay by bank or cash.
3. Choose the method and the period (monthly, or yearly if offered), type the **Transaction ID** and the number you sent from, and click **Submit payment**.
4. Baybex checks the payment and extends your subscription. You receive a notification when it is approved (or rejected with a reason). The history at the bottom shows every payment.

24.2 Reminders and expiry

- From 5 days before the end of your trial or subscription, a yellow reminder banner appears on every page.
- If the subscription expires, the system opens only the Subscription page until you renew. **Your data is safe** and everything works again as soon as the payment is approved.
- If your account is suspended, contact Baybex support.

25 Daily routines & role guides

Short checklists for each person. Print this chapter and keep it at the counter and in the kitchen.

☀️ Opening (Manager / Cashier)

1. Log in; check the branch at the top.
2. My cash shift → count drawer → Open shift.
3. Check Dashboard: today's reservations, low stock.
4. Kitchen screen on, station selected, sound on.
5. Turn sold-out items off in Menu (Available = No).
6. Check Orders → Online & QR for early orders.

🌙 Closing (Cashier / Manager)

1. Orders → Running: pay or void every open bill.
2. Delivery: mark all deliveries delivered/failed; collect rider cash.
3. Record today's expenses and wastage.
4. My cash shift → Close shift → count cash → print summary.
5. Mark tables free.
6. Lock / log out on shared computers.

🧾 Cashier

- Open shift before the first sale.
- Choose order type → items → customer → Pay.
- Use split payment for mixed cash/bKash.
- Enter TrxID for bKash/Nagad/card.
- Due only for known customers.
- Close shift and print the summary.

🍽 Waiter

- Log in with your PIN.
- Tables → tap table → New order.
- Add items with instructions → 🔥 Kitchen.
- Watch for "Order ready" notifications and green Ready badges → serve → Mark served.
- Print bill when the guest asks.
- Discount or remove sent items needs a manager PIN.

👨‍🍳 Kitchen

- Choose your station; keep Sound on.
- Start when you begin cooking; tap single items as they finish.
- Ready when all items are done.
- Red header = late; orange border = priority.
- Watch the red Cancelled bar.
- Bump (Served) to clear finished tickets.

📊 Owner / Accountant (weekly)

- Accounting → Profit & loss, Cashbook by method.
- Cash closings: check short/extra.
- Reports → Item-wise sales & Menu engineering.
- Inventory → Expected vs actual; physical count.
- Pay supplier dues; collect customer dues.
- Monthly: payroll summary, VAT report, period closing, backup.

26 Troubleshooting & FAQ

QUESTION / PROBLEM	ANSWER
I forgot my password.	Ask the owner to set a new one in Settings → Staff logins. An owner who forgot their password should contact Baybex support.
"Restaurant ID not found".	Check the spelling of the Restaurant ID (shown in every user's account menu).
"Too many wrong attempts".	Wait 10 minutes, then log in with the correct details.
"This PIN is already used".	Each PIN must be unique. Choose another.
A staff member cannot see a menu item or page.	Their role does not include that permission. Edit the role in Settings → Roles & permissions.
An item shows N/A in the POS.	It is switched off (Available = No), outside its menu time, or not sold in this branch.
The total looks different from the item prices.	Check VAT, service charge, delivery charge, rounding, happy-hour price, branch price and the customer's special discount.
The receipt prints too small / too wide.	Set paper width in Settings → Receipt; in the print window choose the thermal printer, margins None, scale 100%.
Stock did not go down after a sale.	Stock is deducted when the order is **fully paid** and only for items that have a **recipe**.
Food cost shows 0.	Add recipes and make sure ingredients have a cost (record purchases).
Kitchen screen not updating.	Check the internet; reload the page. Make sure the right station is chosen.
No sound for new orders.	Tick Sound on the kitchen screen, unmute the device, and click once anywhere on the page (browsers need one click before playing sound).
Guests' QR orders do not arrive.	Settings → QR & online ordering → Accept orders must be ticked, the branch must allow online ordering, and the subscription must be active. Check Orders → Online & QR.
An old table QR code does not work.	A new code was created for that table. Print the current QR code.
Cannot delete a product, ingredient or branch.	It has history. Untick Active instead.
Cannot merge a bill.	Bills with a payment cannot be merged. Split before taking payment.
"Customer credit limit exceeded".	Collect their due first or raise the limit in the customer profile.
Internet went down during billing.	New paid orders are saved offline and sync automatically. Do not clear browser data.
Only the Subscription page opens.	Your subscription expired. Pay and submit the TrxID; access returns after approval.
How do I move data from Excel?	Export the list as CSV to see the columns, fill your data, and Import.

27 Glossary

TERM	MEANING
Add-on	An optional extra on an item, with its own price.
BIN	Business Identification Number for VAT.
BOGO	Buy one, get one free.
Cashbook	Record of all money in and out.
Due	Amount a customer owes you, or you owe a supplier.
Food cost %	Ingredient cost ÷ selling price × 100.
GRN	Goods Received Note — a purchase whose goods arrived and entered stock.
Held order	An order saved without sending to the kitchen.
KDS	Kitchen Display System.
KOT	Kitchen Order Ticket.
Merge	Combine two or more bills into one.
PO	Purchase Order — an order to a supplier not yet received.
Restaurant ID	Your account's short name, typed at every login.
Shift	A cashier's working period with opening and closing cash.
Split	Divide one bill into separate bills.
Station	A kitchen section with its own display (grill, drinks...).
TrxID	Transaction ID of a bKash, Nagad or other mobile payment.
Variance	Difference between expected (recipe) and actual stock usage.
Variant	A size or version of an item with its own price.
Void	Cancel an unpaid order.
Yield	Usable percentage of an ingredient after trimming or cooking.
